REGISTERED GOOD JERSEYS—Bull and Heifer 3 mos. old. Finely bred and grown.
W. F. McSPARRAN, FURNISS, PA.

Allentown Carlot Imports

DURING 1925 there were 1835 cars of perishable produce unloaded in Allentown as compared to 1776 cars in 1924 and 1625 cars in 1923, according to the figures compiled from the railroad records by the Pennsylvania Bureau of Markets.

The receipts of mixed produce, principally from Philadelphia, show an increase this year of 102 cars over 1924, making a total of 937 of these cars during 1925. The 305 cars of bananas used in Allentown during the year show a 15 per cent increase over the 1924 receipts.

The apple receipts dropped from 85 cars in 1924 to 60 cars in 1925 which would indicate that the Allentown markets absorbed more locally grown apples during the year. Pennsylvania apple shippers supplied one-third of the 60 carloads received in 1925 as compared to only about one-seventh from the same source in the preceding year. Washington, on the other hand, supplied only one-fifteenth of last year's cars of apples as compared to nearly one-third supplied by the western state in 1924.

Fewer Early Potatoes Used

Potato receipts dropped from 111 cars to 80 cars. The entire drop is accounted for in the fewer cars of early potatoes used in Allentown last year when the new potatoes sold considerably higher than in 1924. The receipts of late potatoes were 21 cars each year which indicates that locally grown stock continued to supply the Allentown markets with most of its late potatoes since many of the 21 cars receipts each year were used for seed purposes.

The receipts of the various commodities for the year were as follows: apples 60, bananas 305, cabbage 41, cantaloupes 27, celery 40, cranberries 1, cucumbers 2, grapefruit 4, grapes 125, lettuce 1, mixed produce 937, onions 15, oranges 57, peaches 24, pineapples 1, potatoes 80, strawberries 14, sweet potatoes 35, and watermelons 66 cars.

Johnstown Receipts

RAILROAD records show that Johnstown used 144 fewer carloads of shipped-in produce during 1925 than in 1924 according to the Pennsylvania Bureau of Markets. More than a third of the total carlot receipts of 1701 cars were made up with mixed produce, arriving principally from Pittsburgh. In addition there were 22 different commodities making up solid carloads from 25 states of the Union and from several foreign countries.

Potatoes show the largest receipts of any single commodity with 240 cars, 22 per cent decrease from the 1924 figure. A total of 135 cars of these were late potatoes as compared with 171 cars of northern grown stock received in 1924. From these figures it is apparent that Cambria County farmers are supplying more potatoes to meet the demands of the Johnstown markets.

Banana receipts of 231 cars during the year are an increase of 54 cars over the 1924 arrivals. These cars were received mostly from the Port of New York. Johnstown used 24 more cars of grapes in 1925 than in 1924, this making a total of 186. The receipts from California increased from 112 cars to 162 while the New York state arrivals decreased from 20 to 7 cars. Pennsylvania supplied 7 cars as compared to 6 in 1924. Grapefruit arrivals were 9 cars, altho there had been no solid cars of this fruit used in the city previously. Onion receipts were 29 cars each year.

More Local Fruit in Demand

Supplies of apples dropped from 86 cars in 1924 to 69 in 1925, indicating that local stock supplied more of the demand during the past year. Eighteen cars of Pennsylvania apples were used in the Johnstown markets each year but the receipts from the far western states dropped from 19 cars in 1924 to 7 in 1925. These figures are significant because they show that Pennsylvania and other eastern state growers are better meeting the competition of the western apple on the Johnstown market.

Other commodities to show decreased receipts during the year are lettuce, cabbage, celery, cucumbers, sweet potatoes, cantaloupes, oranges and strawberries.

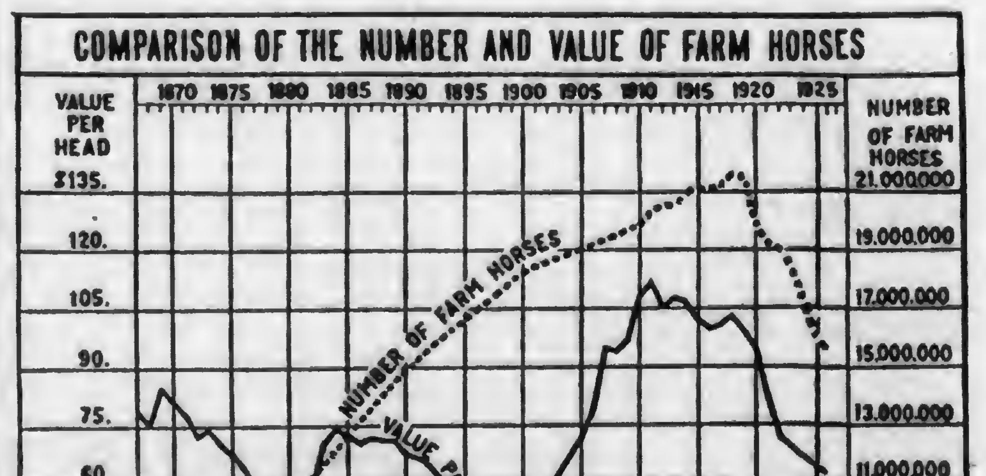
The total unloads for Johnstown in 1925 are as follows: apples 69, bananas 231, cabbage 11, cantaloupes 42, celery 9, cherries 4, cucumbers 4, grapefruit 9, grapes 186, lemons 1, mixed produce 667, onions 29, oranges 49, peaches 40, pears 17, peppers 6, pineapples 1, potatoes 240, strawberries 3, sweet potatoes 8, tomatoes 9, and watermelons 65.

Potato Spraying

POTATO spraying demonstrations have shown rapid increase in popularity in Pennsylvania during the past eight years, according to E. L. Nixon, extension specialist in plant pathology at State College.

Starting with spraying demonstrations in twelve counties in 1918, the work had spread into all but three of the sixty-seven counties in 1924. The acreage sprayed increased from 314 to 38,646 acres and the yield per acre from 142 to 266 bushels in 1925.

When the work first started the potatoes were sprayed five times during the season, but the number of applications has now been increased to seven at an average cost of eleven dollars per acre.—A. L. B.



PUT your horses in shape for spring. Don't let them start the season with minor ailments that might put them out of commission. Get them fit—and keep them fit—with Gombault's Caustic Balsam. Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

MILK IS LUMPY.—I have a cow that was fresh on February 2nd. She has been giving milk that is lumpy, sometimes worse than others. Once in a while there will be no lumps at all. Would appreciate very much if you would tell me what to do for her.—W. B. O., Jersey Shore, Pa. This condition comes as the result of inflammation due to the increased blood supply and to changes incident to freshening or to an infection. Reduce diet by one-quarter to one-half; give one-half to one pound of Epsom salts, and milk the affected part several times daily. The case may easily terminate in loss of parts affected and must be considered seriously.

PIGS NOT THRIFTY.—I have four pigs that I bought in November. One of them is doing fine but the other three are stiff, can hardly get up to eat and have a cough. All I fed was sweet separated milk and corn. When they eat they seem to choke as if they could hardly swallow. Do you think we get them too fat? We keep them dry.—H. L. S., Erie, Pa. A good diet for growing pigs consists of 100 pounds corn, 10 pounds digester meat and bone tankage, 5 pounds oil meal and 5 pounds ground alfalfa. One should consider parasites and eliminate them as a possible complication. The pigs should have an exercise lot and be exposed to direct sunlight.

DIARRHEA IN HORSE.—Have a horse about fifteen years old, which has loose bowels. I feed alfalfa, timothy hay and corn. Of late feed only timothy hay and corn but he isn't better. Please advise me what to give. He is in good flesh and health. A. S., Freehold, N. J. Diarrhea usually follows ingestion of moldy foods; foods poor in quality; irregular feeding and watering and foreign bodies that irritate the wall of the intestines. One should first withhold food and give one pint to one quart of raw linseed oil. You would do well to have a consultation with your veterinarian on this case. Treatment depends on the factors causing the trouble.

GARGET.—A Holstein cow, for I presume two months or more, has been giving clots of thick milk, perhaps a good teaspoonful each milking. In every other way she seems in good health. Udder has not been swollen until just recently. Have been feeding silage, alfalfa hay, and ration of corn, oats and cottonseed meal. She was getting about three pounds, not over, of the cottonseed daily but have reduced her grain ration.—W. B., Kirkwood, Pa. These cases usually appear as the result of an infection. This cow should be kept separate from the herd and milked last. The hands of the milker should be washed in an antiseptic solution before and after milking. This is done for the purpose of preventing the spread of the infection. The diet may be cut down and one-half to one pound of Epsom salts given as a drench. Milking the cow three or four times per day is sometimes of value.

HORSE RUBS HIS TAIL.—I have a horse that rubs his neck and root of tail. Seems to be very itchy. Can you tell me what to do for it?—J. S. G., Scenery Hills, Pa. It is always well to examine for lice as many cases of rubbing are due to this cause. It may be, however, that the skin is irritated and needs grooming or the horse needs more exercise. Wash the parts with soap and water to insure cleanliness. If lice is the cause, apply a two-per-cent solution of one of the coal tar dips, repeating in seven days. If no lice are present, apply vaseline to the part after washing, rubbing it well into the hair.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

WANTED—Farmer agents and prospective buyers write for illustrated catalog and terms on Celebrated International Silo with automatic-take-up-hoops. International Silo Co., Meadville, Pa.

SALESMEN—To sell a well known Mineral feed, big opportunity, chance for advancement to district managers. C. W. Buck, Ridgway Hotel, Camden, N. J.

WE PAY $200 Monthly Salary, furnish car and expenses to introduce our guaranteed poultry and stock powders, cleaner, etc. Bigler Company X-718, Springfield, Ill.

More profit *from your crop investments*

You invest money in land, time, stock, equipment and seed with the idea that they will bring you more money.

Safeguard these investments by using the right fertilizer. You know you have the right fertilizer if you use Red Steer.

Red Steer Fertilizers are made right because they have been carefully and accurately made to a definite standard of quality.

Years of careful study and experimenting by Agricultural Experiment Stations has developed valuable information as to the kinds and amounts of plantfood best suited to the soils and crops in their states.

Swift & Company's fertilizer experts have taken these results, added their own knowledge to arrive at their recommendations and, with the best of material, careful processing and mixing, have made Red Steer Fertilizers.

Know that your fertilizer is right

Red Steer Fertilizers are right because they are thoroughly processed and cured, reaching you in good drilling condition. They assure you the full benefit of every pound of plantfood they contain.

They are right because the Swift factory is equipped with modern manufacturing and laboratory facilities and operated by experts of long experience.

See the A. S. A.

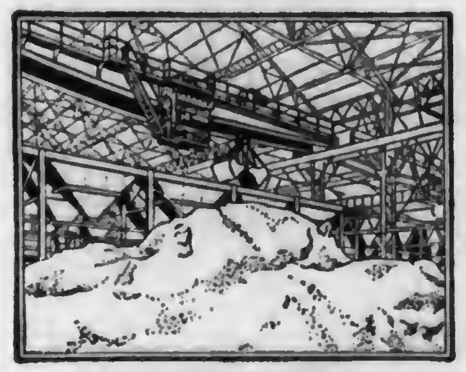
Put your farm on a business basis. Get the right fertilizer, Red Steer.

Near you is the A. S. A. (Authorized Swift Agent). He can give you valuable information on profitable farming methods and improved fertilizer practices. He can show you how to cut your fertilizer costs by using a more liberal application of Red Steer Fertilizer of high analysis.

Go to see him. Look for the sign that marks his place of business—the sign of Quality and Service.

Swift & Company
Fertilizer Works, Dept. 13
BALTIMORE, MD. CLEVELAND, O.
HAMMOND, IND.

Swift & Company maintains a large staff of expert chemists, practical agriculturists and experienced factory men to produce fertilizers that will give you the best results in crops and profits



It takes months to cure fertilizer properly. After thorough mixing by special machinery, Red Steer Fertilizers are piled away to cure. Months later, the hard mass is broken up, reground and reprocessed. They are thoroughly cured fertilizers and will not cake again

Swift's Red Steer Fertilizers

"It Pays to Use Them"

Fertilizers for Pennsylvania

The Pennsylvania Agricultural experiment Station, after years of research and actual field experiments, has selected the following analyses of fertilizers for their soils and crops:

Corn. No manure or clover sod, poor soil, 2-12-4, 3-10-6. Medium soil, 0-12-6; rich soil, 0-16-0; with manure or clover sod, poor soil 2-12-4, 0-16-0. Medium or rich soils, 0-16-0.

Potatoes. No manure or clover sod, poor soils, 3-10-6; medium soils 2-12-4, 3-10-6. Rich soils, 2-12-4. With manure or clover sod, poor soils 3-10-6, 2-12-4; medium soils, 2-12-4; rich soils 0-16-0.

Vegetables (leaf crops). No manure or clover sod, medium or rich soils, 6-8-4, 4-8-4; with manure or clover sod, medium soils 4-12-4, 4-12-0; rich soils, 4-12-4, 4-12-0, 0-16-0.

Tomatos, peppers, cucumbers, melons, egg plant. No manure or clover sod, all soils, 6-8-4, 4-8-4; with manure or clover sod, poor or medium soils, 4-12-4, rich soils 4-12-4, 4-12-0, 0-16-0.

Vegetables (root crops). No manure or clover sod, poor soils, 5-10-5, 4-8-6. Medium soils, 4-12-4, 4-8-6; rich soils, 4-12-4. With manure or clover sod, poor soils, 5-10-5, 4-12-4; medium soils 4-12-4, 2-12-4; rich soils 3-8-3, 0-16-0.

As Authorized Swift Agent we are co-operating with the Pennsylvania Experiment Station in recommending and selling these analyses.

Come in and we will help you select the analysis and amount you need.

This Buick Fleet is Dedicated *to* Wear

No owner gives his car in years, the punishment the Buick test fleet takes in weeks.

Fifteen, and sometimes twenty Buicks line up for inspection by the heads of the Buick engineering and experimental department each working morning of the year. This is the Buick "squadron of wear." In the previous twenty-four hours each of them has added from 300 to 500 miles to the mileage on its speedometer.

Day and night these cars go. Not on the highways where sustained speed is impossible, but on the roadways of the great General Motors Proving Ground. Here every highway condition is provided; hills, curves, straightaways, gravel, pavement.

Sometimes, when Buick engineers desire particular information as to performance in different parts of the country, the Buick fleet goes where the condition required is to be found. In discovering the best air cleaner to keep dust and grit out of the Buick engine, for instance, Buick cars sought those parts of the country where the roads were very dusty and where the dust contains the most grit.

Buick engineering believes in accuracy. Test, not guess, is the basis for certainty. An improvement suggested is adopted only when the test cars prove its value.

Day after day, year after year, they drive on and on—5,000 miles a day, 1,500,000 miles a year, these cars total in their search for wear. This, that every Buick may be an example of how well a motor car can be built.

Research in the practical laboratory of the road is one big reason why Buick leads in motor car advancement. 5,000 miles a day, devoted to wear, means *Better Buicks.*

Top-Dressing Pays Good Returns

Experiments Prove Value of Commercial Fertilizers on Meadows and Pastures

By C. R. WOODWARD

APPLICATIONS of nitrate of soda as high as 360 pounds per acre, with moderate amounts of acid phosphate and potash, gave profitable increases in the yield of mixed hay in experiments extending over nineteen years at the Rhode Island Agricultural Experiment Station.

The experiments, which are reported in Bulletin 185 of the Rhode Island Station, were conducted on three plats of a silt loam soil with a gravelly subsoil. One received no nitrogenous fertilizer, one a medium amount, and the third a heavy application each year. The plats were in hay continuously from 1899 to 1906, and subsequently have grown a rotation of corn one or two years, potatoes one year, rye one year, and hay two or three years. All plats received the same amounts of phosphoric acid and potash each respective year, so the only variable was the amount of nitrogen.

Yields from Different Applications

For eleven years, fertilizer containing 140 pounds of nitrate of soda gave an average yield of 2.72 tons of hay to the acre, 420 pounds gave 4.05 tons, while the plat which received phosphoric acid and potash alone yielded only 1.97 tons.

An application containing 233 pounds of nitrate of soda in 1916 gave a yield of 5.85 tons, and 313 pounds gave 5.64 tons. The next year the yield was 4.13 tons from 360 pounds of nitrate, or 2.58 tons more than from the plat receiving no nitrogen, which yielded only 1.55 tons. An application containing 487 pounds of nitrate gave a somewhat larger increase, but the difference was not great.

The Michigan Agricultural Experiment Station, in Circular Bulletin No. 53, recommends the use of high-analysis fertilizer for hay and pasture as well as for other crops. For timothy the authors report that most satisfactory results have been obtained from top-dressings of nitrate of soda. For permanent pasture a 4-12-0 mixture or nitrate of soda alone is recommended.

On soils of moderate fertility, then, if we may judge from the experience of experiment stations and of individual farmers as well, a liberal amount of good fertilizer, high in nitrogen and with a fair proportion of phosphoric acid, will generally pay good returns.

Usually some lime will be needed. In a four or five-year rotation, a ton of ground limestone may be broadcast and harrowed in before seeding, or before sowing the fall grain if the hay is seeded in the grain.

The spinach at the left was unfertilized and yielded 198 crates per acre. The rows at the right had 1600 pounds of a 9-8-3 fertilizer at planting and yielded 507 crates per acre. Photos taken on the New Jersey Experiment Station plots at Richfield, N. J.

The Top-Dressing for Hay

A good top-dressing for hay would consist of 100 to 250 pounds per acre of nitrate of soda, and 150 to 250 pounds of acid phosphate. Wherever there is a good stand of clover, the smaller amount of nitrate might be adequate; for a weak stand, or for the second year in sod, larger amounts are advised. The top-dressing should be applied as soon as the ground dries out in the spring, but before the grass makes much growth.

The Women Have the First Word

It Seems That Farm Husbands Do Many Things Their Wives Wish They Wouldn't

A Dozen Wishes

Awarded Prize of Five Dollars

I WISH my husband wouldn't:

1. Snore when he sleeps.
2. Leave me alone while he plays cards at Lem Haskin's store.
3. Always tell me what a saving wife Jerry Todd got.
4. Tell all winter what he'll do when summer comes, and then do nothing he planned.
5. Make veal calves of those I want to raise for cows.
6. Take my tea kettle full of hot water to the barn to fill our auto radiator, and then leave it there until I have to get it myself.
7. Keep silent while he eats a delicious pudding which I learned how to make at the farm bureau meeting.
8. Refuse to argue or talk back when I have a great many "good points" to be exploded.
9. Bite his finger nails when company is present.
10. Insist on wearing a soiled shirt to parties.
11. Take a needle threaded with white thread and pretend to start sewing buttons on his black suit.
12. Etc.—Susie Sly.

Mrs. Cuts the Wood

TO BEGIN with, I live with my husband's people. He has promised so many times to take me to housekeeping, and after raising my hopes, makes some excuses about it and makes me despondent again.

I wish he'd cut the wood instead of letting me do it.

He curses because the buttonholes in his shirt stick when they are starched and ironed.

He is always ready to curse me for every least little thing, which will gradually turn love to hate.

He never hurts himself to do me a favor, but curses if I don't fly around and wait on him.

When he comes home he just sits down, and doesn't notice me any more than he would a servant girl.

Oh, well, it's pretty tough, but I suppose lots have it tougher.—F. S.

He Sticks to His Overalls

FIRST and foremost it must be understood that I am not finding fault with my husband in these lines I am writing, because I love him dearly and can imagine none other in his place.

The thing I wish most of all my husband would not do is always wear in the house the same old nasty, smelly clothes he wears in the barn. He objects to having his overalls washed and wears them months. They decorate his person on Sundays and every other time unless we are going out. And oh! oh! The odor when warming himself over the register is simply exquisite (?).

And then those whiskers, always a week's growth, and often more, a nice black crop of brush,—never time to shave. Sometimes I think I shall never have time to comb my hair again, and see how he admires a frowsy-looking table companion.

Perhaps, tho, the reaction of feeling which comes to me when we are out and he is sleek and clean, makes up for my ordinary feelings, for it then seems to me I can hardly keep my eyes from him, so good does he look to me.

I do not think a man realizes how a woman feels about these things, or what cleanliness and tidiness about his person means to her, to say nothing of the influence on his growing children, or he would be more careful of his appearance.

It is hard to obtain the desired result when you lecture Bobby on how much personal appearance counts for and against him, when Dad, the hundred-per-cent perfect specimen, looks pretty "messy" all the time.

These are not serious, but they are the things I wish my husband would not do.—Ruth.

She Gives Him Fair Warning

THE alarm clock rings at 5:30 each morning, but my husband never hears it, so I poke him in the ribs and say, "It's time to get up." He says "Ugh," then turns over and starts to "saw logs" again. After I call him six or a dozen times more he finally crawls out and gets dressed. I wish he would not depend on me to call him seven times before he will get up.

When he starts the kitchen fire I wish he would not spill ashes on the floor, and track them all over the kitchen; but if he must spill ashes, I wish he would do it the day before I scrub the floor instead of the day after.

"I wish he wouldn't yell like that"

I always get the separator ready for him and put the rinse water on the table beside the separator. But when I happen to forget the water he never notices it until he has almost finished separating, and then, no matter who is calling or visiting he yells, "WATER! WA-A-A-TER!! WA-A-A-A-TER!!!" at the top of his voice until the tea kettle is in his hand. The louder and longer he yells the more I rush, and I wish to goodness he wouldn't yell like that. If he doesn't stop, one of these days I'll pour some down his neck.

I wish he wouldn't hang his coat on the dining-room floor, and his mittens on the piano.

When he is repairing machinery I wish he wouldn't bring bolts and nails and singletree clips, etc., into the living room and put them on top of the writing desk.

"It isn't the fact that you're hurt that counts, but only, how did you take it."—Edmund Vance Cook.

Wise Spending

A FOREIGN visitor to this country recently expressed his surprise at the ease with which Americans earned money, but that he was even more surprised to see how little they knew about spending it wisely.

The real reason why this generation knows so little about spending money wisely is because it has had no need to learn. For some time, money has been so easy to acquire and the future has looked so rosy that there has been no necessity (so they think) for people to "take thought for the morrow." This is especially true of the generation which has come into earning power within the last ten years. It has not yet passed thru a period of hard times. Even the last "panic" is outside the practical knowledge of the present generation of young people. But their parents and grandparents could a tale unfold if they thought it of any use.

Farm Legislation

A GREAT deal of discussion is going on in eastern daily papers about the so-called farm bills in Congress. The farmers of the East are not giving a great amount of thought to the measures, chiefly because the bills relate to the disposal of crops which are not exported from eastern farms. A very large number of bills has been offered, all purporting to stabilize prices and take care of the surplus problem. However different they are in text they may be divided into three general classes. First, those which would require the government to take a part in the disposal of the surplus products which are supposed to cause low price troubles. Second, those that would place the moral and financial support of the government back of organizations of farmers who are trying to help themselves. Third, those that would merely extend government aid in the form of advice and counsel from the Department of Agriculture and the Department of Commerce. The bills under the first grouping are said to stand little chance of passing. Some of those under the third have the backing of the administration and will likely be written into law.

Husbands' Faults

WE BELIEVE that it was Robert Burns who wrote the wish that people had the power to see themselves as others see them. As the next best thing to such ability we publish this week some of the letters written by wives in response to our request for articles asking them to tell what they wish their husbands would not do. They will make good reading for all husbands, for all husbands are mortal and prone to have faults. But let not the wives think that husbands have a monopoly of the faults of the world. Next week we shall show that women have some short-comings, as revealed in the answer to a similar request made to husbands.

Every answer is interesting because it is so human and conveys to the reader intimate facts which he or she finds to be counterparts of personal experience. They reveal causes of irritations which, if allowed to grow, cause shipwreck of marriage relations only too often. While we may get some enjoyment out of reading them we should at the same time resolve to curb our own impatience while trying to help others to overcome their faults.

Excessive Optimism

ACCORDING to the United States Weather Bureau the last two years have seen unusually heavy losses from storms. More than 850 people lost their lives in the 115 tornadoes that were reported to the Weather Bureau during 1925. Most of these deaths were caused by seven tornadoes which swept several localities on March 18, 1925.

The inhabitants of regions which suffer most frequently from storm damage seem to have developed that spirit of indifference, or bravado, which characterizes those who build their homes on the sides of smoking volcanoes and erect cities on ground that is shaken by earthquakes almost daily.

The other day we said to a man from the tornado belt, "I understand you have quite a few tornadoes out where you live."

"No," he said, "We never have tornadoes where I live."

"But I thought you lived right in the heart of the tornado belt!"

"Oh," he replied, "I often have seen tornadoes go by, ten or fifteen miles away, but we never have them on our place."

That kind of optimism can be excused,—if the man carries tornado insurance on his property. Likewise, the optimism of the man who thinks his barn or house never will catch fire is justified only if he is protected by fire insurance. No business is being operated in a business-like way unless it is protected by adequate insurance on the lives and property of the owners.

Tornado insurance isn't considered necessary in the East, but interest is growing in the insurance of crops against hail and wind damage, which is as it should be.

Butter and Potatoes

WE DON'T know whether to think there is comfort or discouragement for dairymen in the statement of the National Dairy Council that the butter producer gets a larger share of the consumer's dollar than any other class of farmer. Says the Council: "During the past year the farmer has received from seventy-eight to eighty cents out of every consumer's butter dollar, while he averaged only forty-five cents from meat, potatoes and wheat, three other staples of life."

The butter producing farmer may be elated over the marketing system that has reduced the expense of butter distribution to so low a point. Or he may be dejected to think that, if he makes more money, he will have to do it principally by cutting his production costs. The other fellow can cut production costs and he also can reduce distribution costs, thus having two ways to increase his revenue.

However, the butter producer and the wheat and potato producer usually is one and the same person in this territory, which eliminates the danger of any class feeling being engendered by the Dairy Council's announcement.

They Are Off!

PENNSYLVANIANS are promised plenty of political entertainment for the next few weeks. A three-ring circus has been set up and will be conducted night and day until May 18th. The managers of each ring will make every effort to gain popular approval, and it will be an unusual exhibition in a state which heretofore has had its United States senator hand-picked and delivered with little trouble to the voters.

The present candidates are Senator George Wharton Pepper, who has represented Pennsylvania in the United States Senate the last four years; Gifford Pinchot, present Governor of Pennsylvania, and William S. Vare, a Representative in Congress from Philadelphia. We withhold comment on the merits of the respective candidates at the present time, suggesting only that voters keep calm and try to analyze the situation intelligently, and turn out 100 per cent strong at the primary election to vote as conscience dictates.

Poor Fruit Affects Market

LONDON representatives of the United States Department of Agriculture report that New York and New England apple growers have been reducing the demand for American apples in England by shipping poor stuff. "Foreigners" in certain sections of Pennsylvania are said to be willing to pay almost as high prices for orchard-run fruit as for the kind that is carefully graded and packed. However, the kind of "foreigners" who buy apples in London are not so indifferent. The heavy discounts at which many eastern Baldwins and Ben Davis apples have been sold in London indicate the attitude of the English market toward inferior fruit.

Washington Letter

PLAN TO LEASE MUSCLE SHOALS.—A forward step in the settlement of the Muscle Shoals problem was made when the Senate accepted the House amendments to the resolution authorizing the appointment of a joint congressional committee to negotiate a lease of the nitrate and power plants at Muscle Shoals, Ala. A House amendment provides that any lease negotiated by the committee shall safeguard the production of nitrates and other fertilizer materials.

LAKES-TO-SEA AGITATION.—The Great Lakes to tidewater ship canal problem is again pushing to the front for congressional consideration. There are three propositions, each having some merit and strong supporters in and out of Congress. The St. Lawrence River route thru Canada is favored by a strong Middle West group. It is opposed by eastern interests both in the United States and in Canada, and by army and navy officials who insist that national protection and defense should be considered in deciding this issue.

Both of the other plans are for all American routes. One is the federal development of the New York state barge canal, and the other the Bowen plan, which requires only a federal charter, the corporation to provide free use of the canal, their income coming from the sale of hydro-electric power.

WE EAT MORE ICE CREAM.—The consumption of ice cream in the United States has increased enormously within the last five years. In 1910 it was 1.04 gallons a year per person. In 1925 it was 2.8 gallons per person, according to the Department of Agriculture. The total quantity of ice cream consumed last year is estimated at 322,729,000 gallons, compared with 260,000,000 gallons in 1920.

RELIEF COMMITTEE TRIES AGAIN.—The farm relief committee of twenty-two from the Corn Belt States, having failed to agree on the original Dickinson bill and one or two later proposals for disposal of the agricultural surplus, in cooperation with the American Farm Bureau Federation representatives, have drafted a new bill which is the culmination of weeks of effort on the part of the Middle West delegates to agree on a concrete measure.

This new bill would establish a Federal Farm Advisory Council of sixty members to be elected by the farm and cooperative organizations, and to meet in Washington at least twice each year. The council is to select a list of thirty-six individuals, from which the President is to appoint twelve members of a Federal Farm Board to be established in the Department of Agriculture, one member from each of the twelve federal land bank districts.

PROVIDES EQUALIZATION FUND.—Whenever the board finds that there may be an exportable surplus of cotton, wheat, cattle or hogs, or any food product of these commodities, and that a substantial number of cooperative associations are in favor thereof, it shall arrange to assist in removing this surplus from the domestic market by entering into agreements with cooperative associations or with persons engaged in processing such agricultural commodity, for the payment out of an equalization fund of losses and the payment into the fund of profits arising out of the handling of the commodity.

OPPOSED BY WHEAT AND COTTON MEN.—This new revision of the Dickinson bill is disliked by representatives from some of the wheat growing districts who say it is a scheme of the Corn Belt group to load their losses over onto the wheat and cotton growers. Congressman Aswell, of Louisiana, says the cotton farmers do not want it, that they are opposed to equalization fee schemes.

WOULD LEND THEM MONEY TO BUY FROM US.—Carl Vrooman, of Illinois, appeared for the Robinson-Oldfield bill, which provides for the creation of a Federal Export Corporation to encourage foreign purchases of American agricultural surpluses by extending foreign importers credit from a $200,000,000 fund to be placed at its disposal for this purpose. It is Mr. Vrooman's idea that foreigners will buy our basic farm products in preference to similar products from Argentina, Australia and other food exporting countries, if we loan them the money to pay for the commodities.

HIGHER RATES—LOWER REVENUES.—An increase in rates does not always result in increased revenues, as reports from the Post Office Department seem to indicate. Postmaster General New has submitted data to the Senate based on the first six months of this fiscal year, showing that the estimated postal receipts for this year ending June 30, would be $49,453,090 less than operating expenses. There has been a further decrease since the first of the year, which would increase the deficit several million dollars more.

The report shows that the department handled 721,279,719 fewer pieces of mail in the latter half of 1925 when the new rates were effective than during the same period in 1924 when postal rates were lower.

WOULD LOWER POSTAL RATES.—This report has led Senator McKellar, of Tennessee, to offer a bill to reduce rates. The bill would restore the 1920 rates on second, third and fourth class mail, the one-cent rate on postal cards, and would remove the service charge on parcel post. This parcel post service charge has been strongly opposed by shippers of day-old chicks, and farmers who have undertaken to do a mail order business in disposing of their products. The American Farm Bureau Federation has been especially active in its endeavors to secure the repeal of this service charge.

COMMITTEE NOT SATISFIED.—The present attitude of the Agricultural Committee does not lend much encouragement to any of the proposed measures. Many persons representing trade and commerce bodies are asking to be heard in opposition to the revised Dickinson bill.

It has been impossible to keep politics out of the hearings. It is evident that spokesmen for the Corn Belt group have hurt their cause by making threats of political punishment unless Congress enacts their bill into law. Impartial observers are more firmly convinced than ever that none of the proposals presented so far will be favored by the committee or if reported out could be passed thru Congress.—E. E. Reynolds.

Harrisburg Letter

BEETLE FIGHT STARTS.—Altho it will be months before the Japanese beetles will be winging their flights, state authorities in the Bureau of Plant Industry have begun their supervisory work in the nurseries and all spring shipments are being carefully inspected for traces of the pest. Organization of the patrol work is also being mapped out as there will be an extension into five additional townships under the quarantine announced on January 1. Director C. H. Hadley is planning the state's work on as large a scale as the money available will permit and is confident that with cooperation results can be obtained better than anticipated. During the winter state agents have been carrying forward educational work in connection with the beetle campaign and in sections where the pest was troublesome last year promises of assistance have been given. Organization of the corn borer quarantine will be taken up later as the preliminaries have been planned and it is seen how extensively corn growers in northwestern Pennsylvania burn up cornstalks this spring.

"Rushing the growler"—Past and present.

ONE-THIRD SUPERVISED.—According to the latest figures at the State Bureau of Animal Industry about a third of the cattle of Pennsylvania are under supervision for tuberculosis tests. This is the greatest number ever known in the state and shows the widespread work of the Bureau. It is estimated there are 524,000 cattle in 67,200 herds under supervision. Work of inspection has been pushed thru the winter and there has been little complaint about indemnity payments.

COUNTING PEACH TREES.—One of the most interesting surveys to be undertaken in years by the Department of Agriculture is commencing to show results and in a few months there will be what amounts to a census of the peach trees of Pennsylvania. This survey has been conducted entirely separate from the inspection for peach yellows, which has been done so effectively by the plant pathologists, who have shown a steady decrease in the number of infected trees.

ONLY TOBACCO DOWN.—Judging from what has been gathered by the Department of Agriculture farmers of Pennsylvania will plant about the normal amount of staple crops this year. Wheat is just about what was expected in acreage and the other crops will run along the usual lines except tobacco, reports on which indicate some discouragement due to prices.

AWAIT A COMPLAINT.—A rather curious situation exists at the Capitol in the matter of rural electric regulation. Numerous companies have filed rates for rural service as required under the regulations, but there have been no instances heard of where companies have refused service and as the matter so stands there can be no court test without a complaint.

BUS LINE RULING.—Under a decision just handed down the Public Service Commission has taken the position it may make changes in routes of bus line enterprises even tho they were originally set forth in charters. The ruling was made in a suburban line out of Philadelphia and the position of the commission is that where the public interest can be better served by more or different routes from those granted the commission may, upon proper application, authorize changes.—Hamilton, Harrisburg.

New Jersey Letter

LEGISLATIVE NOTES.—The Fruit Tree Bill, allowing protection under the law when nursery stock is sold with a guarantee that it is true to name, has been signed by the Governor and is now a law. This measure, which is an outgrowth of over two years' effort on the part of the New Jersey State Horticultural Society and the farm bureau, provides a way for growers to recover damages when they purchase from reliable nurserymen under an approved guarantee. Little definite progress is being made on the proposed state gas tax or the automobile liability insurance measures. The week of March 22, the legislators will rest from their active duties of introducing new bills. Reconvening the following week, new bills will again be received. The Legislature will continue in session this year for some weeks yet to dispose of the large number of measures presented.

URGES LABOR AIDS.—In an effort to stimulate interest in modern mechanical devices, Governor Moore of New Jersey urged the State Department of Agriculture to declare the week ending March 20 as farm machinery week. Attention was called to deficiencies in certain classes of farm labor on New Jersey farms this year and the advisability of supplementing efficient help with efficient power equipment. Machinery distributors in various sections of the state have co-operated.

SEEK INSURANCE PRIVILEGE.—The New Jersey State Grange has expressed interest in the money-saving privilege on mutual automobile liability insurance which the County Board of Agriculture have been offering to their membership for the last three years. The County Board have retained this privilege exclusively for their membership altho recently, following expression of desire on the part of the State Grange for similar privilege, the plan may be extended to Grange members.

START BETTER EGG CAMPAIGN.—Organized poultrymen back of Atlantic City are advocating the adoption of a federation seal which will stand for quality and freshness of their eggs. The proposed plan would allow use of the seal to Federation members only. An advertising campaign is proposed in order to acquaint Atlantic City consumers with the merits of carefully graded, high-quality fresh eggs. By creating a demand the poultrymen expect to merchandise their cartons in a way that is beneficial to both consumers and themselves.

POULTRY FEDERATION PLAN.—The Atlantic County Federation of Poultry Associations will hold its annual picnic at Mays Landing, N. J., in July. A movement is on foot for the Cape May County Poultry Association to hold its annual outing at the same time and place. The Atlantic County poultry show is scheduled for Egg Harbor September 15 to 18, which is two weeks later than usual. At a recent meeting of the Atlantic County Federation the following officers were elected: President, Leonard Gilpin, of Dorothy; vice president, Harry Carroll, of Hammonton; secretary, Arthur R. Eldred, of Mays Landing.—B.

New York Letter

COLDEST MARCH IN YEARS.—This is the coldest March since 1912. County roads remain blocked, with much ice as well as snow. Floods are feared when it does get warmer. Maple sugar making seems as far away as a month ago.

FARMERS OPPOSED TO INCOME TAX REDUCTION.—News of tax income cuts and the satisfaction of cities over the fact stirs the ire of the farmers who are aware of the situation. Too many are ignorant of changes and proposed legislation, nor do they realize that the reduction of the income tax will be but a continuation of last year's tactics. An example of the situation is shown in the fact that the valuation of Broome County was raised in its assessment of farming towns $15,000,000, while Binghamton, its one city, was assessed down $1,230,000.

SPRING OUTLOOK.—The seed potato supply is unusually low. Farmers are faced with a difficult planting problem. On January 1 the supplies of merchantable potatoes on hand were a third less than a year ago, and the supply has rapidly decreased since. Certified seed production in the United States was only half that of 1924, but only ten per cent less in this state. The high price has led farmers to sell themselves short of seed, a fact which promises to overcome slightly the tendency to overcrop following a year of good prices in potatoes.

LACK OF PHYSICIANS.—At the recent hearing on the rural health bill it was shown that the death of older physicians and the refusal of younger ones to locate in rural sections has left the country unprotected from the ravages of illness. In one county where ten years ago there were eleven physicians there are now but three. The hearing may not result in help from the finance committee, yet progress was made in the matter.—M. G. Feint.

What paint will you use this spring?

MANY house-owners today will answer that question by saying, "Paint made of Dutch Boy white-lead and pure linseed oil." Why?

Dutch Boy white-lead is pure white-lead, corroded from the metal, lead. It makes an all-lead paint which resists the attacks of the weather. It insures you against loss from decay. It increases the value of your farm.

If your farm buildings are beginning to look a bit weather-worn and shabby, cover them now with Dutch Boy white-lead paint. It is reasonable in price. Only 100 pounds of Dutch Boy white-lead is required to make seven gallons of pure lead paint.

The real economy, however, in using this paint begins after you buy it. Dutch Boy white-lead paint gives a smooth, even film that is tough, durable, elastic—a film that does not crack or scale. It enables you to save the cost of repairs you would have to make sooner or later on unpainted and deteriorating property. It lengthens the period between repaintings. And each succeeding year the appearance and the condition of the house painted with white-lead make evident the superiority of a pure lead paint.

"Decorating the Home" is a new free booklet illustrated in color which suggests decorative treatments for exteriors and interiors. It will be sent you, along with a booklet which gives directions for painting wood, plaster, metal and masonry, if you write our nearest branch.

NATIONAL LEAD COMPANY
New York, 111 Broadway; Boston, 131 State Street; Buffalo, 116 Oak Street; Chicago, 900 West 18th Street; Cincinnati, 659 Freeman Avenue; Cleveland, 820 West Superior Avenue; St. Louis, 722 Chestnut Street; San Francisco, 485 California Street; Pittsburgh, National Lead and Oil Co. of Penna., 316 Fourth Avenue; Philadelphia, John T. Lewis & Bros. Co., 437 Chestnut Street.

You will see the figure of the Dutch Boy Painter on every keg of Dutch Boy white-lead. It guarantees a product of the highest quality. In addition to white-lead, there are also made under this trademark: red-lead, solder, babbitt metals, and flatting oil for use with white-lead in painting interiors.

Dutch Boy White-Lead
Makes an All-Lead Paint

Crows pulled one hill, and said: "Good night!"

writes C. H. Barrett, Thetford Center, Vt. "I wouldn't plant without it."

Hundreds of corn-growers write us letters like these: "Had no corn pulled that I could discover."—F. G. Vincent, W. Tisbury, Mass.

"Crows nor nothing seem to bother it"—M. Crockwell, Red Hook, N. Y.

"It does the job"—L. Varnum, Alexander, Me.

"One kernel was pulled by crows. None were eaten. Yet crows were in fields all the time catching bugs," says M. S. Taite, Turnhannock, Pa.

"The crows pulled only one hill of my corn"—L. Martin, Hillsboro, N. H.

"Saw but one hill taken"—A. J. Hicks, New Carlisle, Ind.

"Did not pull one hill in 1½ acres of corn"—G. Post, Dover, Mass.

Stanley's Crow Repellent

is what they are talking about. And we can give you scores and scores of more letters all saying the same thing. Why do you worry about your corn crop, when for $1.00 you can save from 1 to 2 acres of corn for every bushel of seed you plant? "Money Back" guarantee,—you to be the only judge. Large can, enough for 2 bu. of seed corn (8 to 10 acres) $1.50. Half sized can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, order direct. Address Cedar Hill Formulae Co., Box 500 R, New Britain, Conn.

Keep Out. This field is mined.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

A NUMBER of requests for detailed information about how and when to plant crops and how to fight disease and insects have come in during the past few weeks. While it is not my intention to make these notes a compendium of technical advice, I will break the rule for a week or two to meet the demands which have been made. The real purpose of Neshaminy Gardens notes is to give the writer an outlet for his own notions and impulses, and to provide a place for the discussion of more or less unimportant subjects. As to the queries mentioned, they will be treated in few words:

✦ ✦ ✦

ASPARAGUS.—It is believed by many that the Martha Washington and the Mary Washington are the most desirable sorts because they are more resistant to rust. Buy good strong one-year-old roots. Prepare the ground deeply as early in spring as possible. It is well to plow down a heavy coat of well rotted manure if possible. Make deep furrows, ten to twelve inches, six feet apart. Spread a high grade fertilizer in the row—500 to 1,000 pounds per acre. Spread the roots of the plant (one-half of them each way) in the bottom of the furrow. Hold the plant in place with one hand, and with the other draw dirt over the roots, firming it with the hands. A hoe may be used to finish the covering, but not more than two inches of dirt should be put on at first. In a few days cultivate the plat, letting more soil roll into the furrow. Repeat every few days until the surface is level. We usually apply about 100 pounds per acre of nitrate of soda over the row before the first cultivation. Don't let the weeds get a start.

✦ ✦ ✦

PEAS.—Peas are by nature a cool weather crop, hence should be planted as early as possible. The smooth varieties, such as the Alaska, may be planted as soon as the ground is fit to work. The wrinkled varieties will rot more easily if the soil remains cold and wet too long after planting. None of the smooth varieties are as high in quality as the wrinkled sorts. Of the latter, the Gradus is the earliest high-class pea. Make the furrows about four inches deep, sprinkle the seed liberally in the row and cover lightly at first and fill up gradually. Good soil and liberal fertilizing will pay. Too much nitrogen is to be avoided, else excessive vines will result.

✦ ✦ ✦

BEETS.—Beet seed may be planted almost as early as anything else in the garden. The soil should be well enriched and made very fine. If a garden seeder is used, set it to cover the seed about one-half inch deep. If sown by hand, make slight furrows with a stick, using a board as a straight edge. Sprinkle the seed in the mark and cover evenly. Humus, water and plenty of fertility are needed to get a quick crop of high quality. It is usually necessary to thin the plants so that they will stand three or four inches apart. Part of the thinning may be left until the most forward are ready to pull for use. Keep clear of weeds.

✦ ✦ ✦

ONIONS.—Of course, everybody knows how to raise onions from sets, but few home gardens try to raise them from seed, altho it is easily done. Plant as early as soil is fit to work, using the same methods as with beets except that the seed should not be covered quite so deep. Keeping a seed onion patch free from weeds is somewhat difficult unless the ground is very clean. The seed may germinate slowly, and since the stalks are so small at first it is hard to follow the row in weeding. But after they get a start, raising onions from seed is easy. In hoeing onions, do not draw the dirt over the bulbs.

✦ ✦ ✦

An old colored man was arrainged before a justice on a charge of assault. During the proceedings the judge asked him if he wanted a lawyer appointed to defend him.

"No, no, Judge," he replied; "I don't wan' no lawyer, but I sutinly would like a couple of good witnesses, if you got 'em."

THE CHEERFUL PLOWMAN

Cows Like Music

MY COWS like music, so I've found, so when I start to milk I try to make a humming sound as smooth and fine as silk. I hum an ancient lullaby with soothing sort of drone, and oftentimes I even try some music of my own. I sing, "Good Daisy, tra-tra-lay, lay by your every fear, but munch your bran and chew your hay like brave and honest steer! Let down your milk with even flow, don't hold it back at all, for all is well, you ought to know when I am in the stall!"

Old Daisy was a "kicking cow," that's what her owner said, "She'll break the rafters in the mow above your very head, so keep the upper hand, my friend, and show that you're the boss, or she will knock you end on end and make you total loss! Put shackles on her random legs and keep your eye alert, or she will lift you off your pegs and do you muckle hurt!"

I bought her with a smiling face, he sold her very cheap, and brought her meekly to my place without a lurch or leap. That night when I went out to milk no hand-cuffs did I take, but hummed a tune as smooth as silk about a rippling lake. I took the stool without a qualm and stroked her silken hair, I acted sweet, and plain, and calm, the while I hummed an air. My land, she never raised a foot, the milk flow didn't fail, she didn't make a move to put her tootsies in the pail. Sworn friends for life are she and I, and music did the trick; there is no earthly reason why a cow like she should kick!—J. Edw. Tufft.

Our Baltimore House

This map shows the States served by our Baltimore House.

Do Your Shopping In This Big Baltimore House

If this big Baltimore House of Ward's were just around the corner from your home—where would you do your shopping?

Yet that is almost true. Your Catalogue enables you to visit, to see every room in this big building, to note the price of every piece of merchandise, to shop at will for everything you need.

Do you really *use* your Catalogue? Study each page just as you would visit each merchandise room in this big building.

$50 Can Be Your Saving This Season

Just consider that $60,000,000 in cash was used in buying the merchandise for your Catalogue. Think of this vast buying power at work for you—to make low prices for you, not only on tires, or furniture, or clothes, but on almost *everything* you buy.

Every time you look at your Catalogue, remember that you and 8,000,000 other customers made this all possible. That together you have given us the buying power to secure these low prices for you. Such is the advantage of your cooperative buying, all together, through Montgomery Ward & Co.

"Ward Quality" Assures Lasting Satisfaction

We try to buy only goods of standard quality. We make low prices by big buying for cash. We do not cut quality. We never sacrifice your satisfaction or the wear any article will give in order to quote a low price.

It is easy to make a low price by sacrificing quality. It takes millions in cash, and a complete buying organization to visit every market in America and Europe, to enable us to quote these low prices—*and maintain Ward Quality.*

These are the facts to consider when you look through your Catalogue. These are the reasons why you should turn to your Catalogue for everything you need to buy. The Catalogue brings you the opportunity for saving. This big, convenient Baltimore House is ready to serve you quickly. There is a saving this season of at least $50 in cash for you—if you use your Catalogue—and send all your orders to Ward's.

Your orders are shipped within 24 hours

Your orders will be shipped within 24 hours. That saves time. Our big Baltimore House is near to you. Your letter reaches us quicker. Your goods go to you quicker. It is quicker and cheaper, and more satisfactory to send all your orders to Ward's.

Fertilize for Corn of Better Feeding Quality

Every Agricultural Experiment Station will tell you that sound, well-matured corn will produce more pounds of pork than soft or poorly developed ears.

Cut down the proportion of nubbins, poorly filled and soft ears in your crop by using a well-balanced fertilizer on every acre you plant this spring.

V-C Fertilizers for Corn are made to meet the need of the plant on the soils of your State. They give the corn plant an early start, uniform growth and produce sound, well-matured ears before frost.

V-C Fertilizers have an established reputation among corn growers for producing heavy yields of sound grain of high-feeding quality.

Ask your dealer for V-C Fertilizers made for Corn, or write

Catalog and Seed Samples-FREE!

Heavy Yielding Seed Oats 7 Varieties

Such a complete list of Valuable Oats is not offered elsewhere. Good heavy yiedlers. Some extra-fancy certified seed. Stiff-strawed kinds. Sound, white, heavy, clean seed—all of it. Samples free. Be sure to inspect this stock. It will pay you well to sow such seed!

Pure Bred Seed Corn Sound Germination

Here is rare-quality Seed Corn. Good, dry, sound, well-matured seed—cared for right over the winter. Tests 92 to 98% germination. Ten kinds. Early varieties for husking. Good heavy croppers. Splendid Silo Corns. Costs you only 30c to 40c an acre! Samples free.

Potatoes Grains Grasses Soy Beans Field Peas

The leading standard varieties of Seed-Potatoes—some Certified seed. Good quality seed—at right prices! All the spring grains — Barley, Wheat, Rye, Buckwheat, etc. Pasture Grasses—Clovers—Alfalfas—extra hardy strains. Many kinds of Soy Beans, with full cultural details. A complete list of Quality Seed.

Write today. Mention the Samples you want to see. You'll get them and the Catalog—both free—by quick mail. Buying your Seeds from this List is going to please you and show you a good profit!

Garden and Truck Crops

Neglected Asparagus Bed

Can you tell us what to do with a well established asparagus bed that has been neglected for three years? It is sod packed. While the asparagus was good and plentiful last season it was hard to locate owing to the grass. Could any of the roots be reset into a new bed? —J. W. K., Montgomery Co., Pa.

Since asparagus is a perennial plant and a bed once set out often continues to produce from ten to twenty years, the condition you describe is fairly common. The first few years it is not such a difficult matter to keep the bed clean. Soon, however, witch grass, wild morning glory or some other bad weed gets a foothold and unless rough measures are used the asparagus is relegated to play second fiddle to the other vegetation.

Stop Cutting First of June

A bed of asparagus where the grass is so thick as to hide the shoots is ready for a heavy cleaning up. I would suggest that you disc and cross disc the patch as soon as the ground can be worked, smooth soil down with either a meeker harrow or drag. This is, of course, previous to the first growth.

After the first discing, cut the shoots for about two weeks then make a close cutting and disc again. Repeat this every two weeks. Normally the cutting season ends about the middle of June. In this case I would stop cutting about the first of June, give the ground an extra heavy discing and cultivate every few days, keeping all growth down. This may help but bad patches of grass may have to be dug out.

It generally is not advisable to transplant old roots. If your bed is over ten years old, I would start a new bed, using one year roots so that in three years when it begins to give a good supply you can rip out this old bed where the grass has a hold. Keep at the old bed but have a new one coming along so that if the grass keeps the upper hand you can plow the asparagus out and plant to some other crop.—W. T. Tapley.

Trouble with Cabbage

For the last four years I have had trouble in growing cabbage plants. When they get from two to three inches tall they rot off just under the ground. Last year I made a new cold frame some 200 feet from the old one and a much larger percentage died than before. We have no trouble growing cabbage plants in the open garden, but under glass where we use a little strawy horse manure heat they all seem to rot off. If you can tell me the trouble or give suggestions I will appreciate it very much.—A. E. T., Westmoreland County, Pa.

Damping off of small seedling plants is, without doubt, the bogy of many a plant grower. A man makes an effort to find a good strain of cabbage, pays real money for seed, plants the seed, nurses the plants along, only to have, within a day, perhaps twenty per cent of the plants destroyed.

Practically all of our vegetable plants in the seedling stage are susceptible to damping off. Those most severely attacked are tomatoes, cabbage, cauliflower, cucurbits, eggplant, peppers and celery. Damping off is the term generally applied to this disease, other names are black rot, stem rot and, in cases where the plants partially survive, wire stem. The organism is sometimes attributed to a strain of Corticum vagum or to Phythium debaryanum.

When the plants are from one to three inches in height, either in the seed row or after transplanting, damping off may begin to show. The susceptible period usually lasts from two to three weeks or until the plant hardens or woody tissues are developed. The tender stems just at or below the surface of the ground appear to be discolored or water soaked, in a few hours the plant topples over because the stem can no longer serve as a support. The whole stem tissue may decay and the plant die. Sometimes if the attack is light the plant will partially recover and thereafter be dwarfed or crooked with a woody, wire-like stem. A plant so injured will never be the equal of a good healthy plant.

Damping off is caused by a disease organism which may be carried on seed or more generally in the soil. A high moisture supply favors the spread of the fungus. If there is to be no infection it is clear that before the seed is planted the fungus must be killed. Control measures are seed treatment, soil sterilization, and keeping the top soil and plants fairly dry.

To Secure Soil Sterilization

Soil sterilization may be by thoro steaming, by using formaldehyde or Upsulum. Steam sterilization is the cooking or heating of the soil to a temperature of at least 140 degrees Fahrenheit and held there about two hours. It may be done in various ways: live steam, wood fire under a pan, soil put in oven, surface burning and even soil baking. Hot water may be used but is not quite so effective. Seven gallons of boiling water are required for each square foot of soil. A flat 14x30x3 inches would need about four and one-half gallons.

A soaking of the soil with formaldehyde sometimes is helpful. One part of commercial formaldehyde is diluted with fifty parts of water and one gallon of this used for every square foot of soil. Have the soil wet down so the solution will penetrate readily. Do not plant seeds in this soil for ten days. The use of Upsulum in control of damping off is increasing.

It is difficult to control damping off by control of environmental conditions but avoid excessive watering. —W. T. Tapley.

Do It Before April

PRUNING of currants and gooseberries before the first of April is recommended by the New Jersey State College of Agriculture. This is because these plants start growth early in the spring. A systematic annual pruning will increase the size and amount of fruit, keep the plants more vigorous and prolong their lives. Gooseberries and currants produce fruit from lateral buds on one-year wood and on spurs on older wood.

The first step in pruning is the removal of all dead, injured, or diseased canes. The remaining canes should be thinned out by removing the older wood which is making very little growth. Canes which bend over so that fruit would touch the ground may as well be pruned off. Weak one-year-old canes may be taken out, for they simply make the bush more dense, hindering spraying and picking without materially increasing production.

Most of the vigorous one and three-year-old wood may safely be left on the bush. Usually very little heading back is necessary altho very long one-year-old canes may occasionally be tipped back to encourage branching.

Radio saves thousands of dollars a year for the farmers. To the weather and market reports, and the agricultural lectures, broadcasting stations all over the country add many emergency services to the farmer. Station WGY will broadcast the word to spray, the day the buds open to the codling moth.

Radiola 20, with five Radiotrons . . **$115**

Where dependability counts— Radiola 20

WHEN the codling moth lays its eggs in the bud—the word comes—right on the hour—"Spray!" When a cold wave is rolling toward the home fields—the warning comes—"Frost tonight!" The farmer no longer plays a losing game with the weather man. He gets the weather reports by radio. He no longer takes the price he can get—but sells his goods at the top of the market. He gets the market reports daily—by radio.

On the farm, where the dependability of a radio set is a matter of dollars saved—where distance is important—and clearness—the new Radiola 20 meets all demands. It was built to give greater five tube performance than any previous five tube set—for those who want a fine set at a moderate price.

It is so accurately built that, with its three tuning circuits for sensitivity and selectivity, it can be tuned in with a *single control*. The man who wants to play for distant stations will use the extra knobs for extreme delicacy of tuning. But a single turn of a single control will bring in the near programs, one by one.

For volume—on inexpensive dry batteries—Radiola 20 has the new RCA power Radiotron. This newest tube takes the strain of added volume—gives you clearer, truer tone.

With Radiola 20, the farmer has the simplicity of uni-control. *Volume* and clarity of tone for the music of the great artists, now being broadcast from the big cities. *And dependability!* RCA, with the backing of the great laboratories of General Electric and Westinghouse, can assure you not only finest performance, but continued fine performance.

Get a Radiola 20—and get close to the market, news and entertainment centers of the great cities!

Experienced Potato Growers Are Dusting

The Potato Plant is a factory for producing potatoes in the soil. The size, quality and yield which the potatoes make—will depend upon how well the "Potato Factory" has been erected and how long it has been correctly maintained throughout the late "tuber making" period.

Experienced growers everywhere have found that Dusting lends itself to this problem better than any other practice and

DUSTING THE NIAGARA WAY

insures that the vines are working to their maximum efficiency and capacity and so protects your investment in seed, fertilizer and cultivation.

BECAUSE: 1. You can dust with a 4-row Niagara Duster 20 acres in 7 hours. 2. The Niagara Duster is so light you can get "in and over" even a hillside planting during those wet cloudy times when Blight comes to destroy your crop. 3. Niagara Dusters are always ready—no mixing—no water hauling—no clogging nozzles—no hold ups. 4. Niagara Potato Dusts increase the output of the potato vines, prevent Blight and kill Bugs and so put sound marketable potatoes in the ground.

IT WILL PAY YOU TO DUST THE NIAGARA WAY

Investigate now, today. Ask your dealer or write us. Remember Blight and resultant rot are no longer feared by growers who dust.

Niagara SPRAYER COMPANY **Middleport, N. Y.**

Niagara
DUSTS and DUSTERS

Make Your Fruit GRADE Higher

It takes fancy fruit to bring fancy prices. So, of course, the reason the orchardist sprays is to produce the highest grade fruit possible. He knows that superior soil and trees can't possibly produce fancy fruit unless pests and fungous diseases are kept out of the orchard.

But, an insecticide or fungicide to insure full protection must fully cover. A spotty spray offers little hindrance to the destroyers, or burns blotches on the fruit and lowers the market value of the crop.

Be sure that your spray fully covers. Take the advice of the experts and use Kayso, the complete casein spreader.

With Kayso, the spray forms an even, all-over coverage that protects the entire surface, and, in the case of a combined spray retards harmful reactions and the formation of sludge.

Successful orchardists who are getting top prices for fancy fruit, write us they wouldn't think of spraying without KAYSO.

It means money in their pockets. It will be worth money to you to try it out on your own trees, vines or vegetables.

Ask your dealer for further particulars, or write us direct.

Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Thirty Years of Commercial Strawberry Growing

FOR nearly thirty years strawberry growing has been my life work. First, I began to grow them for fruit only. In this I was very successful. I started with one acre and made from this acre the first real money I ever had. While my profits were considerably less than I have known to be made since, nevertheless, it was a start for me and one that I was proud of. My father had been a grain farmer all his life, and the year I harvested my first crop of berries happened to be one of the years when corn and other grain sold very low. My proceeds from the one acre of berries were greater than from his fields of grain.

Naturally I was anxious to increase my acreage in strawberries, and I did. In less than ten years I was growing them by the hundreds of acres. But not very many years did I hold this gait. I soon learned that the real money to be made in growing strawberries was to be made in a lesser acreage. Consequently, my acreage was cut down to the minimum and I started all over again.

Along More Scientific Lines

My second start was along more scientific lines. I began to propagate a few of the very best varieties, and to grow them under restrictions. Every year I had a test plot in which I tested out hundreds of new varieties. In this way I soon learned the most valuable varieties. These selected varieties were nursed by selecting the largest and most promising plants for my breeders. New soil was selected to plant them in. Different methods of manuring and cultivation were used, and by this method I soon found that I was on the right road and that I could count on a sure profit every year.

I have learned that new land is best for the strawberry, and the closer you can get them back to nature the better. When newly cleared land is not to be had, then the next best thing is to prepare an old worn-out sod land. It takes a few years to get the old worn-out soil fitted up for strawberry growing but once you get it right you can expect big crops.

My method is first to plow up this old sod in the early fall. Let it lie until the following spring, and then broadcast at least four tons of ground shell lime or ground limestone per acre. Thoroly disc the land several times. In June I apply 1000 pounds of acid phosphate per acre and drill in soy beans or cow peas. This crop is plowed under in the early fall and seeded back to rye, which in turn is plowed under in the early spring and a second application of lime of two tons per acre is used. Again the land is thoroly disced both ways with a double tractor disc and is made as fine as it is possible to make the soil by harrowing the top several times after discing.

Marking Out the Rows

After the soil is firmed with the harrow, rows are marked out with a row marker that marks three rows at a time and makes a trench about four inches deep. In this trench or furrow is applied 400 to 500 pounds of bone and tankage. The fertilizer distributor used has an attachment for mixing the fertilizer with the soil as it is applied.

The disc wheels on the marker are reversed and the row is ridged slightly above the level, just a narrow ridge that is easily knocked down with the hoe the first time the plants are hoed, leaving them just level with the ground after first cultivation and hoeing.

In my twenty years practicing this method of working sod land I have never failed to grow a fine crop of plants, or a fine crop of berries if the plants were left for fruiting. I can fully recommend this method to any one in any section. The amount of lime used in the two years is sufficient to put the soil in action. The acid phosphate helps the plant growth and the bone and tankage starts the plant growth and keeps them going. I have tried broadcasting as high as twenty tons per acre of the best horse manure, and giving applications of fertilizer before planting without the use of lime but always had a failure.

When newly cleared land is used I apply two to three tons of lime per acre just as soon as the first plowing is made. This is thoroly disced into the soil. For several weeks this land is left after discing. Usually we disc in the fall months, or early winter if possible, so that the lime has most of the winter to act. In the spring we broadcast one ton of fertilizer as follows: 1000 pounds acid phosphate, 500 pounds bone meal, and 500 pounds tankage. This is thoroly harrowed into the soil and a light marker used to mark off the rows for plants, and the plants set level with the surface.

Why New Land Is Best

Another thing I have found is that you never need be afraid of getting too much humus in the soil for strawberries if it is put in the land at the right time and the right way. This is the one reason why new land is best for strawberries.

Three varieties, and not over four, are all that should be planted for the commercial crop. Some sections of the country stick to only one variety. I do not agree entirely with this method, as I do not see how one variety can fill the needs. I have found it to be most profitable to grow one extra early variety of short season, one medium early, and one late, and possibly one very late. In the case of the market gardner the Everbearing is usually a very profitable crop. For commercial shipments the extra early variety is usually profitable to grow. The main crop variety should always be the most ideal market variety for that particular section.—E. W. Townsend, Maryland.

Bees in the Orchard

WHEN using bees in orchards for pollination purposes, it is best to scatter them as much as possible, as it has been found that in some seasons, under adverse conditions, bees do not venture more than 100 to 150 yards from the hive. An apiary placed on one side of an orchard will therefore not give as good a distribution of bees as single hives scattered among the trees.

The best way to distribute bees is, probably, to place one hive every 210 feet each way. This gives approximately one hive to the acre. Recalling the variation in hive strength at this time of the year, a smaller number than one hive to the acre cannot be considered sufficient.

A hive of bees at fruit blooming time should contain about 15,000 bees, equal in bulk to about three quarts.—New Jersey Experiment Station.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Wood Ashes As Fertilizer

What should be mixed with wood ashes to make a good spring fertilizer?

Ashes made from different kinds of wood vary in composition. Hard wood ashes are usually richer in plant-food ingredients than are soft wood ashes. Unleached, hard wood ashes should contain 5 to 7 per cent of potash and 1.5 to 2 per cent of phosphoric acid. When wood ashes are exposed to the weather most of the soluble potash is leached out. For this reason, leached wood ashes contain about 0.5 per cent of potash There is but little change in the phosphoric acid, since this ingredient is not present in wood ashes in a readily soluble form.

Aside from phosphoric acid and potash, wood ashes—either leached or unleached—contain lime, usually about 30 to 35 per cent. The presence of potash, phosphoric acid and lime make wood ashes a good fertilizer, especially in the case of soils which respond to applications of these ingredients.

Some Materials Can't Be Used

Because of the large proportion of lime contained in wood ashes, certain fertilizer materials cannot safely be used for making up mixtures. For instance, when sulphate of ammonia is mixed with wood ashes, part of the ammonia escapes into the air. Furthermore, soluble phosphates mixed with wood ashes become insoluble.

A satisfactory mixture may be made up of:

1000 lbs. unleached wood ashes
300 lbs. nitrate of soda
700 lbs. bone meal

This would give a mixture containing a little less than 4 per cent of ammonia, 9 per cent of total phosphoric acid and approximately 3 per cent of potash. This mixture may be employed at the rate of 300 to 1000 pounds per acre, depending on the kind of crop on which it is used.—J. G. Lipman.

To Last Three Years

What is a good fertilizer for hay and wheat? I want one that will last three years.—T. E.

A fertilizer that would have a lasting effect on grain and hay should contain the three ingredients found in commercial fertilizers, namely, ammonia, phosphoric acid and potash. The exact analysis of the mixture and the amount to be used must be determined by the character of the soil and the treatment which it has been receiving in years past.

If the land is medium or heavy loam and is in a fair state of fertility, a mixture containing 3 to 4 per cent of ammonia, 8 to 10 per cent of phosphoric acid and 4 to 6 per cent of potash should give good results. This may be employed at the rate of 300 to 500 pounds per acre at seeding time.

In the following spring you could determine whether the grain and grass are growing sufficiently vigorously and have a sufficiently dark color to indicate that the crop is getting enough nitrogen (ammonia). If the crop is backward, it should be profitable to use as a top dressing a fertilizer mixture consisting of 50 pounds of nitrate of soda, 50 pounds of sulphate of ammonia and 100 pounds of bone meal at the rate of 200 pounds per acre.—J. G. Lipman.

Prices and Prospects

THE apple markets normally advance after the first of the year but this year prices have declined at both shipping points and consuming markets. This has been due partly to the heavy supplies on hand and also to the fact that some of the fruit has not been holding up well in storage. Storage holdings on March 1 were 41 per cent greater than a year ago and about 20 per cent above the five-year average for this date. There were 27 per cent more barreled apples in storage on March 1 than in 1925 and 88 per cent more basket stock.

Holdings of western apples are more than twice as heavy as last year and this stock is moving toward the East as fast as the markets will absorb it. The market in Philadelphia has been very dull and trading has been light. Pennsylvania A 2½-inch Staymen topped the market at $5.50 per barrel on March 17th.

The potato market displayed a stronger tone during the week ending March 17, despite a heavy increase in shipments and active imports from Canada and Bermuda. The shortage in the East and South is shown by the wide distribution of northern and western potatoes. Maine led the shipments during the week ending March 13 with 1200 cars.

Shipments from Idaho increased sharply to 725 cars compared with 300 for the same period last season. Last year at this time Maine bulk Green Mountains were selling at around 55c per hundred pounds f. o. b, compared with $3.90 to $4.00 on March 15, 1926. Pennsylvania round whites closed at $6.85 per 150-pound sack in Philadelphia on Wednesday compared with $1.65 on the same day in 1925.

The butter market during the week has been generally sensitive and unsatisfactory with 92 score butter at Philadelphia selling at ranging prices. The market opened at 44c on March 10 and the price varied daily within a two-cent range, closing at 43½c on March 17th.

The New York egg market was active during the week ending March 17 and nearby stock held firm. Receipts were more liberal and cheap grades are in demand. The competition for desirable stock for the Jewish and Easter holiday trade requirements has been keen. Nearby extra firsts sold at 33½c to 34c per dozen on Wednesday and firsts at 32c to 34c.

Egg Market Firm

The Philadelphia egg market was firm during the latter part of the week and the demand was fairly active. Receipts for the week totaled 29,994 cases, of which number Pennsylvania supplied 3089. The live poultry market was rather irregular and closed weak. Broilers were weak, while fat fowl ruled firm. Dressed poultry was firm with light offerings of desirable stock.

The New York market for live fowl was irregular during the early part of the week. Light receipts caused prices to advance and the market was firm at the close. Chickens were in light supply. Express fowl, both colored and Leghorn, made a slight advance.—W. R. W.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. **Finally, I sent to the Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept., 518, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 518,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

House for 200 Hens

Please send me plans and arrangements of a hen house suitable for 200 hens and tell me whether shed or comb roof is the best and if a house boarded and covered on outside with slate surfaced roofing would make a good warm building in winter. Should house have a pit one or two feet under ground or be flush with top of ground?—A Reader, Armstrong County, Pa.

You can obtain bulletins on poultry house construction from State College Experiment Station and the Division of Publications, Washington, D. C. Some poultrymen prefer the semi-monitor poultry houses and others like the shed-roof type or half-span house.

A hen house boarded and then covered on the outside with slate surfaced roofing paper should make a warm house. Seal the seams to help in holding the paper tightly to the side walls. Some poultrymen cover the seams with narrow strips of wood to hold the paper down. Then the strips are painted white and it helps to make the buildings more attractive. White strips over red roofing paper look very well.

Have Floor Above Outside Ground

It is best to have the level of the floor about one foot to eighteen inches above the level of the outside ground. This insures good drainage and helps to make a dry floor. The fill can be made with cinders or field stone and sand. Then the concrete floor can be laid and painted with asphalt paint to make it smooth and help keep down the soil moisture. Laying roofing paper between two layers of cement is another method of making a dry floor.—R. G. Kirby.

Feeds for Baby Chicks

I want to ask you a few questions about feeds for baby chicks. Which is the better feed for young chicks, a commercial chick starter containing dried milk products or wheat bran and sour milk? Would it be advisable to feed some milk when feeding the commercial starter? Should you have mash constantly before young chicks? What is a good medicine for white diarrhea, and how can it be checked when it gets started in a flock of baby chicks? What is a good fattening ration for broilers? How can you get best results in fattening broilers in winter when you cannot get them out in the sunshine? Would fine chopped cabbage be all right to feed winter broilers for green feed?—H. C., Wyoming County, Pa.

I think you will have much better results with the commercial chick starter than with wheat bran and sour milk. When a starter contains dried milk products it is not necessary to feed milk to the chicks. We give our chicks a commercial starter containing dried buttermilk and feed the home produced milk to the breeding stock during the spring. Later on growing stock on the range receive all the milk available.

Mash Before Them All the Time

I think it pays to have mash constantly before large flocks of brooder chicks. If they show signs of becoming stuffed and seem listless it is sometimes advisable to close the hoppers for a few hours.

It is difficult to treat white diarrhea with medicine and the best method is to test the breeding stock, to remove the carriers and then give the chicks the best of management to keep up their vigor and make them grow. Removing every chick that shows signs of sickness may help in checking the disease in a flock. Keep the litter and drinking fountains as clean as possible.

A sloppy mash of corn meal and sour milk or buttermilk will often produce satisfactory gains in broilers in ten days. A mixture of sixty per cent corn meal and forty per cent oatmeal stirred up with sour milk is also good. When winter broilers cannot go outside it will pay to use one per cent cod liver oil in the ration. The chopped cabbage is all right for winter green feed.—R. G. Kirby.

Ration and How to Feed

THE following chick ration and suggestions for feeding are offered by the Pennsylvania State College:

MASH	
200 lbs.	ground corn
200 lbs.	wheat bran
100 lbs.	wheat middlings
100 lbs.	sifted ground oats
100 lbs.	dried buttermilk
30 lbs	bonemeal
30 lbs.	limestone grit
5 lbs.	salt
GRAIN	
100 lbs.	fine cracked corn
100 lbs.	fine cracked wheat
50 lbs.	pinhead oats

After six weeks use cracked corn and whole wheat. Omit oats.

Suggestions

Do not feed until the chicks are at least forty-eight hours old.

Do not overfeed with mash or scratch grain while the chicks are young.

If skimmilk or buttermilk is available, omit the dried buttermilk from the mash.

Feed the scratch grain four or five times a day for the first two weeks, giving what they will clean up in ten minutes.

Some form of green food should be fed daily thruout the growing season.

Egg Yolks and Cod Liver Oil

In feeding cod liver oil for the prevention or cure of leg weakness, use one pint of oil to 50 lbs. of mash. Egg yolks may be used for the same purpose; one yolk to thirty chicks daily.

After eight weeks use:

Ground oats in place of the oat meal or the sifted ground oats.

- 100 lbs. meat scrap for 100 lbs. dried buttermilk, or
- 100 lbs. fish meal or 100 lbs. dried buttermilk, or
- 30 lbs. meat scrap, 30 lbs. fish meal, and 30 lbs. dried buttermilk for 100 lbs. dried buttermilk.

If pullets show indications of coming into laying too soon, reduce the protein feed in the mash and increase the scratch grain.

New Assistant—Gentleman asks if this flannel shirt will shrink.

Proprietor—Does it fit him?

New Assistant—No, it's too large.

Proprietor—Yes, of course, it shrinks.

Harold—Some men are letting their hair grow these days.

Mabel—Are they?

Harold—Yes, they regard a haircut as effeminate.

Because it SAVES All the GRAIN—

The 4 Threshermen Have 13 ROLLER BEARINGS to help them

Also the New Alemite-Zerk Lubrication and the Tilting Feeder

The 4 Threshermen are ready to thresh when they leave the factory, and to keep on threshing for years to come.

It is no trick to run the Nichols & Shepard Thresher, the 4 Threshermen, the Big Cylinder, the "Man Behind the Gun," the Steel Winged Beater and the Beating Shakers, make sure that you will save all the grain.

The Red River Special threshes all grains and seeds.

The Hyatt Roller Bearings with Alemite-Zerk Lubrication cut down the power needed to pull the separator, eliminate hot-boxes and do away with most of the work of oiling up.

The N & S construction of practically all steel, makes a machine that will last a lifetime.

This high quality Nichols & Shepard Thresher is now offered at a price that places it within your reach.

A size for every tractor — from the Fordson up. Big capacity and ability to do good work under difficult conditions, make it a profitable machine to own. Be ready to thresh!

Radio Department

If Set Loses Sensitivity

FOR a long time, the owner of a new radio set goes along listening in night after night, confining his reception more to local stations after the first week or so of long distance fun. Finally he makes the disheartening discovery that his set doesn't bring in KFI any more, nor does it seem to have quite the former punch when he attempts to tune in on KSD or KYW.

At first, he may think the atmosphere is bad that night, but several evenings' trials reveal the fact that something is amiss besides the weather. Gradually the DX stations fail to come in and altho his fellow commuters on the 7:55 continue to tell about programs from Denver and New Orleans, he finds that the locals are about all he can get with any satisfaction.

There are several reasons which may account for this failing sensitivity of his set. Chief among these, perhaps, may be mentioned the vacuum tubes.

Thorium May Be Used Up

The precious thorium contained within the filament wire, and which accounts for the tube's amplifying properties, may have become used up, even tho the tube lights as nicely as ever. Defective tubes, instead of augmenting the incoming voltage impulses seven or eight times, may amplify them only three or four times—a decrease great enough to cut out many faint stations altogether.

Run-down batteries are, of course, a very prolific source of dropping sensitiveness. Every listener who has a set with more than two tubes ought to possess a voltmeter, even if it's only a simple and low-priced one, to test dry cell batteries used for either A or B purposes.

When a 22½-volt unit falls to 19 volts, replace it and when a 45-volt unit reads 38 or under, get another. Keeping them longer will not only give less volume, less DX reception and poorer tone qualities, but will ordinarily cause rasping sounds in the loud speaker on account of chemical decomposition within the battery.

New and Old Batteries in Series

Contrary to popular notion, it does no harm to new B batteries to hook them in series with old ones. Hence it is often possible to replace only one of the two 45-volt units. In the case of dry cell A batteries, however, the best practice is to get a whole new set at once. Never connect an old and a new dry cell A battery in parallel as one will discharge into the other.

Dust, dirt and moisture must be removed from the interior of the set if efficiency is not to be impaired. Use a blower or small brush to get it off coils and sockets. If you suspect moisture, and the coils are not of the best air-spaced construction, stand the set with its lid open in a very warm place for a while. Where moisture is removed by this drying process a great volume increase results. The writer has often succeeded in doubling the reception power of simple home made sets that had absorbed moisture by simply standing them on the radiator for a while to dry out. This is especially true in damp regions and during foggy, wet periods.

As far as the aerial is concerned, little need be done except to wash, clean and rinse thoroly the insulators which separate the aerial wire from trees, poles, buildings, etc. This applies also to the lightning arrestor and to the lead-in insulator.—B. F.

Your Grandaddy built that fence

Leadclad Fence is built for generations of service. It is protected from wear and weather by a jacket of imperishable lead, seven times heavier than the zinc coating on ordinary fence.

When you put up Leadclad Fence, it is up for good. Even your children will not have replace expenses.

The pure lead jacket of Leadclad is not affected by heat, frost or moisture. It is the most effective rust resistant possible for wire fence. The small illustration at the side shows how thick and tough the protecting lead jacket is. Read what Mr. Berry says of his experience with Leadclad—

Leadclad Wire Co.,
Moundsville, W. Va.

Gentlemen: Four years ago I bought 20 rods of your Leadclad Poultry Fence to fence a lot in a locality of coal mines and near a large smelter plant, where fence never lasted over two or three years.

After 4 years the Leadclad Poultry Fence is apparently as good as the day I put it up. The heavy lead coat, if anything, has taken on a film or added coat, which I believe it natural for lead to do, and it adds a further protection. This is sufficient proof for me. If I ever build a galvanized fence again it will be because I can't get Leadclad.

J. M. BERRY.

THICK TOUGH

Take a knife and shave a piece of LEADCLAD wire. Note how thick the pure lead jacket is. You can't scrape all the lead off, even with a sharp knife. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

Leadclad Fence is sold to you at a single profit, direct from the factory basis. We pay the freight and allow 5% discount on club orders.

Sign the coupon and send it in for samples of Leadclad wire and full information.

World's Record *made with* EMPIRE MILKER

Lucia Kent's Ola, milked with an Empire Milker, recently smashed all previous 305-day records for Jerseys over 12 years of age by 33.58 lbs. of butter fat. She finished 365 days with 766 lbs. of fat and 14,807 lbs. of milk, a record for Class AAA cows.

M. P. Ladd, Worcester, Vt., official tester for these records, writes: January 9th 1926

"I commenced doing official testing a little over a year ago and have made a world's record, a state record, two gold medals and a silver medal. They were all milked with the Empire for the entire year."

The above speaks well for the efficiency of Empire Milkers; but you don't need to go out after world's records to get full benefit from an Empire. If you have six or more cows and are milking by hand—an Empire will actually make you more money. Let us send our booklet—*"How to Milk for Bigger Profits"* and explain our new Deferred Payment Plan—which lets an Empire Milker pay for itself out of profits while it is working for you.

A SIZE FOR EVERY DAIRY—FOR ANY KIND OF POWER

Full Pails
demand health in Udder and Teats

When you finish the milking with a disappointment that comes with the poorly-filled pail—be sure the trouble is not right under your very eyes.

Remember this—cows are nervous, sensitive animals. The slightest discomfort of the udder or teats is extra annoying during milking. The milk is held back—lost to you as surely as if the cow lacked the ability to produce.

Fight udder troubles constantly. Fight them the way the best dairymen in the country now do—with their can of Bag Balm, the great healing ointment. Bag Balm is a rapid antiseptic healer of all sores or hurts, chaps, cracked teats, inflammation of the udder, caked bag, bunches, cow pox, etc. It is clean and pleasant to use—cannot taint the milk. For any animal sore or skin trouble Bag Balm is sure relief.

Be sure to keep Bag Balm on hand and use it liberally to keep your cows comfortable. Big 10-ounce package 60c at feed dealers, general stores or druggists. If your dealer is not supplied order direct from us. We pay postage. Booklet, "Dairy Wrinkles" free on request.

UNADILLA

Not a One Year Investment!

With grain prices sky high and your Unadilla filled with succulent, productive silage, you can enjoy a feeling of real security.

And a Unadilla *lasts so long, is so strong, so durable* that if you spread the first cost over the years it is in use, you'll find your yearly cost *out of all proportion* to the money you save by using silage.

It isn't so much can you afford to own a Unadilla—it's can you afford *not* to own one?

For years now, we've been making Unadilla silos. We put the result of these years in *every single silo.* We are perfectly fair in saying: You can't possibly buy as *good a silo anywhere near the cost* of a Unadilla, nor a better one at any price.

Write for our big illustrated catalog. It tells the story in detail and gives some information on our full line of storage tanks, water tubs and vats.

Liberal discount for cash.

More Money for Tuberculosis Eradication

IT WAS thru the active interest of the farmers of the state who supported the officers of the Pennsylvania Council of Farm Organizations that an increase in appropriations for the tuberculosis eradication work from $750,000, as recommended by the Governor's budget, to $2,099,000 was secured.

The demand for tuberculosis eradication has increased so rapidly that the appropriations of the state are far in excess of the amounts available from the federal government. Under the adoption of the accredited plan the work was to be done on a fifty-fifty basis. At the present time the farmers of Pennsylvania get one dollar of federal money for about five dollars of state funds.

In the present Congress the budget from the Agricultural Department recommended $2,900,000. This was so far short of the original fifty-fifty plan, that a hearing was granted on the request of the farmers, and delegates from many states appeared at this hearing.

It is gratifying to know that Pennsylvania had the largest delegation of any state, including Secretary Willits, Mrs. John F. Hice, president of the Society of Farm Women; Robert Balderston, secretary Inter-State Milk Producers' Association; Albert Fox, secretary Pennsylvania Jersey Breeders' Association; Elmer Cliffinger, Secretary of the Pennsylvania Farm Bureau Federation, and Morris T. Phillips, president Pennsylvania Council of Farm Organizations.

Putting Theories Into Practice

Boys of the Vocational High School, Milford, Delaware, making a concrete walk on the school property.

Farmers Call on the Secretary

Members of the farmers' committee called upon the Secretary of Agriculture with the hope of getting him to make a supplementary request for additional appropriation, which, however, the Secretary informed the committee it would not be possible to do.

The committee then called upon George Wharton Pepper, senior United States Senator from Pennsylvania, who, after hearing about the necessity for additional funds, assumed direction of the work of the committee in obtaining an additional appropriation. Thru his active efforts he has succeeded in having the Appropriation Committee of the Senate recommend $6,000,000 for indemnities, of which $1,000,000 is to be immediately available. This is an increase of $3,000,000 above the recommendation of the House Appropriations Committee. If the amended bill becomes a law, this money will go directly to the farmers of the country, and Pennsylvania farmers will get their proper share.

From Senator Pepper's Statement

The following extract of Senator Pepper's statement before the subcommittee of the Committee on Appropriations of the Senate, taken from the Congressional Record, shows the interest and intimate knowledge that Senator Pepper has of this important public problem:

"In many instances farmers—especially dairymen—are being driven into the testing of their cattle by city and town ordinances which require that no milk shall be sold from other than tuberculin-tested cattle. This is done in the interests of public health, and while most of the farmers acknowledge the need for the ordinances, they are not all prepared to make the financial sacrifice which condemnation of diseased cattle requires. If, to protect society at large, tuberculous cattle are condemned and destroyed, then the owners should receive compensation. The public at large, rather than farmers alone, should carry the expense. But to provide for this, additional funds must be made available."

Average Federal Indemnity

"The average federal indemnity recently paid is approximately $16 per animal, and the average number of cattle in each claim is three. The average claim thus amounts to $48. The appropriation for this year of $2,578,000 will be distributed among approximately 54,000 farmers. These owners are distributed among all the states where indemnity is paid, namely 43, and the campaign is in operation in every commonwealth."

"It is plain that for economic reasons and also for public health considerations, this work of eradicating tuberculosis from livestock merits liberal and ample federal support. The states have recognized that it is money well spent to deal vigorously with this dread disease of livestock which meat inspection records show is the most serious of all maladies affecting our domestic animals. The agricultural press also representing rural opinion, urges more liberal federal funds so this useful and necessary work will not be hampered and retarded."

Money Wisely Spent

"The money spent thus far has been wisely expended. The results speak for themselves and in addition we have human health benefits not to be counted in dollars and cents. This enterprise merits more liberal federal support during the coming year in the light of the foregoing evidence and reasons."

It is interesting to note that there was an increase in appropriation for indemnity for cattle in Pennsylvania of $1,349,000 above the recommendation of the Governor's budget, and that there is now recommended by the Appropriations Committee of the Senate an increase over the Budget recommendation of $3,100,000.

This is an illustration of what can be done by close cooperation of the farmer with sympathetic representatives in Congress and in the state Legislature. I hope this cooperation will be continued for the future good of the farmers and agricultural interest of the state.—Morris T. Phillips, President, Pennsylvania Council of Farm Organizations.

Does the Work of 10 Men!

WICO Magneto Equipped
Built and Guaranteed by WITTE

Saws Wood Fast

This one-profit WITTE Log Saw uses Kerosene, Gas-Oil, Distillate or Gasoline and will cut from 10 to 25 cords of wood a day. Easy to operate and move. New device makes easy starting in any temperature. Trouble-proof. Fells trees and saws them into blocks—runs other farm machinery. Fast money maker and big labor saver. Completely equipped with WICO Magneto, speed and power regulator, throttling governor and 2 fly wheels.

Change to Tree Saw in 3 Minutes Ten seconds to clamp on tree. Saws them down level to the ground.

"Felled fifty 18-inch trees in less than 5 hours."
Earl McBurney, Iowa.

30 Days' FREE TRIAL—Lifetime Guarantee Sold direct from factory to you. An all-purpose outfit for any farm use. Engine can be attached to pumps, grinders, etc.

How Long Should Engines Last?

We don't know yet. Many Fuller & Johnson Engines that have been in use for 20 years or more are still running fine.

For example: Mr. A. E. Cattermole, one of our Iowa dealers, writes:

"We have a great many Fuller & Johnson Engines in our territory running 18 and 19 years; and one we believe hasn't missed a day running in about 22 years."

That's because Fuller & Johnson Engines are *designed* and *built* to give this *longer* service at a big additional saving in fuel and maintenance cost.

Our 1926 Models are fully described in bulletin 430. Gladly sent to power users on request.

Two Litters a Year

Do you think that I can raise two litters of pigs each year successfully from one sow? How should such sows be managed?—R. C. J., Bucks County, Pa.

Two litters a year can be successfully raised in most sections of Pennsylvania. It is the most economical way to produce pork on the average farm. If only a small number of brood sows are kept it is the only way to secure the best returns from growing swine. On some farms, where a large number of hogs are produced it is a common practice to breed all the brood sows for spring farrowing and only a part of the sows for fall farrowing.

The Reason of the Practice

The reason for following this practice is that it is more difficult to grow the large number of fall litters with the same equipment used for spring farrowing. When only a few sows are kept they should all be required to raise two litters per year. The most desirable method of handling the sows is to wean the spring litter when the pigs are from seven to eight weeks old. The sows that are suckling small pigs should be well fed so as to keep them in good condition. If the spring pigs are farrowed during the latter part of March the pigs can be weaned before the first of June and the sows bred to farrow by the middle of September. If the sows can be bred to farrow the first two weeks in September, this should be done as the early fall pigs will usually develop better than the late pigs.

The fall pigs should be given a good start before cold weather sets in and there will be no difficulty raising fall pigs. They will probably cost a little more to produce than spring pigs but as a rule the market is higher when the fall crop is marketed than when the spring crop comes on the market.—W. H. Tomhave.

Raising Farm Colts

I have three farm mares that weigh about 1400 pounds. These mares are six years old and are worked on the farm. Do you think it will pay to breed them this spring and raise some colts? There is a good purebred stallion in the county but the service charges are $15. Will it pay us to take the mares to this stallion? Do you think it will pay to raise colts during the next year?—R. O. W., Berks County, Pa.

It is unfortunate that more mares of this type and weight are not bred each year and farm colts produced. During the past few years there has been a very marked falling off in the number of mares that have been bred and the result is a shortage of good young horses. The breeding of horses during the last few years has not been kept up to the normal replacement requirements. Present indications and trend of the horse market seem to indicate a general shortage of good draft horses.

Should Be Profitable Venture

Breeding the 1400-pound mares to a good purebred draft stallion should be a very profitable venture. The mares will raise the colts and it will not interfere seriously with the farm work. The colts can be developed on the farm without very much additional labor so that the principal outlay will be for feed, the most of which can be produced on the farm. When the colts are old enough to go to work they can be used to replace some of the old horses on the farm or they can be sold on the market to good advantage.

The service fee of $15 is not unreasonable. As a matter of fact it is hardly high enough for a high-class draft stallion. It will pay to breed the mares to a good purebred stallion at a fee of from $15 to $25 in preference to a lower fee for a poor horse.—W. H. Tomhave.

Dock All the Lambs

EVERY year we find a good many farmers who fail to dock and castrate the market lambs. These farmers fail to derive the maximum profits from their sheep raising operations because of this carelessness in management.

Lambs that are allowed to develop as buck lambs and come to market without being docked are usually sold several cents per pound below lambs that are castrated and docked. Castrated lambs will develop more uniformly and produce a far more attractive carcass than buck lambs. They are also more easily fattened and will be ready for market at an early age. A flock of lambs that have been docked is much more attractive than a lot of lambs with long tails. The tail of the undocked lamb becomes laden with manure during wet weather, resulting in trouble with flies.

Not Difficult Operation

The docking and castrating is a simple operation and should be performed when the lambs are from one to three weeks of age. There is a difference of opinion among sheep men about performing both operations at the same time. Experiments conducted at several experiment stations seem to indicate that it is economical and practical to both dock and castrate the lambs at the same time.

The instrument to use for docking lambs varies. Some people use a clean, sharp, sterilized knife, while others prefer the hot docking iron. The advocates of the docking iron seem to feel that there is less loss of blood compared with the sharp knife, while the people that use the knife claim there is less danger of infection when a clean knife is used. Either method will give satisfactory results and is much better than to let the lambs go undocked.

If all the farmers could be induced to castrate and dock the male lambs on the farm and dock all ewe lambs that are produced the quality of the lambs reaching the central market would be very much improved.—W. H. Tomhave.

Enrolled for 1926, Too

TON litters produced on the farm of Peters Brothers, Stormstown, in 1924 and 1925 have convinced the brothers that it pays to feed hogs the ton litter club way and they have enrolled eleven sows in the 1926 Keystone Ton Litter Club.

If the litters from the eleven sows are all large enough to make a good showing, all will be nominated. The Peters usually sell a large number of the pigs farrowed to neighbors for feeding purposes. This year they plan to make sales from the smaller litters only, keeping the larger ones for the ton litter club.

Reports from many sections of the state indicate a greater interest in ton litters than ever.

Improved-Better than Ever Low in Price

New cross-tie makes the Crasco a better silo than ever. *Yet it costs no more!*

ICE-BOUND HEARTS

By James Oliver Curwood

HOW THE STORY STARTED

AT POINT FULLERTON, 1000 miles north of civilization, Sergeant William MacVeigh concluded his semi-annual report to the commissioner of the Royal Northwest Mounted Police. "I have made every effort to run down Scottie Deane, the murderer. I have not given up hope of finding him, but I believe that he has gone from my territory. . . ." On his bunk in a corner of the little cabin lay his comrade, Private Pelletier, sick, almost to madness after nine months of loneliness.

Half an hour later MacVeigh set out for Fort Churchill, 450 miles across the ice to deliver the report, get medicines and letters for Pelletier from the girl back home. While in Churchill a halfbreed brought word he'd seen a white man and woman ten miles south of the Maguse River. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. Billy promised to see her safely to her destination, the Little Seal. Before pitching her tent he scattered bakneesh vine over the box "in honor of the dead," then, the tent pitched, drew the box in. When he awoke late next morning the bakneesh wreath hung on his tent "in honor of the living." In the woman's tent her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer Scottie Deane.

There was a price on his head and fame for the man who captured him, but Scottie was more than an outlaw to Billy now and Pelletier was ill. He must return to him. But the storm drove him back and suddenly he heard a man's voice and there appeared a team of dogs, a sledge, and three men. The next thing Billy knew Bucky Smith had leveled a revolver at him. Bucky hated Billy for there once had been a fight and Billy had proved himself the better man. The party was out in search of Scottie Deane. Tired out they rested while Billy watched the fire.

(Continued from last week)

FIFTEEN minutes later Billy approached the tent and looked in. The three men were in the deep sleep of exhaustion. Instantly Billy's actions changed. He had thrown his pack outside the tent to make more room, and he quickly slipped a spare blanket in with his provisions. Then he entered the other tent, and a flush spread over his face, and he felt his blood grow warmer.

"You may be a fool, Billy MacVeigh," he laughed softly. "You may be a fool—but we're going to do it!"

Gently he disentangled the long, silken strands of golden brown from the tent pole. He wound the hair about his fingers, and it made a soft and shining ring. It was all that he would ever possess of Isobel Deane, and his breath came more quickly as he pressed it for a moment to his rough and storm-beaten face. He put it in his pocket, carefully wrapped in Isobel's note, and then once more he went back to the tent in which the three men were sleeping. They had not moved.

Walker's holster was within reach of his hand. For a moment the temptation to reach out and pluck the gun from it was strong. He pulled himself away. He would win in this fight with Bucky as surely as he had won in the other, and he would win without theft. Quickly he threw his pack over his shoulder, and struck the trail made by Deane in his flight. On his snowshoes he followed it in a long, swift pace. A hundred yards from the camp he looked back for an instant. Then he turned, and his face was grim and set.

"If you've got to be caught it's not going to be by that outfit back there, Mr. Scottie Deane," he said to himself. "It's up to yours truly, and Billy MacVeigh is the man who can do the trick if he hasn't got a gun!"

From the first Billy could see the difficulty with which Deane and his dogs had made their way thru the soft drifts of snow piled up by the blizzard. In places, where the trees had thinned out, Deane had floundered ahead and pulled with the team. Only once in the first mile had Isobel climbed from the sledge, and that was where traces, toboggan and team had all become mixed up in the snow-covered top of a fallen tree.

THE fact that Deane was compelling his wife to ride added to Billy's liking for the man. It was probable that Isobel had not gone to sleep at all after her experience on the barren, but had lain awake, planning with her husband until the hour of their flight. If Isobel had been able to travel on snowshoes, Billy reasoned that Deane would have left the dogs behind, for in the deep, soft snow he could have made better time without them, and snowshoe trails would have been obliterated by the storm hours ago.

As it was, he could not lose them. He knew that he had no time to waste if he wished to make sure of beating out Bucky and his men. The suspicious corporal would not sleep long. While he had the advantage of being comparatively fresh, Billy's snowshoes were smoothing and packing the trail, and the others, if they followed, would be able to travel a mile or two an hour faster than he. That Bucky would follow, he did not doubt for a moment. The corporal was already half-convinced that Scottie Deane had made the trail from camp, and that the hair he had found entangled in the splinter on the tent-pole belonged to the outlaw's wife. And Scottie Deane was too big a prize to lose.

Billy's mind worked rapidly as he bent more determinedly to the pursuit. He knew that there were only two things that Bucky could do under the circumstances. He would either follow after him with Walker and the driver, or he would come alone. If Walker and Conway accompanied him, the fight for Scottie Deane's capture would be a fair one, and the man who first put manacles about the outlaw's wrists would be the victor. But if he left his two companions in camp, and came after him alone—

The thought was not a pleasant one. He was almost sorry that he had not taken Walker's gun. If Bucky came alone it would be with but one purpose in mind—to make sure of Scottie Deane by squaring up with him first.

Billy was sure that he measured the man right, and that he would not hesitate to carry out his old threat by putting a bullet into him at the first opportunity. The storm would cover up any foul work he might accomplish, and his reward would be Scottie Deane — unless Deane played too good a hand for him.

At thought of Deane Billy chuckled. Until now he had not taken him fully into consideration, and suddenly it dawned upon him that there was a bit of humor, as well as tragedy in the situation. He cheerfully conceded to himself that for a long time Deane had proved himself a better man than either Bucky or he, and that, after all, he was the man who held the situation well in hand even now.

He was well armed. He was as cautious as a fox, and would not be caught napping. And yet this thought filled Billy with satisfaction rather than fear. Deane would be more than a match for Bucky alone if he failed in beating out the corporal. But if he did beat him out—

Billy's lips set grimly, and there was a hard light in his eyes as he glanced back over his shoulder. He would not only beat him out, but he would capture Scottie Deane. It would be a game of fox against fox, and he would win. No one would ever know why he was playing the game as he had planned to play it. Bucky would never follow. Down at headquarters they would never know. And yet, deep down in his heart, he hoped and believed that Isobel would guess and understand.

To save Deane, to save Isobel, he must keep them out of the hands of Bucky Smith, and to do that he must make them his own prisoners. It would be a terrible ordeal at first. A picture of Isobel rose before him, her faith and trust in him broken, her face white and drawn with grief and despair, her blue eyes flashing at him—hatred. But he felt now that he could stand those things. One moment—the final moment—when she would understand, and know he had remained true, would repay him for what he might suffer.

HE TRAVELED swiftly for an hour, and paused then to get his wind where the partly covered trail dipped down into a swamp. Here Isobel had climbed from the sledge and had followed in the path of the toboggan. In places where the spruce and balsam were thick overhead, Billy could make out the imprints of her moccasins. Deane had led the dogs in the darkness of the storm, and twice Billy found the burned ends of matches where he had stopped to look at his compass. He was striking a course almost due west.

At the farther edge of the swamp the trail struck a lake, and straight across this Deane had led his team. The worst of the storm was over now. The wind was slowly shifting to the south and east, and the fine, steely snow had given place to a thicker and softer downfall. Billy shuddered as he thought of what this lake must have been a few hours before, when Isobel and Deane had crossed it, in the thick blackness of the blizzard that had swept it like a hurricane.

It was half a mile across the lake, and here, fifty yards from shore, the trail was completely covered. Billy lost no time by endeavoring to find signs of it in the open, but struck directly for the opposite timber-line, and swung along in the shelter of the scrub forest. He picked up the trail easily. Half an hour later he stopped. Spruce and balsam grew thick about him, shutting out what was left of the wind. Here Scottie Deane had stopped to build a fire. Close to the charred embers was a mass of balsam boughs, on which Isobel had rested. Scottie had made a pot of boiling tea, and had afterward thrown the grounds on the snow.

The warm bodies of the dogs had made smooth, round pits in the snow, and Billy figured that the fugitives had rested for a couple of hours. They had traveled eight miles thru the blizzard without a fire, and his heart was filled with a sickening pain as he thought of Isobel Deane and the suffering he had brought to her. For a few moments there swept over him a revulsion for that thing which he stood for—the law.

MORE than once in his experience he had thought its punishment had been greater than the crime. Isobel had suffered—and was suffering—far more than if Deane had been captured a year before, and hanged. And Deane himself had paid the penalty greater than death in being a witness of the suffering of the woman who had remained loyal to him. Billy's heart went out to them in a low, yearning cry as he looked at the balsam bed and the black char of the fire.

He wished that he could give them life, and freedom, and happiness, and his hands clenched tightly as he thought that he was willing to surrender everything, even to his own honor, for the woman whom he loved. Fifteen minutes after he had struck the shelter of the camp he was again in pursuit. His blood leaped a little excitedly when he found that Scottie Deane's trail was now almost as straight as a plumb-line, and that the sledge no longer became entangled in hidden windfalls and brush. It was proof that it was light when Deane and Isobel had left their camp. Isobel was walking now, and their sledge was traveling faster. Billy increased his own pace, and over two or three open spaces he broke into a long, swinging run. The trail was comparatively fresh, and at the end of another hour he knew that they could not be far ahead of him. He had followed thru a thin swamp, and had climbed to the top of a rough ridge, when he stopped. Isobel had reached the bald cap of the ridge, exhausted.

The last twenty yards he could see where Deane had assisted her, and then she had dropped down in the snow, and he had placed a blanket under her. They had taken a drink of tea made back over the fire, and a little of it had fallen into the snow. It had not yet formed ice, and instinctively he dropped behind a rock and looked down into the wooded valley at his feet. In a few moments he began to descend.

He had almost reached the foot of the ridge when he brought himself short with a sudden cry of horror. He had reached a point where the side of the ridge seemed to have broken off, leaving a precipitous wall. In a flash he realized what had happened. Deane and Isobel had descended upon a snow-trap, and it had given way under their weight, plunging them to the rocks below.

For no longer than a breath he stood still, and in that moment there came a sound from far behind that sent a strange thrill thru him. It was the howl of a dog. Bucky and his men were in close pursuit, and they were traveling with the team.

He swung a little to the left, to escape the edge of the trap and plunged recklessly to the bottom. Not until he saw where Scottie Deane and the team had dragged themselves from the snow-avalanche did he breathe freely again. Isobel was safe! He laughed in his joy, and wiped the nervous sweat from his face as he saw the prints of her moccasins where Deane had righted the sledge. And then for the first time he observed a number of small red stains on the snow. Either Isobel or Deane had been injured in the fall, perhaps slightly. A hundred yards from the trap the sledge had stopped again, and from this point it was Deane who rode—and Isobel who walked.

HE FOLLOWED more cautiously now. Another hundred yards and he stopped to sniff the air. Ahead of him the spruce and balsam grew close and thick, and from that shelter he was sure that something was coming to him on the air. At first he thought it was the odor of the balsam. A moment later he knew that it was smoke.

Force of habit brought his hand for the twentieth time to his empty holster. Its emptiness added to the caution with which he approached the thick spruce and balsam ahead of him. Taking advantage of a mass of low, snow-laden bushes, he swung out at a right angle to the trail, and began making a wide circle. He worked swiftly. Within half or three-quarters of an hour Bucky would reach the ridge. Whatever he accomplished must be done before then. Five minutes after leaving the trail he caught his first glimpse of smoke, and began to edge in toward the fire.

The stillness oppressed him. He drew nearer and nearer, yet he heard no sound of voice, or of the dogs. At last he reached a point where he could look out from behind a young groundspruce and see the fire. It was not more than thirty feet away. He held his breath tensely at what he saw. On a blanket spread out close to the fire lay Scottie Deane, his head pillowed on a packsack. There was no sign of Isobel, or of the sledge and dogs. Billy's heart thumped as he rose to his feet. He did not stop to ask himself where Isobel and the dogs had gone.

Deane was alone and lay with his back toward him. Fate could not have given him a better opportunity and his moccasined feet fell swiftly and quietly in the snow. He was within six feet of Scottie before the injured man heard him, and scarcely had the other moved before he was upon him. He was astonished at the ease with which he twisted Deane upon his back and put the handcuffs about his wrists. The work was no sooner done than he understood. A rag was tied about Deane's head, and it was stained with blood. The man's arms and body were limp. He looked at Billy with dulled eyes and as he slowly realized what had happened a low groan broke from his lips.

In an instant Billy was on his knee beside him. He had seen Deane twice before, over at Churchhill, but this was the first time that he had ever looked closely into his face. It was a face worn by hardships and mental torture. The cheeks were thinned, and the steel-gray eyes that looked up into Billy's were reddened by weeks and months of fighting against storm. It was the face, not of a criminal but of a man whom Billy would have trusted; blond-mustached, fearless, and filled with that clean-cut strength which associates itself with fairness and open fighting.

Hardly had he drawn a second breath when Billy realized why this man had not killed him when he had the chance. Deane was not of the sort to strike in the dark, or from behind. He had let Billy live because he still believed in the manhood of man, and the thought that he had repaid Deane's faith in him by leaping upon him when he was down and wounded filled Billy with a bitter shame. He gripped one of Deane's hands in his own.

It was a sunshiny Sunday morning and Pat had brought his shaving tools out on the back porch.

Mrs. McGinnis looked over the back fence. "Shure, Mrs. Murphy, does your old man shave on the outside?"

"And phawt's bothering you," said Mrs Murphy, "Did you think he was fur lined?"

News and Notes

A MAN who had eight dogs and nine children recently was arrested for not having the dogs licensed. The Pennsylvania Bureau of Animal Industry refused to accept the excuse that he was too poor to buy licenses.

* * *

It is now possible to mail a letter in New York City and receive an answer from San Francisco in about seventy-eight hours, the letters making the trip across the continent and back by airplane mail. The fastest trains require ninety hours to make the trip only one way.

* * *

More than 290,000,000 pounds of whole milk were used in the manufacture of milk chocolate in this country last year. This is more milk than was produced by all the dairy cows in Delaware, Rhode Island and Nevada, considering the average production in those states to be 4000 pounds per cow.

* * *

A million pounds of snails are eaten in the United States in a year. Most of them are imported from France and Italy where they are raised in cellars and fed on milk and flour.

* * *

A Pennsylvania coal mining company uses a belt conveyor system four miles long to carry 10,000 tons of coal a day thru a mountain from the mine to the place where it is loaded onto barges. This great river of coal speeds up the four mile grade at a rate of 500 feet per minute, the wide conveyor belts being driven by a series of electric motors.

* * *

A glass lined tank car, built on the principle of the vacuum bottle, recently carried 3000 gallons of milk from Wisconsin to Miami, Florida. The milk was pumped into the car at a temperature of thirty-five degrees. When it was pumped out four days later in tropical Florida the temperature had gone up only one degree. The Miami people were so pleased with this milk from tuberculin tested cows that it is planned to put ten similar cars into service between Wisconsin and Florida very soon.

* * *

Man isn't the only enemy of the familiar tent caterpillar which has done so much damage in southeastern Pennsylvania during the last four years. At least thirty parasites are known to attack this insect. The parasites are much more active in some sections than in others, which accounts, in part, for the spotty nature of the caterpillar infestation.

A SURE, SAFE way to get FRESH running water with pressure

ADVISORY SERVICE — GUARANTEED DURO — MADE BY THE DURO PUMP AND MANUFACTURING CO.

And this is the Way

Make a list of plumbing fixtures you desire—bath tubs, shower baths, lavatories, kitchen sinks, laundry tubs, toilets, lawn or garage connections, etc.

Get both horizontal and vertical distances from source of water supply to point where pump will be located. Then see the nearest authorized Duro dealer or write the Duro Advisory Service.

Duro is more than a manufacturer of Automatic Water Systems and Water Softeners. Its representatives and dealers are factory trained. They are specialists in water supply. They can render you a service that is really helpful.

DURO VERTITANK
Complete Unit $125. Pumping capacity 200 gals. per hour. Larger systems up to 2,100 gals. per hour capacity. Smaller systems priced as low as
$79.50
f.o.b. Dayton

Put Your Problems Up To Duro
THE DURO COMPANY
1203 Monument Ave. Dayton, Ohio
Largest Manufacturers of Water Systems and Water Softeners Exclusively.

DURO Pressure Water Systems

and Automatic Water Softeners

Duro Guarantees Satisfactory Water Service

Eureka Potato Machines

Make Money for Potato Growers

Eureka Potato Machines take hard work out of potato growing. They reduce time and labor costs. They assure bigger yields.

Potato Cutter Cuts uniform seed. Operates with both hands free for feeding.

Potato Planter One man machines doing five operations in one. Over twenty-three years' success.

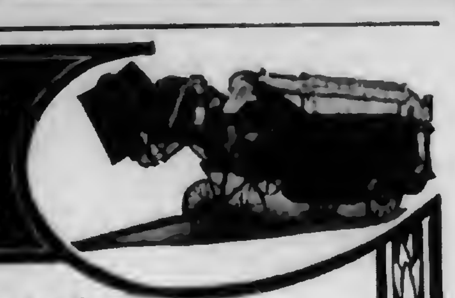
Traction Sprayer Insures the crop. Sizes, 4 or 6 rows. 60 to 100 gallon tanks. Many styles of booms.

Riding Mulcher Breaks crusts, mulches soil, and kills weeds when potato crop is young and tender. 8, 10 and 12 ft. sizes. Many other uses, with or without seeding attachment.

Potato Digger Famous for getting all the potatoes, separating and standing hard use. With or without engine attachment or tractor attachment.

All machines in stock near you *Send for complete catalogue*

EUREKA MOWER CO. Box 1120, Utica, N. Y.



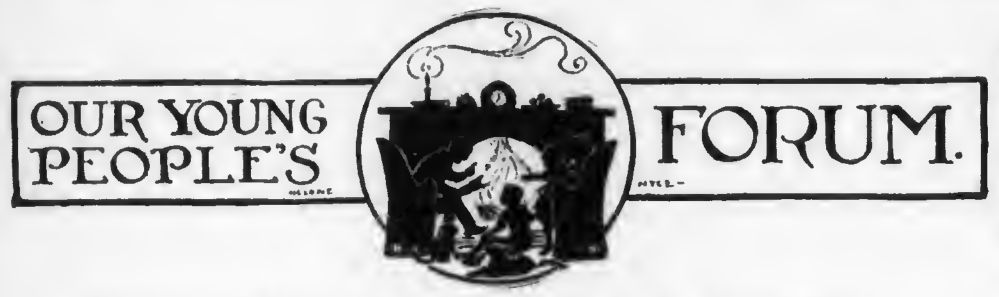
FARQUHAR GRAIN THRESHERS

May Be Operated by Farm Power

The "Farquhar Junior" Thresher is designed and constructed in full accord with the best experience of thousands of threshermen who have made money operating a threshing rig. Has a capacity of about 50 bu. per hour of average wheat when driven by the farm tractor or other light power. Equipped with hand or self feeder, straw carrier or wind stacker.

Write for illustrated Bulletin giving full information. Learn how easily you can thresh your own crop when it suits you best—thresh for your neighbors and thus make more days work for your tractor. We also build a tractor press for baling Hay and Straw.

Box 546 A. B. FARQUHAR, Limited YORK, PA.



OUR YOUNG PEOPLE'S FORUM.

Results of Contest—A Word to the Wise

HOW the answers to the Incomplete Sentence Contest did come pouring in after the contest was announced. I felt like a regular "school-marm" by the time I'd read over every one of those 284, hunting mistakes, and finding them.

Nearly all who tried to find the missing words succeeded, and most of you found the correct pages, but nearly all made some little, careless mistake that made it necessary for me to throw out many of the papers. Some of the writers of the very neatest answers put an "a" for a "the," or forgot to put the apostrophe where it belonged, or neglected to underscore the words put in in place of the blanks, or weren't careful to copy the correct spelling of some very common word like "vegetables."

Those who received the prizes and honorable mention sent in correct papers—and I want to congratulate them. I hope that those of you who were a bit hasty in copying, and made mistakes that needn't have been made, will be more careful another time. If you're careful in contests you'll be more careful in school work and more care there means better grades.

What shall our next contest be? Let me have some ideas from you.

COUSIN RUTH.

Prize Winners

First Group (Twelve and over)

1. Lillian Alcorn (X), Westmoreland County, Pa.
2. Fred D. Carter (X), Delaware County, N. Y.
3. Annabel Bonzo (X), Lawrence County, Pa.

Second Group (Under twelve)

1. Marie Garstecke (X), Fayette County, Pa.
2. Dorothy M. Hill (X), Mercer County, N. J.

Sara Gelnett (X), Perry County, Pa.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—We have a white kitten, a little terrier dog and a black goat for pets. The goat will pull a wagon around for us. We have lots of fun with him. His name is Charlie.

When there is snow, the neighbor children come over and we go coasting on the hill near our home.

Here is my fudge recipe. I call it "Best Ever" Fudge because it always gets so good.

Melt ¼ cup of butter, add
1 cupful white sugar
1 cupful brown sugar
¼ cupful molasses
¼ cupful cream
Boil two or three minutes, then add two squares of scraped chocolate. Boil five minutes then remove from the fire and add one-half teaspoonful of vanilla. Beat until it thickens and pour in a buttered pan.—Pearl N. Astheimer, twelve (X), Montgomery County, Pa.

MY BROTHERS, TONY AND CHARLES
Myrtle Kane, Broome Co., N. Y.

Dear Cousin Ruth:—We have nine little pigs and five cats. One is a real pet, his name is Teddy. Every time I milk he comes to the stable and sits beside me. When he comes in the house he is sure to nest himself in the old arm chair and if some one is on the chair, he will cry. We have about 300 chickens. The other night we got 160 eggs.

Spring will soon be here. I saw a large flock of blackbirds in our orchard, and my brother saw a robin the other week. I am not going to school this winter. I am busy making patchwork for a quilt. How many like to make quilts? My big brother made a beautiful one, wish you could see it. My grandma is quilting it for him. I love to plant flowers and seeds in the spring.—Florence Mae Lehman, sixteen (X), York County, Pa.

Dear Cousin Ruth and Forum Friends:—Don't you love to study Nature? I do. I like to collect things: butterflies, stones, flowers and tree twigs. I am in seventh grade. Here is a nature question, can you answer it, Forum friends?

The plant grows in the meadows and pasture lands. If you break a leaf or break the stem off you will find it filled with a white sticky substance. When young the plant is used as a green. It is from two to three feet high when full grown. In the summer days it bears a fragrant purple flower made up of many tiny clusters such as those on a lilac bush. In the fall the flower has changed to a green pod. If not picked the pods burst open and the seeds blow away. There is a kind of butterfly that feeds only on that plant. The answer is milkweed. Did you guess it?—Esther Rowland (X), Albany County, N. Y.

Honorable Mention

First Group

Pearl Asthelmer (X), Montgomery County, Pa
Charles Burrows (X), New Castle County, Del.
Elizabeth Dill (X), Kent County, Md.
Elizabeth Lamonaca (X), Atlantic County, N. J.
Helen T. Walker (X), Armstrong County, Pa.
Jean Williams (X), Centre County, Pa.
Mabel Wilson (X), Carroll County, Md.

Second Group

Valentine A. Lang (X), Bucks County, Pa.
Ruth V. Patterson (X), Allegheny County, Pa.

Dear Cousin Ruth:—Cousin Ruth, wouldn't it be fun to have Forum locals? That is, several boys and girls in a community join the big Forum, then club together and have meetings. We could elect officers and could write letters, as a club, to the big Forum. The different locals could write to one another, too. What do you think of this idea? Is it possible?—Edith E. Thomas, thirteen (X), Washington County, Pa.

I think this is a very good idea but I don't know whether it's possible or not! Let's hear what other Forum friends think of the idea. I'll help you all I can tho I'm afraid I won't have time to do all I'd like.

COUSIN RUTH.

Dear Forum Friends:—I'm in the sixth grade. There are four boys and five girls in my class. I learn a poem every month.

I help milk in the morning before I go to school and in the evening after I come home from school. We have six cows. I was very busy trapping but by and by the last of February came and I had to take my traps away. I did better in trapping this year than I ever did.—Cyrus A. Shaffer, eleven (X), Somerset County, Pa.

I'm glad this was a good trapping season for you. What all did you catch?

COUSIN RUTH.

Dear Cousin Ruth:—I can assure you I had one grand old time looking up the missing words of the contest. It sure was fun for me. I got stuck on some and was going to give up, but mother would say "don't give up till you are sure you can't find them." I tried once more and succeeded.

MY BROTHER AND HIS CALF
Bernardine Guillaume, Lycoming Co., Pa.

I was just trying to ski, but oh! dear me, if I didn't fall down a half dozen times.

I just wonder what is the matter with Lackawanna County boys and girls? Cousin Ruth, could you prescribe something to wake them up?

I live upon a hill where the sleigh-riding is wonderful now. I always have plenty of friends come over and we sure do have a jolly time. I wish some of the city cousins could share the joy with me. We go out on moonlight nights and sleigh ride till midnight. We also have a large hill at our school and we have a great deal of fun during noon hour.—Doris Petrylak (X), Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—We have a sugar camp. We were boiling last week. Cousin Ruth, I wish you could be here and help me enjoy the fun we have when we are boiling molasses. When we are making taffy we have good times. Cousin Ruth, I wish you could be here then.

We have a large farm. We have three cats and an Airedale dog whose name is Towser.—Mae Spangler, thirteen (X), Somerset County, Pa.

And so do I wish I could be with you when you're boiling molasses. I've never been in a sugar camp when it's the busy season, so you know that if I could come I'd be interested in all that was going on.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Right now I know you are thinking about your gardens, what you will grow this spring and summer—you and Dad, of course. The letters in the little garden-plot at the end of this letter will prove to be something like the seed you put in the ground. If you work over them and watch carefully, you will soon be rewarded by having the name of a vegetable come peeping up. You may use any of the letters as many times as you want, but you must not use any other letters. There are ten vegetables whose names you will be able to spell with the letters I have given you. For instance: if you use the "T" and the "O" and the "M" and the "A," you can spell "TOMATO," using the "O" and the "T" twice, you see. When you have found all ten vegetables, send their names to me on a POSTCARD so that it reaches me by April 3rd. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the March 6 issue of Pennsylvania Farmer is: A LITTLE KNOWLEDGE IS A DANGEROUS THING.

The puzzle prize winners are: Raymond L. Binner, age 10, Strausstown, Pa.; George E. Deitz, age 10, Hellam, Pa.; Lulu Gombert, age 11, Andreas, Pa.; Helen Keller, age 11, Lancaster, Pa.; Mary L. Lehman, age 10, Glen Rock, Pa.; Margaret L. Miller, age 9, Westminster, Md.; Marie A. Noss, age 11, Bridgeton, N. J.; Watson Rice, age 11, Mechanicsville, Pa.; Richard Stauffer, age 11, Palm, Pa.; Ralph Williams, age 11, York Springs, Pa.

Mrs. GERTRUDE S. STEWART

Cutting the Stocking Bill

The Plan That One Mother Follows with Success

"EVERY time I come to town I have to get stockings," sighed a friend who has three active youngsters in her family. "You might consider stockings a very small and insignificant item, but did you ever figure what it amounts to when you must buy several pairs of them every week or so?"

"Indeed I have! And that is just the reason that I studied this ever-present stocking problem until I succeeded in cutting our stocking bill nearly in half."

"I wish you'd tell me how you did it," said my troubled friend. "Seems to me I've tried every way. I've tried cheap stockings and find them constantly wearing out. I've tried expensive ones and while they wear better, the children are continually having accidents that tear and spoil an expensive pair of stockings just as quickly as an inexpensive one."

"That is true," I admitted. "And so I have found it best to keep between extremes, not the cheapest, not the most expensive, but a good, plain, substantial middle grade, especially for youngsters addicted to climbing trees and barn-rafters and coasting down brush-covered hillsides.

The Rule That Saves a Lot

"Here is a rule that will save a lot on the yearly stocking bill: Buy by brand or buy in quantity. Have all the everyday stockings of each member of the family alike. You will soon see the advantage if you try this. If John tears one of a good pair of stockings it does not then mean the ruin of a pair. Since they are all alike, sort the stockings by condition—that torn stocking can generally be mended and placed with another stocking in much the same condition; the good stocking can be mated with another good one and you have a pair that can be reserved to wear away from home.

"I find it worth while to sort my stockings according to season. In the case of children's stockings, if the feet are very badly worn they are cut off and replaced by new feet that can be bought for the purpose; these stockings are then reserved to be worn with ankle-height shoes which conceal the joining. When making this repair if the stockings are made with seamless legs it is worth while to turn them so that the part which came over the knee now comes at the back; even if the knee has to be patched it will not be noticed.

"My men refuse to wear patched stockings or socks in shoes but do not at all mind them when wearing felt or rubber boots. Every farm woman knows how hard rubber boots are on the best of stockings. By making it a rule to buy and wear new stockings during the summer season when shoes are worn almost constantly and laying aside the patched stockings for the time when boots are the rule, I save buying many pairs of work socks for the men.

Worn Shoes Wear Out Stockings

"Keep an eye on the condition of the family shoes. Nothing is harder on stockings than badly worn shoes. It is poor economy to get the last bit of wear from ragged shoes at the expense of good stockings. If, for some reason, the old shoes are to be worn, see that the old much-mended stockings are worn with them.

"Very few fine 'best' stockings will be needed if they are carefully cared for. Silk stockings should never be thrown into the wash or allowed to stand in a hamper of soiled clothes. It takes only a minute to wash them in a basin of warm water after wearing and they will repay such care by giving a surprising amount of service."—Alice Margaret Ashton, N. Y.

Give Every Child a Pet

GIVE every child a live pet, whether it be a lamb, an orphan pig or a mere bunny, that should be the aim of every parent. Every parent wants to raise strong, God-fearing, kindly children to be good citizens. In the development of such ideals, there is no one thing more helpful than owning live pets.

When a mere tad the boy in the picture became the proud, happy possessor of the rabbit he is holding. Never once was this rabbit wilfully neglected, nor unkindly treated. And hours that might otherwise have been spent away from home were spent playing with bunny at home. It participated in numerous games. Many times it was proudly displayed to little and big friends. Cutting grass, hunting "greens," feeding, and observing regular feeding hours and rations, never proved irksome. Fundamentals right there.

The best of friends.

Thoughtful of "Babe," Too

Grown taller and older by three years, this summer he visited his grandparents. In a scorching July sun he rode the old family mare 'round and 'round the yard, with his two tiny sisters "on behind." When they all slid from the horse's back, the boy led her to the shade, patting her. His first thought was for water—a fresh, cool drink for "Babe;" exclaiming, "Dad, that's worth five movie shows a week! I'd lots rather ride her than go!"

No, we're not stubbornly anti-movie but where would you—reckoning the future—rather your youngster be, at home happy with pets, under your surveillance, or away—at movies?

It's an age-old conclusion that a man who is good to his animals will kindly care for and love woman. What makes more towards happy homes filled with contented people? What one cares for, is never neglected. Neglect spells dissoluteness, ruin. ruin.

Give every child a live pet. Teach them self reliance, self esteem, method, thrift, kindness and love thru these creatures.—Gertrude Shockey, Ohio.

Why Piecrust Heaves

DEAR EDITOR:—Why does piecrust "heave up" into the filling of the pie sometimes? Is the crust too soft or is there something the matter with the baking?—V. M. B.

The reader's trouble with her piecrust "heaving up" is probably not in the baking but in putting the piecrust in the pan. I have noticed that if there are any air spaces under the crust when it is put in the pan, these small bubbles or puffs of air inflate when the filling is added and the pie put in the hot oven, causing the bottom crust to "heave up."

To avoid this, watch for these little puffs of air between the pan and the crust being sure to fit the crust carefully into the pan, pressing it down well. If you have stretched your crust too tight across the pan, loosen up the edges, let the air out, and press the crust down smooth all over. Of course, a very light or soft crust will rise more readily when there is air underneath it.

In baking pastry shells for cream, or any other kinds of pies that do not ooze, before baking always prick the bottom crust with a fork in a number of places.—Olga Clark, N. Y.

Unique Easter Eggs

YOU can do the most attractive things with good dyes, a tiny paint brush, and paraffin. Have the eggs to be colored boiled and cooled. Melt a small quantity of paraffin and write or print on the egg, using your liner brush dipped in the paraffin. The child's name or any appropriate greeting is bound to please. Pictures of chicks, rabbits or Easter flowers are easily made. The paraffin will harden and then the tinting follows.

Make your dye solution as follows:

1 teaspoon dye powder
2 cups boiling water
1 teaspoon vinegar

Stir until well dissolved and cool before using. Have all the colors you wish to use prepared in separate cups. Dip your paraffin decorated eggs in the color cup, and allow to remain several minutes. Rinse in cold water. Scrape off the paraffin, using a small knife, and you will be happy to see your design showing up in white.

Pretty color effects can be made by tinting eggs a very soft color first, then designing, and using the deep color in the final color bath. For instance, tint a dainty orange egg, decorate, and finish in russet or burnt orange; or tint a soft-toned violet with the deep color purple, and so on.—G. S. S.

Home Made Toys

ON STORMY days when the children are confined to the house, try fascinating them with toothpicks and peas, showing them how to make doll furniture and other toys. Soak the peas overnight, and they will allow the toothpicks to enter readily. Many a happy hour will drift quietly away while the dolls are provided with chairs, tables, beds, etc.—Mrs. Charles Wynick, Pa.

Prize Winning Hints

SEWING for four small children has taught me many things. One I think worthy of passing on is a quick and wise way to finish the sleeves of outing flannel nightgowns. I use the tops of little outgrown woolen stockings for cuffs. Cotton ones could be used as well. Cut them the width of a wristband and sew the cut edge to the bottom of the sleeve, stretching the stocking as you sew. This is easily done, and your sleeve requires neither hem nor facing. Another advantage is that the child's sleeve will not slip up as nightgown sleeves have a tendency to do.—Mrs. T. H. Ellsworth, Pa.

Delicious Apple Dessert

BAKED APPLE DUMPLING

2 cups flour
2 teaspoons baking powder
1 teaspoon salt
⅞ cup sweet milk
1 tablespoon shortening

Mix as you would biscuit dough, then roll out flat and spread with melted butter, two tablespoons of brown sugar and one tablespoon cinnamon. Grind the apples in food chopper.

THE DRESSING

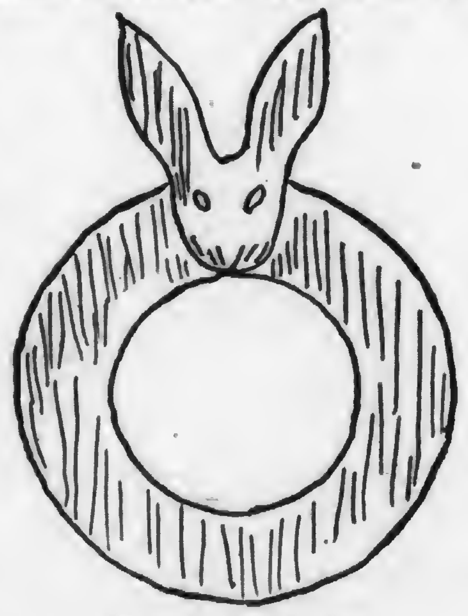
1 cup sugar
1 tablespoon butter
1 tablespoon flour
¼ teaspoon salt

Cook until smooth, and pour over the above which you have rolled and cut like cinnamon rolls. Bake in hot oven until they pass the usual toothpick test used with cakes.—Clara B. Lyon, Pa.

Editor's Note: Our contributor did not explain the place for apples, but in testing we had delicious results with two large apples to half the above recipe, spreading them thickly between the butter and sugar. Let me suggest that you allow at least an inch between rolls. Entire recipe makes twelve portions.

A Gift Easy to Make

THIS child's napkin ring is cut with a coping saw. Three-ply wood is very good, but any light wood will answer. Saw around the outside edge, first pasting this picture on the wood for your pattern. Then saw out the inner circle.



Child's napkin ring.

Paint the ring blue, the rabbit white with pink eyes and mouth, whiskers black. Decorate both sides.—Gertrude S. Stewart, N. J.

The Disobedience of Children

Respect Isn't Won by Threats and Bribes

WHETHER children are obedient or disobedient is to a great extent dependent on the standards and requirements of mothers and fathers.

While Tommy is deeply engrossed in play with his toys or in a new book the carelessly shouted orders of his mother, busy with her dish washing, may pass unheeded, such commands having become so familiar that he has developed the same negative adaptation to them as the stenographer develops toward the hammering of typewriters in a busy office. He may have heard the command and appreciated what was wanted, but experience may have taught him that a command ignored by him is one forgotten by his mother—so why should he worry?

Don't Be Inconsistent

There may, however, be some doubt in his mind what to expect, for on one day mother allows her unheeded request to drop unnoticed, while on the next day she may take time from her work to administer swift and sure punishment. Inconsistency in discipline keeps the child in a most upset state of mind, and soon his response to any request comes to depend on his interest in his immediate occupation and his willingness to take a chance.

It may be that Tommy is capitalizing his disobedience. Often he has heard mother say, after coaxing and pleading a while, "Now, if you eat your dinner like a nice boy, you may have some candy," or "If you stop making so much noise, you may have a penny." If Tommy has learned that such offers follow a lack of response to the first request, it is only natural he should wait until they are made before complying. By holding out, he may obtain greater material gain and also far more attention and interest. It is something to be distinguished, if only as the "despair" of the family.

Threats of action by policemen, "bogy men," and doctors is a most unfortunate method to use in obtaining obedience. Either they cause hampering, fear, and timidity or else at an early age the child comes to realize that they are idle and meaningless and turns them to his immediate advantage. Tommy may learn to play up fear of doctors, for instance, so that by an outburst of yelling and kicking he may avoid having his teeth cared for or his eyes examined.

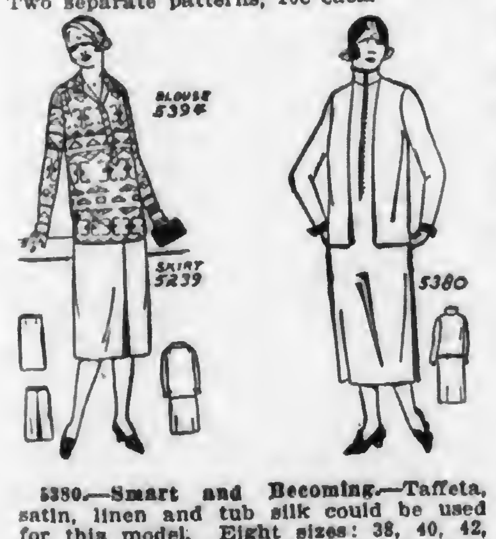
Easter Egg Nest

BOIL enough eggs to allow one for each person to be served. Cool slightly as soon as they have boiled hard. Cut only the whites in half lengthwise, being careful to preserve the yolks in wholes. Butter your serving bowl, and cut the whites in long narrow strips onto it. Place the whole yolks in the center, shaping the center to appear like eggs in a nest. Set aside in the warming oven. When ready to serve pour over the whites a white sauce, allowing one cup sauce to six eggs. Do not cover the yolks. Parsley garnish adds an appetizing spring touch.—Gertrude S. Stewart, N. J.

New Easter Outfits for All

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5394 - 5239.—Sports Ensemble.—The blouse is of metal brocade. It is also suitable for crepe, satin or georgette. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 2⅛ yards of 40-inch material with ⅝ yard of contrasting material for facings on front and on cuffs. The skirt may be of velvet, chiffon, broadcloth or kasha. It is cut in 7 sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29-inch size will require 1½ yard of 54-inch material. The width at the lower edge with plaits extended is 1¾ yard. Two separate patterns, 10c each.

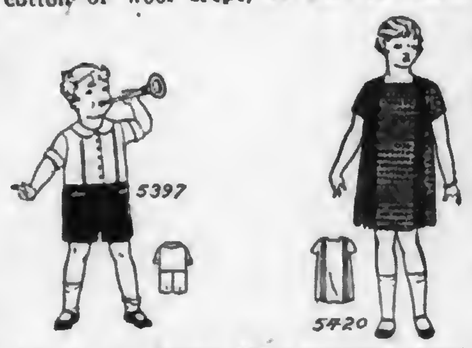


5380.—Smart and Becoming.—Taffeta, satin, linen and tub silk could be used for this model. Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size, if made as illustrated will require 5 yards of 40-inch material, with ¼ yard of contrasting material for facings on cuffs, turnover and vestee. The width of the dress at the lower edge with plaits extended is 2⅛ yards. Pattern, 10 cents.

5397.—Blouse Suit.—The blouse and trousers may be of one material or the blouse may be of contrasting material. Broadcloth and velvet are here combined. Four sizes: 2, 3, 4 and 5 years. To make as illustrated for a two-year size will require 1 yard for the blouse and ⅞ yard for the trousers of 36-inch material. Pattern, 10 cents.

5420.—Simple Dress.—This is a good style for tub silk, challis, gingham and percale. Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1⅝ yard of 36-inch material. Pattern, 10 cents.

5390.—Popular Style.—Figured woolen, cotton or wool crepe, as well as jersey weaves and flannel are excellent materials for this design. Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2⅝ yards of 40-inch material with ¼ yard of contrasting material for facing on tab and collar. Pattern, 10 cents.



5421.—A Smart Frock.—Wool rep and taffeta are here combined. The dress is also good for cashmere weaves, for tub silk and gingham. The bolero may be omittted. Pockets are inserted at the hip bands. Four sizes: 8, 10, 12 and 14 years. To make the dress as illustrated for a 10-year size will require ⅝ yard of taffeta 40 inches wide for collar facing and front of the waist, and 2⅜ yards of wool rep 40 inches wide for skirt, short sleeves, bolero, back of waist and under-portion of collar. If made without bolero ¼ yard less of the rep is required. If made with long sleeves, 2⅝ yards of the rep is required. Pattern, 10 cents.

Plant Trees With Certifying Lead Seal
Get "True-to-Name" Fruit
Write for Your Copy of This Catalog at Once

It tells how, in 1925, 85,000 Kellys' Trees were certified to be "True-to-Name" by the Massachusetts Fruit Growers' Association, whose Lead Seal stays on the tree until it fruits. Contains much valuable fruit-growing information.

46 years' experience is put into Kellys' Trees. You will get bigger and better crops from Kellys' Trees because their roots are heavy, healthy and fibrous being propagated on whole root, imported seedlings—not piece roots.

Plucking Live Geese

As I want to raise geese as a side line, would like to know if there is a law preventing a person from picking them. I want to paint my ceiling which has been whitewashed. How shall I get the whitewash off? I cannot scrape it off.—Mrs. T. McC., Bradford County, Pa.

I do not know of any law which prohibits the plucking of live geese altho the custom is not as prevalent as in the days when feather beds were more generally used. Most breeders in our section pluck only the geese that are killed for market but a few pluck the live geese just before molting time.

We have had fair luck in removing whitewash thru soaking the surface by rubbing it with a cloth wet with hot water. Then scrape the surface with a broad chisel or a putty knife.—R. G. Kirby.

Farm Flocks Greater

THE Department of Agriculture estimates that there was an increase of 4.7 per cent in the number of hens and pullets of laying age on farms January 1 this year over January 1, 1925, and that the production of chickens on farms last year was 4.2 per cent greater than in 1924.

The total value of the chickens produced on farms last year was about 12 per cent greater than in 1924 and the average chicken produced was worth 7 per cent more.

The largest increase in the production of chickens last year was 14 per cent in the East North Central States, followed by increases of 13 per cent in the North Atlantic division, 12 per cent in the Pacific Coast States and 7 per cent in the West North Central division. Decreases of 4 per cent are reported for the South Central States and 7 per cent in the South Atlantic.

Egg Production Increased

Total production of eggs in 1925 was slightly larger than in 1924, receipts at the five principal markets being about 15,500,000 cases or about 1 per cent more than in 1924. The farm price of eggs in 1925 averaged 30½ cents a dozen, compared with 26.4 cents in 1924, and 27 cents in 1923. The total value of the 1925 farm egg crop increased about 17 per cent over that of 1924.

Incomplete returns from large commercial poultry plants indicate increases during the past year greater than shown for farm flocks.

Burn All Cornstalks

NOT a single stalk of corn and other corn crop remnants should remain unburned after May 15 in Erie, Crawford, Mercer, Venango, Warren, Forest and McKean Counties. This is the statement of C. H. Hadley, director, Bureau of Plant Industry, Pennsylvania Department of Agriculture, who has initiated a vigorous "burn all cornstalks" campaign in these counties in an attempt to reduce the spread of the European corn borer next summer and save farmers from its destructive work.

The thoro clean-up of old cornfields is the most effective means available to farmers of northwestern Pennsylvania in their present fight to save their corn growing industry. Recognizing this, the State Department of Agriculture has issued a quarantine regulation which requires a thoro clean-up of all old corn fields in the infested area before May 15th. In order that every farmer may take the regulation seriously, a penalty is provided for those who do not comply with its provisions. Splendid cooperation from all corn growers is already reported.

LAWRENCE P. UHL

THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO.

I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct, from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:

For quick action, you can order, from this advertisement in perfect safety. Reference: Farmers State Bank, Duns or Bradstreet. Or get our free Catalog and further details as to prices on Chicks. Write your exact wants at once if you cannot make up your order from this price list. I want your business this season and you may rest assured that we will take care of you RIGHT.

LIVESTOCK

Review of local market for week ending March 20, 1926: Market extremely dull on all classes of killing stock except common and medium grade cows. Practically no trading in beef steers. Compared with week ago: Beef steers weak, bidding sharply lower, several loads held over for Monday's market. Bulls and heifers holding about steady. Cows steady to firm, good demand for cutters and common to medium bolognas; bulk, $4.25@5.50. Calves holding about steady under light demand; top vealers, $15.50. Hogs steady to weak; top westerns, $14.75; bulk, $14.25@14.50.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)......	$ .42	$ .43¾	$ .43	$ .47⅝
Eggs, fresh gathered extra firsts (N. Y.)......	.31½	.29½	.31¾	.32¾
Chickens, live, by express (New York)......	.37	.37	.37	.40
Potatoes, 150-lb sacks (Philadelphia)......	6.75	6.75	6.82	1.15
Steers, good to choice (Lancaster)......	9.50	9.62½	...	9.75
Hay, Number 2 timothy, baled (Phila.)......	24.50	24.50	24.50	18.50
Wheat, No. 2 red winter (Philadelphia)......	1.68	1.74	1.78½	1.78
Corn, No. 2 yellow (Philadelphia)......	.77	.78	.77½	1.35
Oats, Number 2 white (Philadelphia)......	.49¾	.51	.51	.57

Receipts for Saturday's market: Cattle, 5 cars from Penna containing 113 head; 346 head trucked in from nearby farms. Total, cattle, 459 head, 6 calves. Receipts for week ending March 20, 1926: Cattle, 26 cars; 24 from Penna, 2 Maryland; containing 650 head; 935 head trucked in Total cattle, 1585 head, 61 calves, 608 hogs. Comparisons with previous week: Cattle, 41 cars containing 1097 head, 1011 head trucked in. Total cattle, 2108 head, 32 calves, 933 hogs.

Steers:—

Hard winter wheat bran.....	33.50
Standard middlings	32.00@32.50
Soft winter wheat middlings.	32.70@37.50
Flour middlings	34.50@38.00
Red dog flour	38.50@39.50
White hominy	31.20@31.50
Yellow hominy	31.00
Gluten feed	37.85
36 per cent cottonseed meal..	37.50
41 per cent cottonseed meal..	39.50@39.75
43 per cent cottonseed meal..	41.50
34 per cent linseed meal	49.50@50.70

Millfeed in good demand with production restricted.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE advance in spinach prices is one feature of the Philadelphia market during the week ending March 19th, according to the Pennsylvania and Federal Bureau of Markets. Supplies were mostly from Texas and the quality and condition was irregular. Some stock from South Carolina and Virginia has been received but receipts of this stock have been too light to have much effect on the market.

The season has been delayed by cold weather in the Norfolk section, which is normally shipping at this time. The market on the nineteenth was somewhat weaker due partly to the inferior quality of the stock offered.

Potatoes showed a weaker tendency during the latter part of the week due largely to the heavier receipts. The movement was slow and altho the price range showed little change during the week, more sales were being made at the lower figure.

The onion market was considerably stronger despite the ordinary quality of the offerings. At the close dealers were asking decidedly higher prices for fancy stock. Supplies of mushrooms were fairly liberal at the close and the market weaker. Turnip tops have been meeting an active demand at good prices but weakened a little today.—W. R. W.

Butter Markets

THE condition of the butter market during the week ending March 20 showed but little change from the several weeks preceding. The markets continued their erratic trend with prices gradually working to lower levels. Confidence at the present price levels appeared to be almost entirely lacking and speculative buying of actual butter was conspicuous by its absence.

During the latter part of the week supplies of the better grades of butter on practically all markets were in excess of the consuming demand and with stocks accumulating dealers continued a free selling policy, resulting in some rather sharp declines towards the close.

With buyers taking butter only for their most urgent requirement there was practically no incentive for receivers to carry current arrivals over as the posibility of a further decline on the following day appeared more probable than an advance. The entire situation lacked stability with no definite trend in evidence altho sentiment at the moment appeared bearish in most quarters.

The World's Finest Fruit and Ornamental Trees, Vines and Plants

for Spring planting. Grown expressly to meet the requirements of the large Fruit grower and Home Maker. Unequaled in price and quality, warranted true-to-name. Our 40 years experience in the Orchard and Nursery enables us to know and produce the kind of trees required by the planters to insure their success. Write today for our large 56-page illustrated descriptive catalog, it will save you disappointment and money.

County News and Comment

Adams County, Pa.—Weather has been unusually cold for past month. Not much work done. Fruit men busy pruning. Grain fields bare. Spring sales are in full swing. Good stuff selling well, particularly pigs and shoats. Suckling pigs $8@10 each; corn low as 60c. Wheat has been pretty nearly all sold at about $1.80. Cattle wintering well with plenty of feed. Yearly help more plentiful than for several years. Wages $50 a month, house rent, pork, wood, etc. Prices: wheat, $1.62; corn, 65c; oats, 50c; butter, 45c; eggs, 23c.—A. R., March 16.

Allegheny County, Pa.—No spring weather yet. Wheat looks promising. New meadows fair. Some complaints about the set of clover. Some outside work being done by farmers. Interest being taken in fruit trees and baby chicks now. B. and O. R. R. plans to run what is known as a "bull train" in May and our county will have the benefit of two stops. The dairy breeds will be represented by speakers and by bulls of the different breeds. This will, no doubt, be of real benefit to the dairy farmer and should have our hearty support.—C. K., March 11.

Centre County, Pa.—Much cold, stormy weather in February. Ice eleven and a half inches deep formed and some farmers who had allowed the first ice to go without filling their ice houses took advantage of this freeze. Very few signs of spring. Public sales have begun. One county paper has fifty-three published. Little pigs very scarce and high. Veal calves, 12c live weight; beef, 14c, all around; wheat, $1.60; rye, 90c; corn, 70c; barley, 80c; buckwheat, 80c; oats, 35c; butter, 45c; eggs, 35c; lard, 18c.—A., March 10.

Lebanon County, Pa.—Still having real winter weather. Wheat badly frozen and poor but there is little heaving showing in grass fields. Corn stubbles have been dragged and manure being pulled. Much firewood being prepared altho hard coal has appeared at dealers' yards. Many farmers have shipped their tobacco. Price about 9c on average. There is noticeable back-to-the-farm movement. All farm stock sales very good. A $75 check—first prize—was received by our Potato Growers' Association. Other State Show money prizes runs total up to $153. Forty-two ribbons were won. Lebanon ranks first in production and handling of milk, in its water system, its sewage disposal and in its treatment of diphtheria among the cities of Pennsylvania. One hundred and ninety-nine dealers supply Lebanon with milk. All grade A dairies have received cards from this city which entitles employes to a free examination for communicable diseases, etc. Dairies themselves are examined semi-monthly. The poultry show people have met and rented Malta Hall for next December's show. Judge Greiner will attend again to granting the awards. Eggs 24c. Other produce about the same except wheat, which brings a small premium, about Philadelphia prices, at local mills.—R. I. W., March 15.

Mifflin County, Pa.—Weather still cold with a few warm days. Wood and coal have become an interesting item as no coal has arrived yet and wood is scarce and high in price. Farmers hauling manure and lime. Some work being done on public roads. Public sales being held. Some articles sell very low, stock and some other things at fair prices. Hogs scarce and selling high. Market prices: wheat, $1.53; corn, 75c; oats, 40c; potatoes, $2; butter, 50c; eggs, 28c; lard, 18c; chickens, 28c; apples, $1.—J. H. B., March 15.

Somerset County, Pa.—Are having rough blustry weather with thermometer staying close to zero. At annual meetings of the Chamber of Commerce of Somerset the disease-free potato club was adopted unanimously. One of the principal objects of this club is to acquaint potato growers with efficient and economic methods of growing potatoes free of disease. Senator G. W. Pepper, on his tour of Somerset County, stopped at several places and made speeches. His main theme was: "It is high time that we should give to our domestic problems some of the time and attention we like to lavish on the problems of Europe." An increase of 889,137 net tons in coal production of the twentieth bituminous district for 1925 over the preceding year is shown in the annual report issued by mine inspector F. W. Cunningham, of Somerset. There were eight less fatal accidents than in 1924. The total coal production last year was 4,505,818 tons. Prices of farm produce about the same for last few weeks.—H. W. B., March 13.

Susquehanna County, Pa.—Some of our roads are still blocked with deep drifts. Farmers are unable to get their orchard pruning done on account of deep snow. Egg production is very low, in some flocks less than twenty-five per cent. We have an epidemic of typhoid fever in New Milford and scarlet fever in Montrose. Doctors order all water boiled to kill any germs. Now the coal strike is settled farmers have a chance to get a supply of wood for home use. Many felt sorry for their town friends and helped them out by furnishing wood until they were able to get coal. Not as many sales this spring as usual. Hay not holding out well. Many farmers will be obliged to buy hay for their cattle. Hogs and little pigs are scarce and high. Many are planning to raise calves to replace cows taken by the T. B. test. Eggs, 30c; dressed pork, 20c; butter, 50c; potatoes, $3.—J. A. G., March 15.

Tobacco Letter

TOBACCO buying has practically stopped in this section. A little flurry of buying within the past few weeks caused slightly higher prices but moved very little tobacco from the growers' hands. Recent sales have been made at thirteen and three, altho the bulk of the tobacco bought thus far has brought only about ten cents per pound on an average.

It is estimated that at least fifty per cent of the 1925 crop has not yet found a buyer. Recent proposals to form an Agricultural Credit Association in Lancaster County to finance the unsold portion of the crop thru government bonded warehouses, will hardly be accepted by many growers, in the opinion of those well informed on the situation. It is likely that much of the tobacco now held by farmers will be packed by independent handlers, the grower paying a fixed sum for packing and storage and selling any time he wishes.

Growers who have last year's crop still in the shed are in a quandary as to how much tobacco to plant. The Pennsylvania tobacco producing belt has not faced conditions so chaotic as they are at present for a good many years.—Lancaster, Pa., March 18.

Alfalfa Routs Thistle

WHAT shall I do to eradicate this awful Canada thistle? I have tried almost everything. A few years ago I thought I had a remedy; I bought a strong chemical especially made for such weeds. It was sprayed on weeds and it killed them right away but, alas, soon they showed again. We have cultivated and hoed them off often during the summer but still we have them.

I had a neighbor who had them and he sowed alfalfa and made hay three years and he has very few thistles now. It seems to me where alfalfa will grow that this is by far the best plan to eradicate the pest and at the same time make a profit from the land without spending any labor to get rid of the thistles. But in soil where no alfalfa grows, what about orchard grass or something of the kind which requires frequent mowing? Fighting the pest in open ground is hopeless.—C. R. Bashore, Berks County, Pa.

Can You Help the Sesqui-Centennial?

SECRETARY of Agriculture, F. P. Willits, Department of Agriculture, Harrisburg, is interested in hearing from farmers and others in Pennsylvania who have in their possession farm implements, farm household equipment and other things which have been used in farming within the past 150 years.

Those writing should give him a brief description of the article and tell whether it would be available for use at the Sesqui-Centennial in Philadelphia and for other historical purposes. Do not send anything into the Department except by request.

Any information as to material or references, bearing on the history of the development of agriculture in Pennsylvania will be appreciated.

E-B Osborne Grain Binder

Special features enable you to get all the grain—even down and tangled—because cutter bar can be run very close to ground. Guards are mounted on a special Z-bar which forms edge of platform. Reel is easily adjusted by one lever from 4 to 34 inches above guards. There is also ample adjustment of reel forward and back.

Power for the binding head is taken from front end of pitman shaft with a short chain—giving a divided drive with power distributed evenly, making a balanced machine.

And for perfect binding the E-B Osborne is famous. The knotter head is so efficient that only small refinements have been made in over 30 years.

Built in 6, 7 and 8 ft. sizes, and furnished with special hitch for tractor use.

E-B Osborne Corn Binder made in two sizes—one regular, the other for kaffir and other short row crops. Perfectly balanced without side draft or neck weight. Very strong but light weight and with wide binding range.

Women Have the First Word

(Continued from page 3)

Last, but not least, when he goes to bed at night I wish to heavens he would not take his half of the bed in the middle.

Yours for better husbands.—Mrs. Farmer.

Wife, Servant and Hired Man

I WISH my husband would see into things and do as I do,—live up to the times and be more considerate of the welfare of his family. He does not realize that a soul needs recreation to preserve the home ties.

We live on a 115-acre farm and have three kiddies. I do all my own housework, baking, cooking, cleaning, sewing for my kiddies and myself. I try to save wherever I can. I make smaller garments out of some discarded thing which is worn at some place or outgrown. When I try to show him what I have done he doesn't realize what I have saved him.

Besides doing all the above mentioned I do my share in the fields, drive the tractor and plow, etc. We have no hired man. So you can see I'm wife, in the first place; servant in the next, and hired man in the third.

But When He Wants to Go

Whenever I say to him after a hard day of work, let's go here or there for some new ideas or a chat with somebody else, he says, "Oh, yes! If you can only be on the street all the time." But when he has business in town he just hops in his car and away he goes. He never invites me to come along or asks if he can bring something for me.

He pouts at me in anger when I ask him for money for provisions. He doesn't know, as I often tell him, that he is one who needs it as badly as the rest. It surely would be a blessing to me could I make him realize life and its good qualities. I simply cannot forget that you must have recreation, friendship and love to rear your children so they will become good citizens in the days to come.—Flor-En-Tina.

P. F. for Bible Class

YOU want me to tell you something I wish my husband would not do, so I shall begin.

First: It does exasperate me when he gets Pennsylvania Farmer as soon as he eats his breakfast on Sunday morning, and stretches himself out on the couch instead of going to church.

Now, I think Pennsylvania Farmer the best little paper published, and I always read it the same day it arrives and would be ready to go to church Sunday if I had some way of getting there besides walking.

Now, Mr. Editor, please write to my husband and request him to teach me how to run our car. Then I will put cushions on the back seat and fix it up real comfortable and he can take his highly prized paper and recline on the back seat. Then when we get to church he can read "Neshaminy Gardens" to the members of the Bible class, and I think he will feel a lot better, and perhaps will swell the subscription list.

Then I do wish he would not think that little calves know everything as soon as they are born and can eat and go just where he wants them to go right off the reel.—Mrs. D. A. P.

An Ideal Husband

WE HAVE long been readers of Pennsylvania Farmer and when my husband finds anything in it that he thinks might interest me he reads it aloud. Last night when he came to the contest about "Things I Wish My Husband Wouldn't Do," he read it to me and said he wished I would answer it for he would like to know what he does that I do not like. I thought a while, then made up my mind I must have an ideal husband, for I could not think of anything; but later I thought of something.

I wish he would not look at going to church as a thing that doesn't have to be done, and as a dread rather than a pleasure. I have two boys, eight and ten, and I think you will agree with me that they should go to church at least part of the time.

Before I was married I went to church every Sunday I could, but we have been married fourteen years and I think I would be safe in saying we have not been to church over a dozen times.

He Gives to the Church

He gives money to the church whenever they want it; he says he would not want to live in a neighborhood where there was no church, for some people need church to keep them straight, but he can be straight without church, and he is.

But on account of my boys, this summer I am going to try a new plan. It has always been my disposition to go two-thirds of the way toward getting along and it has worked out fine, so I am going to ask him to go one Sunday out of three.

No doubt there are some women who could write a book on the things they wish their husbands wouldn't do. I can think of only one, but he wanted to see what I would write and here it is.—Mother.

He Has "Important Business"

I AM sorry to tell you my husband does a number of things that I wish he wouldn't do. He always refers to me as "she." When I ask him to go to church he will say, "I'm not going along today." I'm to have only one new every-day dress in a year.

When visiting he always keeps his hat on in the house, and hangs his head while conversing with people. Our bank account is always referred to as "mine."

He is very untidy, has his hair cut every three or four months, lets so much dirt gather in his ears, and takes a bath every twenty weeks. He chews tobacco before he's out of bed in the morning, and uses a corner for a cuspidor.

An hour or two after I call him for dinner he finally condescends to eat. Praises other women's cooking and habits, when I know all their tame pets have apartments rented in the kitchen, even the garbage pail. He doesn't appreciate my cleanliness and good meals.

Where Does He Go?

Sometimes "important business" must be attended to and I can't go along. He usually gets home early next morning, and when in bed for about an hour starts singing, "Show Me the Way to Go Home," etc. Where has he been?

Next day one of those good neighbor women will say, "Did you hear about the dance last night? Suppose you know all about it. Heard your husband was there having a high old time with the lady folks."

He hasn't graduated in table manners, nor does he ever bring me home a box of chocolates which I'd enjoy better than growling or swearing.—Good Natured Wife.

"When the eyes are shut, the hearing becomes more acute," says a medical authority. We have noticed people trying this experiment in church.

HELP WANTED

$60 PER WEEK AND EXPENSES—Sell balanced rations for dairy cows to feeders and dealers in your home district. Must own car. Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS SWOLLEN JOINTS.—Have a valuable cow, also a heavy milker, milks sixty pounds and over, was fresh in November. The last three weeks her hind legs at the joints are swollen, otherwise she is all right. Kindly let me know what I can do for this. We feed alfalfa hay, grain ration, corn oats, bran, oil meal and cottonseed.—G. H., Washington, N. J. This cow should be allowed regular exercise and when stabled have plenty of bedding. Bathing with warm water may help reduce the swellings. It is not uncommon for abscesses to develop and these must be drained before improvement can be noted. For such a valuable cow, you would do well to have your local veterinarian make an examination and advise as to her care.

HYSTERIA OR FRIGHT DISEASE.—Our dogs have something like running fits. They get scared and bark and run into everything, lay down, roll around and they get pains. We lost quite a few dogs last year and some of them have it yet. We tried everything for the dogs and cannot get rid of it. Could you tell us anything to do?—J. D., Downer, N. J. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates, such as potatoes, white bread or macaroni; overloaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. The condition is probably due to the pastry which should be omitted and raw or cooked meat be fed. Dogs need meat as that forms an essential part of the diet if dog is allowed choice of feed. Your veterinarian should be consulted as foreign bodies may be the cause.

COW NOT DOING WELL.—Two weeks ago I had a cow freshen. I had to remove afterbirth and cow has had some discharge ever since. At time she freshened seemed to be in good condition, but is weak and chilly now and gives only about half as much milk as at first. Am feeding grain feed of ground corn, oats, linseed meal and bran, also clover hay and corn fodder as roughage. Have been flushing with salt water one tablespoon to one quart once a day. What would you advise for her? How could I get more mineral in her feed?—H. S., Reynoldsville, Pa. It may be that the dicharge is coming from the uterus, in which event the uterus should be douched. It is best to have your veterinarian do such work. The diet looks like a good one. Allow free access to a box containing one part salt and four parts bone meal. Some of this mixture may be added to the grain feed.

SORE SHOULDERS.—I have a mare that is nine years old and is in good health. About two years ago there appeared a lump about the size of a pea at the point of the shoulder. When worked this became sore. A year later another one grew and united with the first and now is the size of a hazel nut. During the winter this heals over. At the other shoulder the same is coming. The collar fits. Please advise me what to do.—T. L., Prospect, Pa. It will probably be necessary to have these growths removed. Your veterinarian could take care of this proposition altho operative procedures are best undertaken after the fall work is done. This allows a complete healing before the animal is worked. Sometimes a part of the pad is removed to prevent pressure on the part.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

CHICKS—Pure bred White and Black Leghorns 9c up. Free circular. Geo. Walters, Seven Valleys, Pa.

Wonderful *New* Method

Milks Cows Like No Other Machine Ever Milked Cows Before

AT LAST something *new* has happened in the history of machine milking!

For 15 years milking machine makers have been bringing out new models—telling of the grand improvements they have made—BUT when all was said and done, it proved to be mostly talk, which didn't mean a thing to the farmer.

Now—the Pine Tree Milking Machine Company has brought out something *really* new.

The wonderful SURGE Milker has changed all old ideas of what a milking machine ought to accomplish. You cannot judge this machine by anything you ever knew of milking machines in the past. Breeders who used to be afraid to put a machine on their record making pure breds are using the SURGE. They tell us they are making wonderful records—and the udders have never been kept in better condition by the most careful hand milking.

Dairymen producing for city milk trade who couldn't make pure, clean milk with old type machines are earning premiums for low bacteria count—and spend no more time washing the SURGE than they used to spend washing milk pails.

The SURGE is sweeping everything before it. It is the greatest thing that has happened in the dairy industry for many years.

Send the coupon below for details of our surprising offer that gives you a chance to prove out these things for yourself before you obligate yourself to buy a thing.

Only 4 of These Rubbers To Wash

Think of that! You men who have tried so hard to keep old "Long Tube" milkers clean—and couldn't get by with it. Only these four simple pieces of rubber to wash. No long tubes. No claws. No places for milk to lodge and breed bacteria. Milk travels only 4 inches from teat to pail.

Another thing! You take the machine all apart for washing in 20 seconds. No tools needed. And you put it all together ready for use in half a minute. If you have ever handled a milking machine, you know what this means. The one old objection to milking machines is wiped off the slate. Any man can make a grade of milk equal to Certified standards with the Surge.

Actual Size Surge Inflation Protected by U. S. Letters Patent No. 1,397,840

Mail Coupon for FREE Demonstration OFFER!

Why Do We Call It the "SURGE"?

You will know at once when you see it work. That surging action—back and forth, gets the milk as no milker ever got it before. Cows that would never give down their milk to a machine, milk out DRY with this wonder milker. It sucks from the front, just like a calf. It gets the strippings as no machine ever got them. For two years it has been milking a herd of freak cows that we got together to put this machine to the most difficult test that any milker ever had to meet.

Pine Tree Milking Machine Co. Dept. 31-23
Bourse Bldg., Philadelphia, Pa.
Please send me, without cost or obligation, your special offer on the Pine Tree Surge Milker.

I milk........cows.

What power will you use? ☐ Gas ☐ Electricity

Name...

Address..........................*R. F. D.*..............

You've been reading here the most surprising statements you have ever read about a milking machine. But you will never believe them as we believe them until you see this wonder milker working in your own barn, on your own cows. That's why we are ready to offer you a chance to have a FREE demonstration without obligating yourself to buy anything. We want you to see the Surge Milker milk out a cow that you are ready to bet can't be milked by machine. We want you to take the machine apart and wash it, *yourself*. Just to see how quick and easy it's done.

Once you see these things for yourself, we don't have to spend any time trying to "Sell" you an outfit. You'll never let us take it out of your barn. But we're taking the chance of that—not you. Our FREE demonstration offer leaves you open to do exactly what you want to do. It is the most surprising offer ever made in milking machine history. Send today for full details.

Easy Terms

Any man who wants to buy a Pine Tree Surge Outfit after our free demonstration, can make a deal to pay for it on very easy terms. We'll figure with you to keep the cost down by using any equipment you may have already installed in your barn. You'll be surprised how little it will amount to. Fill in the coupon and mail it right now. It doesn't obligate you to do a thing but listen to the proposition we have ready to make you. Mail the coupon at once.

Home Tests for Seed Corn

Know What the Germination Is and Prevent Loss

OLD fashioned doctors used to diagnose tuberculosis by looking at a patient. Old fashioned farmers tell whether seed is good or not by the same method. But in farming, as in medicine, it is now well understood that opinions formed in that old fashioned way are worthless, because they have been proved to be subject to an enormous percentage of error.

Where life is at stake, there is no room for errors, and nowadays a suspected tuberculosis case is given a laboratory test. Is there any excuse for sowing seed, which has not had a test just as reliable? Good seed does not guarantee a good crop, for many things may happen to destroy the seedlings; but poor seed makes it impossible for a full yield to be enjoyed, because no matter how favorable the weather or how good the culture, there will be vacant spaces in the rows caused by the failure of seed to germinate.

The rag doll.

The Work Done in Laboratories

Among reputable seedsmen in this country seeds are dealt in only on the basis of germination tests. Such a test is made by the seller and checked by the buyer, when seeds move in wholesale lots. These tests are made in laboratories, by experts; and every user of such seeds can obtain with them a statement of their germination. A farmer who sows seeds of unknown germination is gambling not only with the money he pays for his seed, but with his land and his labor. He is taking a chance which no one can afford to take.

Seeds which are saved by the farmer for his own use, or traded between neighbors, seldom if ever receive a laboratory test for germination. It is possible always to send samples to one's state analyst and get a test; but this takes time and trouble, so that a large proportion of the seed sown by farmers even now is sown without any definite knowledge of its germination qualities, with a consequent loss in yield which must amount to a large figure.

How to read a seed corn test: 1. Three dead and three weak kernels of corn. 2. Six strong kernels. 3. Six weak kernels.

The Simpler Methods

While no home test can be compared in accuracy and reliability with the work of a competent analyst in a well equipped laboratory, there are simple methods of testing germination which are available to farmers, and which should be used by all means if no better test can be had.

These methods may be used for any agricultural seeds. But for convenience, I shall discuss their application to testing seed corn.

First the "rag doll" method. A width of sheeting from three to five feet long, depending upon the number of samples of seed to be tested, and from eight to ten inches wide, is the foundation. The strip is marked lengthwise down the center with a heavy pencil and then crosswise from three to five inches apart, according to the samples desired to be tested.

Making the "Rag Doll"

The cloth is wet with warm water and laid out on a board or table in front of the ears to be tested, the ears being laid to correspond with the squares. Remove six to twelve kernels from ear No. 1, and place them in square No. 1. Follow the same method with ears Nos. 2, 3, 4, etc., until the squares are filled.

When the spaces are filled, begin at No. 1, or upper end, and roll up, using a small piece of wood or other substance to roll it over at the start, as this core will give more uniform moisture and germination. If the cloth is properly moistened, the kernels will not slip out. Tie the roll about the middle, or use rubber bands. Place the rolls in a bucket of water where they may remain from two to eighteen hours at convenience. Turn off the water and turn the bucket or box over the rolls, placing a small stick or block under one edge for ventilation. In five days the kernels will be ready for examination and the percentage of germination will be plainly shown by the sprouts.

The sawdust box germination test employs any box three or four inches deep and about thirty by thirty inches, or any convenient size, according to the quantity of seed to be tested. The box is filled half full of white pine sawdust pressed down to a firm even surface, having been previously moistened. The simplest way to do this is to place the sawdust in a sack and weight it down in a tub of warm water for at least an hour, or better still, over night.

The sawdust box.

Select Kernels to Be Used

Rule off a piece of cloth about the size of the box, two and one-half inches each way, and number the squares to correspond with the ears to be tested, selecting seed from the butt, center and tip of the ear on opposite sides of the cob. The square cloth is laid upon the moist sawdust in the box and the edges tacked to the side of the box before the corn is put in place.

Another cloth is then laid over it, moistened by sprinkling, and upon this two inches of moist sawdust is filled in, pressing it down firmly. Keep the box in a warm place and safe from any chance of freezing. The kernels will germinate in about six days and the upper cloth and sawdust may be removed carefully and the samples in the squares examined.

Planting Time in the Farm Woodlot

When Handling Young Seedlings the Easy Way Usually Is the Most Expensive

By C. R. ANDERSON
The Pennsylvania State College

TOO many mistakes are being made in planting forest trees. The result is certain to be disappointing to a number of men who have worked hard to get their trees in the ground, but who have not done the work right. The farmer can hardly be expected to let his teams stand idle during good weather while he plants trees, so a knowledge of how to carry his trees successfully until he can handle them is essential.

Here are some of the mistakes that we have found in traveling over the state. One is failure to "heel" trees in the ground when they arrive and until they can be planted. In one instance the trees were received early in April and a month later they were still "heeled" in, the original bunches uncut. Those on the inside of the bunches, particularly the larger trees, were as dry as they could be. A few of them were already dead. It is a question just how many of the rest will live, no matter how carefully they are planted.

The bunches in this case should have been cut at once when received, each bunch spread over a space of eight to ten inches in the row, good earth placed firmly about the roots, and the latter well watered.

"Puddle" Trees Before Planting

Then we found men who were not "puddling" their trees at all before planting them. In some cases the roots were rather dry or the ground was dry, in others the day was a drying day, and yet the trees were being put in without this necessary precaution. Later in the season John Smith may wonder why his trees didn't grow as well as those of William Jones when he planted them in exactly the same manner. The answer may lie in his failure to "puddle." The roots should be given a good sousing in water which has had some dirt stirred into it to make a thin paste. "Puddling" is root insurance.

In some cases the sod is not cleared away correctly from the spot where the tree is to go. We have seen plantations succeed where the sod was not cut at all, and in which the tree was planted by slipping it into a cut made in the sod, but success with the use of such a method is the exception, not the rule. Even when the survival is good, the trees lack vigor of growth for the first several years. The sod, if there is any, must be cut away from a spot not less than eight to ten inches across, and the hole for the tree then dug in the cleared spot. It is false economy to think we can "get by" without doing a good job of sod-cutting.

We are often asked whether the plow can be used to advantage. It may be used to cut the sod and save the time of the men handling the mattocks but the tendency is to run the plow too deep. It must be set so that the sod is just turned over—most farmers would not call it plowing at all. The furrow is run where the row is to go. The holes are then dug in the bottom of the furrow. Furrows should not run up and down hill; they should follow the contour of the hill. Furrowing greatly increases the number of trees planted per man per day.

Doing a good job of planting. The farmer removes the sod with a mattock before he digs the hole. The son packs the dirt around the tree.

A common mistake lies in not getting the tree firmly enough in the ground. This is a very, very common difficulty, and an examination of any newly made plantation often shows some trees which were not set solidly enough. As a consequence the roots dry out before the rootlets can attach themselves to the soil, and the tree is gone. It is almost impossible to put the trees in the ground too firmly. The foot can be used to press the dirt in the hole around the roots but some planters use a wooden mallet to tamp the soil, and we have seen others use a rounded stone. The hand, the foot, a wooden mallet, a stone, may all be used at times, and interchangeably. The all-important thing is to have the tree tight in the ground.

Some planters are not sufficiently careful to drop all poor trees out of the bundle. There is no use in planting a weak specimen

And Now It Is the Men's Turn

Husbands Write about the Things They Wish Their Wives Wouldn't Do

And Yet She Isn't Happy

Awarded Prize of Five Dollars

I WOULD like to change the heading you give to read: "What I Wish My Wife Had Not Done." For after forty years it does not so much matter about either the present or the future as it does about the past.

First, then, I wish she had never compared her husband to more successful men.

Second, I wish she had never criticized me in the presence of the children and especially when I was not present.

Third, she should never have found fault with me to outsiders.

Fourth, I wish she had let a few of my pet delusions alone, for instance, I do not know what good ever came of her pointing out to me the weaknesses in my father's character altho I can see she was right. I would never have thought of them otherwise. Then, I would never have dreamed that I thought more of my stock than of my family if she had not told me, nor would I have thought that my love for her was all passion without being told.

Then I wish she had not opened every door she ever found shut and shut every one she found open. Nor moved so much. We have a ten-room house and every room in it has been at one time or another my bedroom and on occasions I have slept in the hall. Also, every room downstairs has been the dining-room in its turn.

We have less debt on 130 acres today than we had on forty acres forty years ago. Our children, of which there are six, have all more education than we ever received. The older ones each have a diploma or two and some of them have done some work in the university and they are all doing well. Of the younger, two are still in school; one in college, the other in high school.

We have a piano, a phonograph and a radio and our living room table always carries a few magazines. We have books and papers. We have paid several thousand to the support of the church and more thousands in taxes to the support of the state, but I will sign myself as I do because the thing I wanted more than anything else, namely her happiness, I have never been permitted to see.

I try to persuade myself it is not my fault and that I do not care but I am not sure of the former and know the latter is not true.—A Failure.

He Would Buy Her Labor Savers

I WISH my wife wouldn't object to having help in the kitchen during the busy season. She is the type of woman who thinks nobody can do things as she would like to have them done. She is probably right, but I do not like to see her work so hard.

I wish my wife wouldn't deprive herself of a few necessary labor-saving devices such as a separator, washing machine, vacuum cleaner, etc. I could and would get such things for her willingly but whenever I mention it to her she says, "no, not yet, we must save for the rainy day." I am afraid this rainy day is not far off if she continues to be a slave to her duties. This is the time when the man of the house should use his own judgment and I intend to.

I wish my wife wouldn't forget to close the chicken yard gate after her. What a lot of destruction a flock of chickens can do to young crops.

I wish my wife wouldn't go to the chicken house to take care of her setting hens without throwing an extra cloak around her in bad weather. That is a very easy way to catch cold.

I wish my wife wouldn't neglect to wear her false teeth while busy with her duties. Even false teeth add greatly to her appearance.

I wish my wife wouldn't try to cover up her gray hairs, for, as the old saying goes, gray hairs are honorable.

And in conclusion, I wish my wife wouldn't object to me chewing tobacco. I want to please her and yet I feel lost without it.—W. R. W.

Says She Never Makes Mistakes

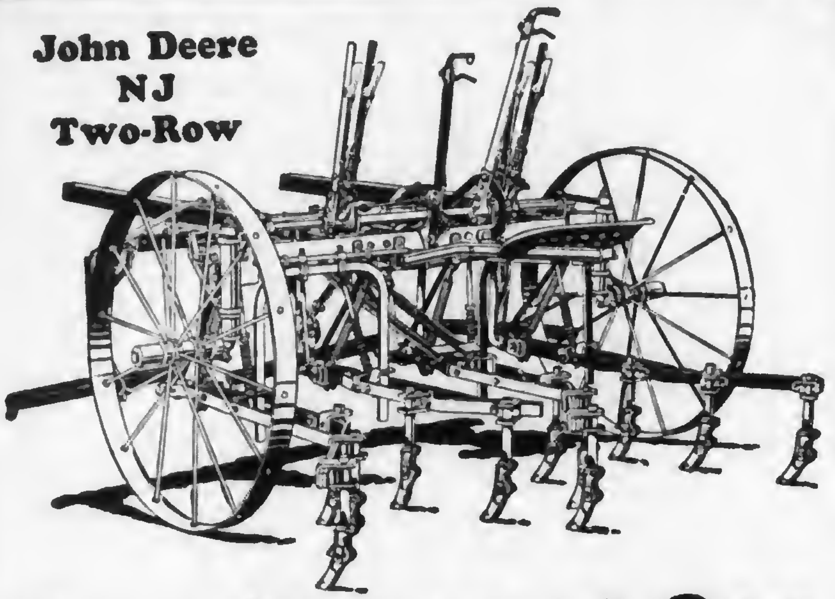
IT IS not pleasant to have no place in the home I can call my own. It is grievous not to be able to place my hand on a paper or letter which I have laid aside for future use.

When I speak to my boys by way of correction or to give directions, it is disconcerting to have my wife say the boy is all

(to page 30)

There never has been a John Deere implement discarded because the user couldn't get repairs.

John Deere NJ Two-Row



Save Wages of One Man, One Horse

One man, with three horses and the John Deere NJ Two-Row, does as much work in a day as two men, with four horses and two single-row cultivators. That means a saving of approximately $4.50 a day.

Built Especially for All Narrow-Row Crops

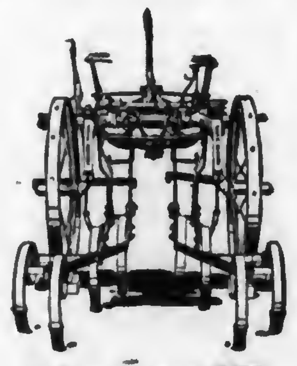
This two-row cultivator can be used in rows from 28 to 40 inches wide—just what you need to reduce your costs in cultivating potatoes, beans, tobacco, cabbage, etc.

Cultivates rows planted with either single-row or two-row planter. Spacing lever in front of seat enables you to space gangs instantly to conform to rows as they vary in width.

Master lever raises or lowers all rigs at same time—no stops at ends of rows.

Easy guide through pedal control. Rigs always work parallel—shovels always point straight ahead and cut out full width of gangs. Tractor hitch can be furnished.

WRITE TODAY for free folder describing the type of cultivator in which you are interested. Address John Deere, Moline, Illinois. Ask for Folder OE-436



John Deere KH Cultivator

The popular single-row cultivator for narrow-row or wide-row crops. Quickly adjustable to rows from 28 inches narrow to 48 inches wide.

Quick, easy lever control to meet all requirements of thorough work. Quick and wide dodge in crooked rows. You will like its strength—frame will not sag, wheels will not spread.

JOHN DEERE MOLINE ILL

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

OLD MAN WINTER, like most office holders, held full sway until his term was over and even then was reluctant to go when spring officially entered. While he didn't treat us severely in this section he kept steadily on the job until the twenty-first of March. Last year a few people had made some gardens before the twentieth, but this year frost still bound the earth below the surface on that date. However, an early spring does not always mean a favorable season for vegetation. In fact, the weatherman says this is a "normal" season.

* * *

I CANNOT find a single live plant of the crimson clover sown as a cover crop last fall. The past winter was very unfavorable for this clover, there being no continuous covering of snow to protect it during the hard, freezing weather. Other cover crops such as rye, and rye and vetch, are not what they should be because of the unfavorable weather for starting them last fall. There is no more important problem before truckers and other small land owners than that of providing sure and good cover crops. The growing scarcity and high price of manure make this a matter of supreme importance.

* * *

THE pruning of young trees is a work which many find difficult, so they do not do it. There has been so much discussion about severe cutting back on the one hand and minimum pruning on the other that the novice feels at sea over the question. A few years ago the extremists recommended pruning apple trees much the same as peach trees, that is, cutting back last year's growth one-third to one-half. Then a reaction set in and many growers recommended letting the tops of young apple trees grow at will during the first four or five years. Of the two extremes I would prefer the latter. However, a medium course is better than either. Let alone, a young tree is inclined to grow too many branches, thus using material which would better go into growing the permanent top. Besides, cutting out a large number of excess branches at one time later is a rather severe operation and retards bearing.

ON THE other hand, the novice usually makes the mistake of not pruning his peach trees enough. A peach tree let grow at will will never produce fine, large peaches. Severe pruning with them is always in place. In addition to keeping down the number of main branches to three or four, the previous year's growth should be cut back at least one-third, and if it has been twenty-four to thirty inches or more cut it back one-half. This tends to make a good, stocky tree, and reduces the number of buds so that the peaches will be of good size. Another important difference in the management of peaches and apples is that apples may be grown in sod with good success (with proper mulching), but the growing of first class peaches requires that they be given clean cultivation every year.

* * *

ONE thing which is bothering us a good bit at Neshaminy Gardens this spring is the lack of a good farm hand as yet. Other years when we did less than we plan for this year we have been fortunate in getting all the help needed and as needed. Past experience causes us to have hopes, but we would like to see the hope realized very soon. Also, we find it necessary to purchase a horse, this in spite of the fact that we talked of running a horseless farm a year or two ago. So far, the inventors have fallen down on the job of supplying a perfect substitute for a horse on a fruit and truck farm.

* * *

IN LOOKING thru the columns of a paper in which are several advertisements of men wanting employment on farms, I find that nine out of ten want "positions." That is, they want to be manager, head men, overseers, superintendents, etc., but none want a "job" where good, honest intelligent work is required. Possibly this is because the latter kind do not need to advertise for a job, while the "manager" class is overstocked. But this seems to be in keeping with the spirit of the age. Young men are all too prone to seek a salaried position where little physical labor is required, and where somebody else's brains must devise ways and means to run the business and pay the salaries.

LEARN TREE SURGERY

Here Is Your Opportunity to Earn While You Learn

We are offering a preliminary course in Tree Surgery to young men of character between the ages of 18 and 30. If you are physically and morally fit, willing to learn, love nature, like to travel, and want to associate with other fine men Write today for particulars to

THE CHEERFUL PLOWMAN

Precept without Example

OLD Snookums sometimes disobeys and acts rebellious part, she has a little roguish streak within her precious heart; she now and then gets brusque and bold and does not do as she is told! Now Snookums has four little pups of tender age and rare that she attempts to discipline with most exacting care, she would not have them disobey a thing herself or I might say. In her dog language hour by hour she tells them what is what, she tells them what is right to do and what she feels is not, she wants them to grow up, I'd say, good model dogs in every way!

"When you are told to bring the cows," she says (she does, I know), "it's up to you to act at once, it's up to you to go; you must not loiter in the sun and wish that wretched job were done! When you are told to mind the sheep, then minus 'whens' and 'whys,' get on the job without delay with both your ears and eyes, don't linger in your kennel bed and wish those sheep were sold or dead! When you are told to stay at home and not to tag a team, when you are told to watch the milk or guard a can of cream, your duty then is very plain, don't give your boss or mother pain!"

Yes, Snookums does her very best to train her little pups, to do their duty as it comes with all its downs and ups,—but, there is this peculiar phase: old Snookums sometimes disobeys!—J. Edw. Tufft.

Prompt delivery and Serviceable Merchandise

"I wish to express my appreciation for the prompt service I always receive in delivery. This makes the fourth tire I have ordered from the Ward Co. and am greatly satisfied. I know by my own experience that the Riverside Tire can easily double its mileage guarantee and is serviceable on every kind of road.

"I always will say a good word for Montgomery Ward & Co."

David De Smith,
Newark, N. Y.

Saved Money at Ward's for 35 years

"I must write and tell you how pleased we are with your prompt shipments, good quality and low prices. We have been buying from Ward's for 35 years, and every time everything is just as represented. My married daughters are also customers of Ward's. Once a customer always a customer. With the quick service and savings from 10 to 40%, Ward's is the place to buy."

Mrs. Florence Wright,
Jetmore, Kansas

Satisfied Customer for 53 years

"I am seventy-eight years old and have sent our orders to Montgomery Ward & Co. since you started your Grange Store in Chicago, in 1873. For years you have saved me money and filled my orders perfectly. Thank you so much; I am sending you another order."

Mrs. Susie E. Homersby,
Box 4,
New Pine Creek, Oregon

Ward's Quality and Low Prices

"Just a few words in regard to the quality of your goods and your low prices. I order almost all of the things we use including household furnishings, groceries, hardware, clothing and notions, and send for all of it to you practically; am very much pleased with the goods and service."

J. D. Klaassen,
Route 3,
Colony, Okla.

The Word of Satisfied Customers is the Final Seal of Approval
1870
MONTGOMERY WARD & CO.
1926

You, too, Can Save on Everything You Buy

Each year Montgomery Ward & Co. saves Millions of Dollars for the American people!

This big saving is possible because you and our eight million other customers together give us a *buying power* so vast, so tremendous! —that we are always able to secure for you lower-than-market prices.

Consider stoves, for example. Our customers always bought a great many stoves from us. But in the last four years our low prices *have actually doubled the number of our customers!* So that today we are able to contract for *all* the stoves a factory can make. Your average saving on a Ward stove is now at least $15.

Automobile tires, furniture, shoes, everything for the Home, for the Farm, for the Family, is bought in the same large quantities at equally low prices, bringing you savings equally large.

$60,000,000 in Cash Secures Low Prices for You

Have you ever stopped to consider that your Ward Catalogue brings you all the saving, all the price advantage that $60,000,000 in cash can secure for you?

That buying by the car load, by the train load, buying in every important market in the world—and paying cash, must secure for you absolutely the lowest possible prices! That there is no possible way you can secure a bigger opportunity for saving than by using regularly your copy of Ward's Catalogue!

And low prices at Ward's are made without sacrificing quality. We never cut the quality of a tire, a shoe, or a rug, to make the price seem lower. Ward Quality always is maintained. Ward's 54 year old guarantee is back of every article we sell: "Your money back if you want it."

Use Your Catalogue Regularly

So use your Catalogue—regularly. Take advantage of this opportunity for true cooperative buying. Share the saving made possible by $60,000,000 in cash used to secure low prices for you. There is for you, too, a saving of $50 *if you use your Catalogue*—and send all your orders to Ward's.

Vol. 93, No. 14 Phila., Pa., April 3, 1926 Whole No. 1507

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Let us not concern ourselves about how other men will do their duties, but concern ourselves about how we shall do ours.—Lyman Abbott.

Our Annual Caution

EVERY spring we feel it necessary to caution against undue haste in starting the plow. Soil that is plowed when too wet is injured beyond recovery for that season. This is especially true of soil containing a good percentage of clay. Soil can perform its true function in the growing of plants only when it is divided into its fine particles. When it is plowed wet cakes or lumps are formed which cement in drying and remain solid thruout the summer. A hard lump of soil is of no more use to a plant's roots than a stone of equal size. Besides the inability of rootlets to penetrate a hard clod, big air spaces are formed by clods of earth and big air spaces are also fatal to root development. Soil is just right for plowing when it readily falls apart upon being lifted up and turned over by the moldboard of the plow. Finally, harrow all ground plowed the day it is plowed.

Installment Buying

THE present decade has seen the development of a new plan of selling "on credit." In the older days, if one had sufficient credit he might be able to buy almost anything "on time." That is, he took the article home and paid for it when he could, or when he had to. The new order is the installment plan in which the buyer promises to pay a stated amount at stated times, the bill of sale binding him to do this and also leaving the title to the article vested in the seller until the last payment is made. In this way people who could not have purchased "on time" in the old days are enabled to have many things they could not otherwise have.

Investigation shows that the volume of installment business is immense. For instance, it is found that eighty per cent of the motor vehicles are purchased on the installment plan, and eighty-five per cent of the washing machines, sixty-five per cent of the vacuum cleaners, seventy-five per cent of the phonographs, eighty-five to ninety per cent of the furniture, twenty-five per cent of the jewelry, and thirteen per cent of the radios are bought on the same basis.

It used to be charged, whether rightly or wrongly, that leading bankers and investors would periodically squeeze business and cause panics for the purpose of making money. Even if this assumption were correct in past times (which we doubt) such action today would be disastrous to all concerned. Future profits and the continuation of good times depend upon the continuation of good wages and good times so that the installments may be met when due. Failure to pay out in this matter would mean the bankruptcy of manufacturers and the failure of banks and other loaning and investment institutions.

Time for Action

Readers Can Help Secure Honest Fabrics Legislation by Urging Their Senators to Support the Truth-in-Fabrics Bill.

THE person who walks into a grocery store and buys a pound of oleomargarine knows what he is getting. The oleo is labeled. The manufacturer and merchant has to comply with several regulations which make it impossible for the customer to be deceived into thinking he is buying butter instead of a cheaper substitute.

Strange as it may seem, the public is afforded no similar protection against the unscrupulous manufacturer or dealer who would sell goods made of shoddy to unsuspecting buyers at virgin wool prices.

Ever since 1913, when a truth-in-fabrics bill was introduced into Congress, farm leaders, and others interested in protecting the public against fraud, have been trying to secure the passage of an honest fabrics law similar to the pure food laws. Wool producers have had double interest in such legislation, as the use of shoddy seriously affects the market for virgin wool. For thirteen years, however, the large woolen manufacturers of the eastern states have been successful in their opposition.

Early in the present session of Congress Senator Arthur Capper again introduced the truth-in-fabrics bill which was not even reported out of committee in previous sessions. The Senate Committee on Interstate Commerce has made a favorable report on this new bill and it is now on the Senate calendar awaiting action.

The purpose of the bill is "to prevent deceit and unfair prices that result from the unrevealed presence of substitutes for virgin wool in woven or knitted fabrics purporting to contain wool and in garments or articles of apparel made therefrom." It provides that all mixed woolen goods shall bear a label giving the registration number of the manufacturer and the proportion of virgin wool and other material (shoddy) they contain. In the case of woven or knitted fabrics, such information is to be stamped on the back or on the selvage of every yard. In the case of garments the information is to be printed on a cotton tag to be sewed to the material. Yarn, too, is to be properly labeled.

Altho practically every national farm organization is backing this bill, the woolen manufacturing interests are doing all in their power to kill it. Out of pure self-interest every farmer in the country should write to his senators urging them to give their active support to Senate Bill 1618, the Capper Truth-in-Fabrics Bill.

Pennsylvania farmers should write to Senators George Wharton Pepper and David A. Reed, Washington, D. C. New Jersey readers should address Senators Edward I. Edwards and Walter E. Edge, and New York readers Senators J. W. Wadsworth, Jr., and Royal S. Copeland.

R. F. D.

IN CERTAIN places a lot of worrying is being done because rural mail carriers are not working hard enough. The worriers state that the carrier who covered his route in nine or ten hours in the horse-and-buggy days now makes the trip in his automobile in three or four hours. They find it convenient to overlook the long winters in the northern part of the country which force the mailman to go back to his horses and sleigh. They forget about the great volume of mail now handled in mid-winter when, on some rural routes, a wagon box on a pair of bob sleds has to be dragged over the snowdrifts from morning until long after dark.

It is suggested that the rural routes be lengthened in the interest of economy. This expedient might work in the South, where roads are not closed to automobiles by snow, ice and mud during several months of the year. But in the hill sections of the North the lengthening of routes can result only in poorer mail service to farmers in the winter when the regular delivery of their mail is most important.

Recently the postage rates on several classes of mail matter were raised, for the purpose of increasing the revenue of the Post Office Department. The increased rates actually resulted in decreased revenue, for many people refused to pay the high postal charges. It is to be hoped that similar lack of foresight will not characterize attempts to effect economies in the operation of the rural delivery system.

Creating Wealth

WE REMEMBER diagraming a sentence in our schoolboy days which read: "There is not a dollar of wealth produced which is not pulled from the sea, dug from the mines, or produced from the soil." It is well worth while to recall that statement in these days when men talk so glibly about "increased wealth." The mere accumulating of money by getting it from others in the way of profits is not adding to the country's wealth. The production of new materials and the conversion of raw products into the finished form alone adds to the real wealth of the world. Many industries and many lines of activity enter into this work, but let it not be forgotten that much that passes for making money is merely taking money.

Modern Commerce in Food

THE average family table presents a different appearance today when set for a meal from what it did a few years ago. Then, only foods in season in the community were to be found. Now, we may have and most families do have a variety made up of products from the ends of the earth in addition to the home staples. Modern enterprise and modern systems of transportation have brought this about. We believe this greater variety of food during the winter season is responsible for the better physical condition of the people when winter ends. But the greater variety is not all caused by the ease with which imported products may be purchased. The same period has developed the principle and practice of canning and storing perishable foods so that we may have even home-grown fruits and vegetables the year around.

Washington Letter

PROPOSED FARM LEGISLATION.—Hearings on the proposed product agricultural disposal legislation have so far developed much evidence showing that in certain sections of the country, especially in the Corn Belt states, the price range of farm products is below that of industrial commodities and labor. It has been further shown by spokesmen for the Corn Belt committee of twenty-two that transportation companies, industry and labor have been aided by special legislation.

These men say they are asking only for such aid for agriculture as other groups are receiving, but as Dr. T. C. Atkeson, of the National Grange, aptly points out, they have overlooked the fact that aid for the railroads, industries and labor has been effective to the extent that these groups are able to control the supply. No suggestion has yet been offered as to how agriculture is going to control production to prevent an over-supply of those farm products the prices of which are artificially boosted by government legislation.

BILL HAS FEW FRIENDS.—The new bill presented by the Corn Belt committee has apparently fewer friends on the House committee than the original Dickinson bill. The committee representing the farmers in the Middle West have placed themselves in a peculiar position. The agitation for surplus disposal legislation began in the Corn Belt states. The chief concern was getting rid of the corn surplus. Now the Corn Belt delegates have laid themselves open to the charge of wanting to try out their remedy on wheat, cotton, cattle and hogs. As Congressman Tincher says, they propose to take $100,000,000 out of the public treasury for the benefit of the corn grower, yet the wheat, the cotton, cattle and hog raisers must get their money from the equalization fee. The equalization tax is to be levied on wheat, cotton, cattle and hogs but not on corn.

If these are the only products to be affected by an equalization fee, the Corn Belt delegation is being asked why are not the wheat, cotton, hog and cattle raisers here asking for this legislation? Members of the House agriculture committee from districts outside the Corn Belt are saying that the farmers in their districts do not want it.

It was developed at the hearings that the farm relief bill presented by the Middle West delegation would use the Federal taxing power in collecting the equalization fee.

WOULD HOLD CORN UNTIL FALL.—The admission was made by Charles E. Hurst, president of the Iowa State Farm Bureau, that the only immediate help that the corn grower would receive from the bill would be the proposed appropriation of $100,000,000 from the $250,000,000 revolving fund to purchase and remove corn from the market this spring, holding it over until next year when there would be more hogs to feed it to. This led some of his hearers to raise the question in their minds as to why, if this be true, the Corn Belt farmers did not ask for a direct $100,000,000 corn storage appropriation to stabilize their market, and drop the scheme to levy an equalization fee or tax on wheat, cotton, cattle and hogs.

FARMERS OWN LAND BANKS.—Loans made by the Federal Land banks during the year 1925 accommodated 39,905 borrowers, with a total of $127,355,000, compared with 47,324 borrowers who obtain- $165,510,000 in 1924. The Joint Stock Land banks advanced to 19,699 borrowers $131,430,000 compared with $74,586,000 to 11,390 farmers the previous year. These figures indicate that there was a falling off in the amount of loans made by the Federal Land banks and an increase in the number closed by the Joint Stock Land banks.

The farmers, thru their local National Farm Loan Associations now practically own the twelve Federal Land Banks since they have furnished nearly $52,000,000 out of the $53,769,000 in the capital account of these banks.

A bill has been introduced in Congress (H. R. 3,860) amending the farm loan act providing that a local agent may be appointed in counties where no local loan associations have been formed, whose duties will be to advise farmers as to how to take advantage of the act, assist them in making applications for loans, and make preliminary preparations, forward their papers to the bank in their district.—E. E. Reynolds.

Harrisburg Letter

STUDYING HOME MARKETS.—Arrangements have been made for special studies thruout the spring and summer of the manner in which the smaller cities and the larger boros of Pennsylvania are being supplied with produce by trucks and individual enterprise and also of the extent urban dwellers are driving to the farms to purchase their fruits and vegetables. A campaign is being gotten under way by the State Department of Agriculture to get people to realize the immensity of the "front door markets" in Pennsylvania. Work of the State Bureau of Markets has developed to a remarkable extent the manner in which many cities of the state are depending upon truck line service for supplies and how apples, potatoes and other articles are furnished by gasoline instead of steam.

Settling the affairs of the nation—Then and now.

MONEY FROM A CURSE.—Apparently the State Department of Forests and Waters has turned to good advantage the wreckage left on state forest reserves by the chestnut blight and last year, according to accounts of the Department, something over $25,000 was received from sale of blighted chestnut timber. The great bulk of this was cut and sold off the reservations in southern Pennsylvania.

EXTENDING INSPECTION.—April plans of the State Bureau of Animal Industry contemplate considerable extension of the areas of inspection of cattle for tuberculosis over the scale on which the work was done in February and March. More requests for inspection have come from counties where the idea has been slow to take hold and since there is money in sight for payment of indemnities there is less hesitancy.

BIGGER WEASEL CATCH.—Judging from the way weasels are being turned in at the offices of the State Game Commission the catch since the first of the year will be something unique. Last fall there was considerable effort made to thin out the nuisance in some of the agricultural counties.

ASKING ABOUT PATROLS.—It is very evident that some of the people who did not approve of the policy of the State Department of Agriculture in enforcement of the Japanese beetle quarantine have been getting on the job and letters have come to the State Capitol asking whether there is to be "dry" law linked up with bugs and potato wart quarantines.

FARM LABOR REQUESTS.—Statements of the State Employment Service present a singular situation in regard to farm labor. In some sections, such as Allentown, Harrisburg and Johnstown, there are requests for men, but Lancaster and Reading report little doing. In some sections tenant farmers are wanted and married help seems to be in demand in other parts. Where there is much railroad and road building activity farmers are seeking help.

MORE VOCATIONAL WORK.—State vocational work is being projected for this spring on the most extensive scale yet undertaken by the Department of Public Instruction and plans for the establishment of additional schools which will give attention to such branches are being considered. The number of individual projects, which were so successful last fall, bids fair to increase materially among the young people.

AS TO REGISTRY.—Absence of Secretary of Agriculture Frank P. Willits from the Capitol due to a motoring accident resulted in delay in issuing the formal decision in the Holstein-Friesian registry controversy. It is expected by April 1st.

PAYMENTS NEARLY FINISHED.—When $1,500,000 is paid out April 1 by the State Treasury all of the school payments for this spring will be cleared up or more than $10,000,000 paid on the dates fixed by the Legislature. The same course was followed last fall.—Hamilton, Harrisburg.

New Jersey Letter

VEHICLE DEPARTMENT CHANGES.—During the week ending March 27 the Senate passed over the Governor's veto a bill which would segregate the Motor Vehicle Department from the office of the Secretary of State. The bill further provided that William L. Dill, the present Commissioner of Motor Vehicles, be continued in the office of Commissioner until December, 1930, at a salary of $7500. Another measure, companion to this bill, would abolish the office of assistant Secretary of State, at present held by Mr. Dill. This companion measure likewise passed the Senate over the Governor's veto.

NORTH JERSEY FARMER CONFERENCE.—Presidents and executive committe members of the central and north New Jersey County Boards of Agriculture met at Somerville on March 27th to discuss membership plans and a program for the coming season. The conference followed a similar meeting in South Jersey earlier in the month, and is in line with the state farm bureau efforts to stimulate membership and local activities in all sections of the state. The question of assigning county membership efforts on the quota basis has been considered within the last month, the majority of counties accepting a quota which is very close to the five-year average of membership in the various County Boards of Agriculture.

NEW HIGHWAY ROUTE PROPOSED.—In central New Jersey interest has centered in the recently proposed state highway route to begin at New Brunswick and join the Philadelphia state highway at the Delaware River bridge at Stockton. A bill providing for such a highway, recently introduced in the Assembly, has made fair progress. The route would tie up three county seats, from New Brunswick passing thru Millstone, Manville, Somerville, Raritan, Three Bridges, Centreville and Stockton. Introduction of the bill has incited residents of towns nearby, but not on the proposed route to suggest numerous re-routings, local arguments sometimes being advanced with considerable heat.

BRIDGE CONTROVERSY WANING.—New Jersey has now enacted legislation that makes the tolls for the Camden-Philadelphia bridge conform to similar provisions passed by Pennsylvania this year. The Delaware River Bridge Joint Commission is empowered to agree with Pennsylvania at once on the rate of such toll charges. Some parcels of land not needed in the completion of the bridge and also several other blocks of land adjacent to the vehicular tunnel under the Hudson River may be disposed of by the state. These measures have relieved the situation, which has caused considerable agitation by South Jersey farmers and others who have held to the collection of the tolls on the Camden-Philadelphia bridge.—B.

New York Letter

PRIZES FOR HOLSTEINS.—Agricultural fairs and dairy cattle shows in 1926 will share in $25,000 cash prizes offered by the Holstein-Friesian Association of America, for showings of Holsteins. The awards will be made in New York state, other states of prominence in Holstein breeding, and in district, regional and national dairy shows and will be in addition to the regular prizes of fairs and shows. A new feature is the state herds at the National Dairy Show. A sliding scale of prizes has been effected as follows: One herd, $75; two herds, $100 and $75; three herds, $125, $100 and $75; four herds, $150, $125, $100 and $75; and for five or more herds, $250, $150, $100, $75 and $50. This takes the place of the old ruling insisting on at least five entries to fill the class. Besides these prizes, there will be a special of $500 on this same class.

GREAT KRAUT SECTION.—Cabbage growers around Geneva expect to produce 25,000 tons of sauer kraut this season. This is the greatest single kraut section in the world. The product is fermented, cooked and canned and stored until merchandised, rather than dumped on the market.

VIGILANCE SERVICE.—Thirty-two counties now have posted farms under the farm bureau's vigilance service to protect from thieves. A new farm bureau service is that of special orders of hard chestnut coal to the various counties for distribution to poultrymen only for use in running brooder stoves, thru special arrangement with the coal companies and railroads. Five carloads have already been delivered for this especial use.—M. G. F.

Agronomists Agree that Nitrate of Soda is Best for Tobacco

The following committee of well-known agronomists met recently to outline recommendations for fertilizing bright and dark tobacco in North Carolina and Virginia:

Dr. W. W. Garner, *U. S. Dept. of Agriculture*
T. B. Hutcheson, *Va. Polytechnic Inst.*
C. B. Williams
L. G. Willis
W. F. Pate, *N. C. College of Agriculture*
E. G. Moss, *Tobacco Sta., Oxford, N. C.*

They agreed on a list of mixtures for various soils and varieties of tobacco, which we will be glad to send you on request, and every formula contained the recommendation that at least one-half the inorganic nitrogen *must* come from Nitrate of Soda.

These men have had plenty of experience with fertilizers and when they make such a recommendation for tobacco, you know that it is right.

Our free bulletins contain valuable information which has helped thousands of farmers to grow bigger and better crops. They tell how and when to apply Nitrate of Soda for best results. A postal to our nearest office will bring them to you. Name crops in which you are most interested and, for our information, mention the number 2331

Takes the "Guess" Out of Your Fruit Growing

This big, handsome book tells how, in 1925, 85,000 of the million Kelly Trees were certified to be "True-to-Name" by the Massachusetts Fruit Growers' Association, whose Lead Seal stays on the tree until it bears. Contains much valuable, helpful fruit-growing information.

You take no chances with Kellys' Trees. All are propagated on whole root, imported seedlings—not piece roots—which means better and larger crops.

Write now for your copy of the big Kelly catalog. Then order soon to insure getting your share of our guaranteed "True-to-Name" stock. We have no agents—you deal direct with us.

Garden and Truck Crops

New Spinach Varieties Lengthen Season for Greens

A FEW years ago spinach was considered chiefly an early summer and a late fall crop; now with the introduction of new varieties and strains, and the use of a type long listed in seedmen's catalogs but seldom planted, we may provide a succession of greens thruout the growing season. Spinach has become a well-known vegetable—popularized largely thru the recommendations of doctors and nutrition workers that this is a good food for adults and children alike. Families that had never used this vegetable are now demanding it that their children may secure benefit from its mineral salts, vitamins and roughage.

The First Spring Spinach

The first spinach to be produced in the spring in Pennsylvania is either fall seeded spinach, or what is known as "hard-ground spinach." The former is either broadcast or sown in rows in the fall, usually during the first two weeks of September in Pennsylvania. It just makes a good start in growth when winter comes and for surest results should have the protection of a mulch after the ground freezes. If there is not plenty of snow to cover the ground, and serve as a mulch, a light covering of straw is needed. For this fall-seeded spinach the Virginia Savoy is selected as the sort most hardy to cold, as well as resistant to the yellows or mosaic, a disease that has become quite severe in the middle states during the fall season.

The "hard-ground spinach" is broadcast in March on ground that has been fall plowed and harrowed. The Bloomsdale type is also used for this crop, but since the yellows is only a fall-crop disease, it is not necessary to use Virginia Savoy. Any good strain of Bloomsdale Savoy should be satisfactory.

For seeding in rows as soon as the ground may be gotten ready in the spring, some sort is desired that will not bolt to seed during the brief periods of hot weather that usually come in May and June. The King of Denmark and Long Season have been popular for this purpose because of their heat-resistant qualities. However, for market purposes the type is not so well liked by many growers, who prefer the more crinkled and attractive Bloomsdale. The old Bloomsdale Savoy shot to seed very quickly in hot weather but two varieties of this type developed in and introduced from Holland, and found in certain seed catalogs this year, it is believed will fill the needs of the most critical grower or market. These varieties are long standing Bloomsdale and Princess Juliana, the latter named in honor of the daughter of the Queen of the Netherlands. Both are worthy of trial by any grower for the early summer crop.

Those growers who have irrigation attempt to bring in succession, all thru the season, crops of the same type spinach as that seeded in the early spring. This is a difficult task thru July and August and for growers on light soils with no irrigation, almost impossible. The New Zealand type of spinach, however, thrives in the hottest of weather and is being seeded around May 1 to fill in the gap caused by the failure of other spinach in mid-summer. The flavor is somewhat different from ordinary spinach, it requires different handling in the field and requires more time to harvest. The product, however, is tender, requires less cleaning than other types of spinach in preparation for cooking and holds up well on the market.

During August the Bloomsdale type, preferably the Virginia Savoy variety, is seeded again to provide "greens" thru the late fall and up to Christmas time.

Not Due to Variety Alone

It is well to remember that bolting to seed is not dependent on variety alone. New Jersey growers feel that the difficulty may be caused by crowding of plants in the row, and it is probable that drought may be a factor since drought usually accompanies hot weather. Spinach plants should be thinned to four inches in the row to secure good sized plants that will have less tendency to go to seed.

It should be noted here that New Zealand spinach is a large sprawling plant of entirely different habit of growth from the common spinach and should be so seeded that it may later be thinned to two feet in the row. All thru the season the tender shoots that grow from the axils of the leaves on the many branches, may be cut when a few inches long and will be replaced by similar growth, so that an almost continuous crop is harvested from the same plants until freezing weather.—C. R. Mason.

Asparagus for Philadelphia

IT PAYS to grow green asparagus for the Philadelphia market. Last year this green "grass" brought a premium of five to ten cents per bunch over the white and in some cases as much as fifteen cents. During the last week in May white grass was quoted on the Philadelphia market at \$3.00 to \$3.75 per dozen bunches and green at \$4.00 to \$6.00.

One of the large receivers of nearby asparagus in Philadelphia stated that farmers could easily obtain higher prices if they packed their grass with more care. He said: "Bunches should not weigh less than two pounds and should not have big stalks on the outside and 'pencils' in the middle."

He told of one grower who has established a reputation for his asparagus and for several years has averaged about fifty cents per crate of a dozen bunches above the market. This man grades his asparagus into five sizes. The first he calls Colossal, next Extra Fancy, then Fancy, No 1's and Culls. This procedure would hardly pay the grower with only a small output, but he would profit by making at least three sizes, or grades, such as Large, Medium and Small.

Crooked stalks, even tho they are of good size, should be packed separately, since they detract from the appearance of the other stock. If it is just a slight curve at one side of the top, the tips should be turned in making a more compact head of the bunch.

In tying the bunches a colored tape makes an attractive appearance and does not cut the grass like binder twine or cord. If the tapes are placed close to each end, the bunch will appear longer than if they are put closer together. The butts should be evenly trimmed and the bunches washed. Some growers wash the asparagus before bunching, but many of the best growers wash the bunches with a scrubbing brush before packing them in the crate. In doing this they try to avoid getting water on the tips

since this is likely to cause them to get musty.

Some growers, particularly in the West, wrap the lower part of the bunch in waterproof paper on which their trade mark has been printed. When a first-class product is handled in this way it undoubtedly helps the sale, for if the grass is good, the housewife will recognize the label the next time she goes shopping and will ask for it in preference to an unmarked brand.

Dealers in Philadelphia seem to differ in their opinions as to whether this would be a desirable practice with nearby grass. Some contend that it would be confused with western stock, but others feel that this would be more than overcome by the attractiveness of the pack and also because the paper aids in keeping the grass from wilting. A grower that has sufficient output to make it worth while will find that it pays to have his label somewhere on the bunches or package.

Must Please the Housewife

Many of these may seem unnecessary to the grower but they pay big dividends. The housewife buys "by the eye" and the farmer is well repaid if he can please her.

The small crates holding a dozen bunches are coming more into favor in the East. The West uses them almost exclusively and the nearby farmers are following their example. These crates are easier to handle and are not as cumbersome as the old style crate or the strawberry crate. The grass is displayed attractively to the buyer and he prefers this package, since he can see what he is getting. It also has the advantage of not being such a tight pack and heating is less frequent. In some sections moss is placed on the bottom of the crates and soaked in water. It keeps the asparagus fresh and green.

Sometimes a waterproof paper is placed in the bottom of the crate and water put in before the crates are loaded. This may be fine for the grass but it is sloppy work for the men who handle it. In other cases both moss and paper are used. These small crates have another advantage in that a dealer can easily re-ship them by express to customers in towns such as Harrisburg, Allentown or Reading. He knows that the grass will be more likely to arrive in first-class shape.

Unfavorable Weather Last Year

Weather conditions in the East were very unfavorable last year, being both hot and dry. There was a predominance of white asparagus on the market. The acreage in New Jersey this year is estimated to be 9,000 acres, compared with 7,000 last year. Pennsylvania grows about 1,000 acres of this crop. Georgia, South Carolina, Maryland and Delaware also report increased acreages. California shows an estimated increase of 2,000 acres bringing the total to around 10,260. Asparagus is not a cheap crop to grow and the increase in plantings indicates that it has been generally profitable.

It is too early to say just what the season holds for growers in this vicinity, or elsewhere. The first small lots of California asparagus to arrive in Philadelphia sold as high as \$20.00 per dozen. This was during the early part of March but since that time prices have dropped to lower levels. On March 24 the first car of California stock to arrive by freight was offered and the market that day ranged from \$5.50 to \$7.00 per dozen bunches compared with \$4.50 to \$10.00 last year.

The movement from the West to this city has been lighter than last year, but is increasing rapidly. South Carolina started to ship to this market during the latter part of March last season, but reports from that section state that the crop has

All prices f. o. b. Detroit, subject to current Federal excise tax.

All models equipped with full balloon tires.

There are Chrysler dealers and superior Chrysler service everywhere. All dealers are in position to extend the convenience of time-payments. Ask about Chrysler's attractive plan.

All Chrysler models are protected against theft by the Fedco patented car numbering system, exclusive with Chrysler, which cannot be counterfeited and cannot be altered or removed without conclusive evidence of tampering.

CHRYSLER "58"

Enthusiastic owners—increasing at the rate of more than ten thousand a month—assert that Chrysler "58" delivers more of power, sustained speed, pliability, fuel mileage and charm of appearance than any other car even remotely approaching its electrifying new low price.

Its speed of 58 miles an hour is given with the smoothness and comfort of 20, and it holds its own on any road with cars that cost vastly more.

Like a flash it whisks you away in traffic, doing its 5 to 25 miles in 8 seconds with delightful swiftness and handling so easily that you can drive it all day long with comfort.

And with this super-performance, Chrysler "58" is capable of an economy of 25 miles to the gallon of gasoline.

Your nearest Chrysler dealer is eager to show you why only Chrysler can produce such unparalleled performance and quality at the price which makes Chrysler "58" the supreme motor car value of today.

Small Fruits to Grow in the Home Garden

THE small fruits have three advantages over the tree fruits that commend them to home gardens, rural or suburban—they occupy little space, begin to bear quickly and require little or no spraying. The latter advantage is particularly impressive. Spraying is the most intricate and certainly the most disagreeable feature of fruit growing; if it can be avoided, so much the better. An additional attractive feature of the small fruits is their season of ripening; they come in early summer, before most of the tree fruits, thus making possible a succession of home-grown fruit from June until the last of the winter apples have been taken from the cellar.

GRAPES

The grape is the king of small fruits. It will give larger returns with less trouble than any other. It is attractive as an ornamental as well as useful as a fruit, when trained against the house, over the porch or garden fence and when providing a grateful shade in the arbor. The most important factors in successful grape growing are a warm site, a well drained soil, and proper pruning. The common mistake is to not prune heavily enough. Under pruning is responsible for many weak vines, in this respect the grape resembles the peach.

If grown on the ordinary two or three-wire trellis the best results will be secured by training them to the four cane Kniffin system. Four new canes are left each year, two on each side, and springing from as low down on the trunk as possible. These canes should have from six to fifteen buds each—no more—depending on the age and strength of the vine. The weaker the vine the harder it should be pruned. Spur pruning—cutting all new canes back to one or two buds—is not as desirable as renewal pruning in which new canes are left each year and the old canes removed.

Arbor Grapes Need Severe Pruning

When trained to an arbor the grape requires fully as severe pruning as when on a trellis. Many grape arbors are merely a tangle of vines, furnishing much shade but little fruit. On arbors a certain amount of spur pruning may be necessary but renewal canes should be the main objective.

Canes about one-quarter inch in diameter, and short jointed, are more productive than smaller or larger canes. They may be twice as productive as canes three-quarters inch in diameter, with buds eight to ten inches apart.

There has been little change in the approved list of varieties for planting in Pennsylvania gardens. A succession of dependable sorts, in order of ripening, are Moore Early, Winchell, Campbell, Delaware, Brighton, Worden, Niagara, Concord and Catawba.

Recent experiments have shown the value of grafted vines. Most of the vines in the eastern states are own-rooted, having been grown from cuttings. Grafted vines are more productive and the fruit is of higher quality. Several kinds of root stalks are useful; the Clinton, which was formerly used as a wine grape, is one of the best. Few nurserymen can supply grafted grape vines.

The best method of home grafting is that practiced by J. K. Gross, of York, Pennsylvania. A one-year-old vine of Clinton, or any other good stock, and a one-year-old vine of the desired variety are planted about six inches apart. In July shave a piece of the bark from each shoot, about one inch long, and bind the two cut surfaces together lightly with wool yarn. In two weeks the two have been united. The following spring cut off the top of the Clinton vine and the roots of the other plant, leaving a single grafted vine.

The Varieties from California

Eastern gardeners long have coveted the large clustered, sweet and pulpy grapes of California. These are varieties of the European species Vitis Vinifera. They fail in the East not so much because they are tender as because they are killed by a root louse, the Phylloxera, which is not serious on eastern varieties. The preventive is to plant vines that are grafted on resistant roots. The New York Experiment Station has demonstrated that we can grow California varieties here successfully with a little extra trouble. The Muscat, Hamburg, Chasselas Golden, and Lignan Blanc are desirable sorts.

Usually it is best to top work established vines of Concord or other eastern varieties. The Concord vine is cut off just below the surface of the ground, the stub is split and two scions inserted, as in cleft grafting the apple. No wax is used; the graft is merely mounded over with soil to the height of the top bud of the scion. In two years the canes produced by these scions bear grapes. Young grafted vines may be bought of California nurseries.

Mr. J. K. Gross, York, Pa., in his backyard grape garden. Mr. Gross is one of the most expert amateur grape growers in the country. He fruits the California varieties, with winter protection.

The California varieties will need winter protection, which is secured by covering the canes with six to eight inches of soil in late fall. In order to make it possible to lay down the canes they are started from near the ground; no trunk can be developed. Only two canes, each with four to eight buds, should be left to fruit. The fruiting shoots should be tied to the second wire of the trellis. These California varieties are so delicious that it is well worth while to take the extra trouble to produce them here. Mr. J. K. Gross, of York, has fruited many of them very successfully and there is no reason why similar results may not be secured thruout southeastern Pennsylvania.

May Require Spraying

Unlike other small fruits, grapes may require some spraying, even in the home garden. The chief enemies are black rot, mildew, rosebug and leaf hopper. A two-pound manila bag tied tightly over each cluster after the fruit is set and left on until the fruit is ripe is an effective method of protecting a few vines. Bordeaux, arsenate of lead and nicotine sprays are used commercially; in the home garden a prepared Bordeaux spray is more convenient. Three sprayings, one just before blossoming, another immediately after blossoming, and a third three weeks later, usually are sufficient. In most home gardens, however, grapes do fairly well without spraying.—S. W. Fletcher.

(To be continued)

Early Cultivation

ACCORDING to T. L. Guyton, Bureau of Plant Industry, Pennsylvania Department of Agriculture, cultivation of the orchard in the early spring will do much toward controlling certain insects and plant diseases. In the apple orchard the curculio will be controlled partially, and the early cultivation will do much to lessen apple scab infection.

It is very important that early cultivation be done in the peach orchard. This is especially true in the southeastern part of the state where the Oriental fruit moth has established itself. Up to this time no direct method of control by spraying has proved entirely satisfactory for this insect, but early cultivation, particularly discing, destroys such of the overwintering larvae of the peach moth as have spun up in the soil, and in such material as weed stems, and the like, on the ground. The cultivation should be quite thoro.

Controls Other Diseases, Too

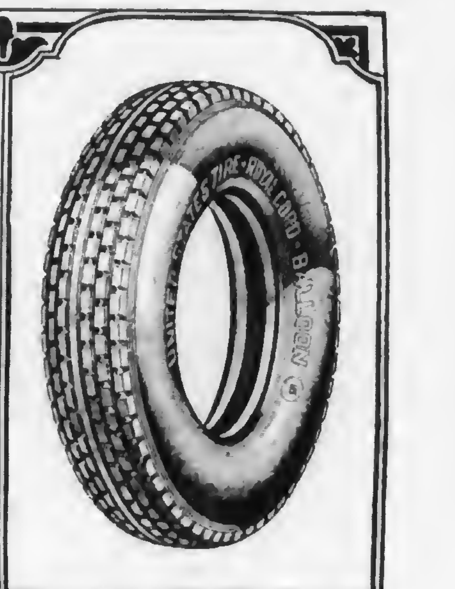
But not only will cultivation help control the Oriental fruit moth, it will do much to control the curculio and the brown rot of stone fruit. This disease overwinters, for the most part, in mummied fruit on the ground. If these fruits are buried deep and the top soil is kept rather dry by cultivation, the disease will not have a chance to produce the spores which are hatched from the mummied fruit and carried to the developing buds and young fruit on the tree.

In the grape vineyard early cultivation will bury the old leaves of the past season and will destroy the cocoons of the grape berry moth which may be upon them. The mummied berries, resulting from the attack of the black rot, will also be buried and not given a chance to produce the spores which infect the vines in the early spring.

Every county in Pennsylvania, thirty-one states and six foreign countries are represented in the student body of 3885 at the Pennsylvania State College. Centre County leads in the number of students, followed in order by Allegheny, Philadelphia and Luzerne.

Tapping a Rubber Tree on a U. S. Rubber Company Plantation

The United States Rubber Company now owns over 7,000,000 rubber trees—more than 5,000,000 of them are already producing *rubber for U. S. Tires,* and 20,000 employees are engaged in caring for them.



UNITED STATES TIRES ROYAL CORD BALLOON

Here are the Answers to Your Questions on the American Rubber Supply and Automobile Tires

Q—Where does America get its rubber?

A—The only important source of rubber *for all the world* is the rubber plantations in the Far Eastern possessions of Great Britain and Holland.

Q—Is America represented among the Far Eastern rubber planters?

A—Yes, the largest of all these Far Eastern plantations is owned and operated by the UNITED STATES RUBBER COMPANY.

Q—Do the United States Rubber Company Plantations produce any considerable quantity of rubber?

A—Yes, they produced 20,000,000 lbs. of rubber in 1925, and in the next few years the output will be increased about 75%.

Q—Then the growing of rubber by Americans for Americans is not a new thing?

A—No. In 1909, this Company acquired their vast tracts of ideal rubber growing land in Sumatra and Malaya.

Q—How large are the U. S. Rubber Plantations today?

A—The U. S. Rubber Company Plantations now comprise about 136,000 acres, with over 7,000,000 rubber trees, sixty miles of narrow-gauge railway, and 200 miles of motor roads. They give employment to 20,000 people.

Q—What does all this mean to me as a buyer and user of United States Tires?

A—The United States Rubber Plantations and their results have brought many benefits to every user of U. S. Rubber products of all kinds. For instance:

1. *Latex-treated Web Cord,* one of the outstanding major improvements in tire-building, announced by this Company in 1922.
2. *Sprayed Rubber,* the new standard of purity in crude rubber, of direct benefit to every user of any U. S. Rubber product.
3. *In Addition,* during the past 17 years, the U. S. Rubber Plantation Experts have conducted thousands of successful researches into improving rubber by *improving the rubber trees.*

Q—What is Latex-treated Web Cord?

A—This is the new cord structure for cord tires, combining maximum strength with maximum flexibility. *Questions and Answers on Latex-treated Web Cord* will be published shortly.

Q—What is Sprayed Rubber?

A—Sprayed Rubber is the new pure rubber. It is free from both acid and smoke. *Questions and Answers on Sprayed Rubber* will also be published at an early date.

Q—Will America ever be reasonably independent in its rubber supply?

A—Probably so, in the course of time. For instance, the U. S. Rubber Plantations will probably yield 15 per cent more rubber in 1926 than in the past year.

A Good Side Delivery Rake Plus a First-Class Tedder

TWO machines at the price of one is what you actually get in the Massey-Harris No. 3 Combined Side Rake and Tedder. By simply moving a lever, it can be converted from a side delivery rake into a tedder that shakes up the hay for the sun and wind to air cure. Saves valuable storage space because you have only *one* tool to shelter.

Massey-Harris
No. 2 Rake Bar Loader
meets the needs of the farmer who prefers a raker bar type loader. It loads from the lightest swath or from a heavy windrow. The hay is pushed well forward where it can be handled by *one* man.

Massey-Harris
Cylinder Loader
is built for loading hay quickly from the windrow without breaking off the leaves. The Loader hitches to the wagon without any lifting. It travels over rough ground without "whipping".

The Massey-Harris Catalog pictures and describes these labor-saving machines, also the Massey-Harris Mowers. Write for it today.

There's a Massey-Harris dealer near you; ask us for his name.

Staff Contributor and Adviser
Kirby Poultry Farm

Have Leg Weakness

I have a strange ailment among some of my S. C. White Leghorns. They will be two years old in April. They seem to have leg weakness. First they walk with difficulty and in about two days can't walk at all. Their heads are red. They are in fine condition and are laying. I took one to my veterinarian and he cut it open but could find no worms. So he gave it the name of "poly neuritis" but had no cure or medicine for the trouble but advised cod liver oil. Only the two-year-olds have it. Do you think it may come from much laying or forcing them, or what do you think of it or call it?—J. S. G., Franklin County, Pa.

Leg weakness is sometimes caused by ovarian troubles. Aside from feeding cod liver oil and isolating the weak birds in a sunny house, there is little to be done. If birds with weak legs are left in the laying house they are soon trampled and greatly weakened. Too much forcing and heavy laying might be a contributing cause to the leg weakness because of a weakened condition after a long winter. When these hens can have free range in the sunshine their condition will probably improve.—R. G. Kirby.

My Own Experience

MY EXPERIENCE with using soft coal in brooder stoves might be of interest to many readers of Pennsylvania Farmer.

On February 4, 1926, I put 400 Rock and Red chicks under two coal brooders with 52-inch canopies. I used soft coal for fuel for nearly four weeks, until I was able to get anthracite. I had about 300 pounds of hard pea coal left from last year, which I mixed with the soft.

The fires needed attention quite often, as only a little soft coal could be added without having a smothering effect on the fire. Four or five hours seemed to be the longest period of time it was safe to leave the fire without shaking down and adding coal. I made a practice of attending the stoves about eight o'clock at night, again at midnight, and at five in the morning.

While using this fuel, periods of calm weather caused the most difficulty in holding the temperature high enough under the hovers. When a breeze was stirring the fires always burned quite well.

When the fire gets low, an auto pump used under the grate for a minute will help it greatly. In spite of all I could do, the chickens were chilled several times. However, to date I have lost only ten per cent from all causes, which is not bad.

Cod Liver Oil from Start

I fed the chicks cod liver oil from the start, mixing the day's ration of oil for each house in a handful of mash and distributing this in the feed boxes. I gave them as good care as I knew how, and I feel that such care is imperative if a person is to receive utmost returns from poultry.

For baby chicks feed boxes should have sides about an inch high. These will hold the chicks for about a week. Then supply boxes with higher sides. When they are about four weeks old they will jump into boxes six or seven inches high. If they scratch the mash out cut a piece of hardware cloth or poultry netting with one-half-inch mesh to fit loosely inside the box.

The thermostatic control is always supplied with coal brooders, and can be had with oil burner, altho I would not advise it with oil. The thermostat needs to be watched as it is not perfect and has to be adjusted quite often.—O. J. B.

Young Mother—The doctor says people shouldn't kiss the baby; it isn't sanitary.

Caller—Poor little fellow; why don't you wash him?—Boston Transcript.

Jobs to Be Done at Night

POULTRYMEN usually base the length of their day on their interest in the business and seldom watch the clock. There are some jobs which can be done best when the hens are roosting. Treating hens for lice with blue ointment and sodium fluoride is not a long job when you can catch the hens. It is a nerve racking daylight job. Our method is to bring a lot of poultry shipping coops into the section where the hens are to be treated. Crate the hens at night. The next morning you can sit on the side of each crate in turn, remove the hens and free them as they are individually treated for lice. This morning treatment saves some night work but does not frighten the hens.

Leghorns are greatly disturbed by changing poultry house litter. Usually the litter in the front part of the house gets in bad condition first. By using a dim light and several tubs you can load up a lot of damp litter at night and carry it to a wagon by the door. Then the clean straw can be rolled in by the bale or pitched in by the forkful without greatly disturbing the flock. It needs only a little spreading as the flock will get busy in the clean straw the next morning and help distribute it over the floor. Tipping bales of straw into a laying house in daylight will send Leghorns to the roof and all such disturbances seem to reduce egg production.

Adding clean straw to the nests is a good evening job. Then the layers are not disturbed. An inspection of the birds on the roosts gives some indication of their physical condition. Test the weight by handling a few birds. If they are getting too heavy reduce the scratch grain so they will eat more mash. If they seem rather light increase the grain and they will eat less mash. As most hens seem to like their grain better than the mash it is not hard to regulate the amount of mash they will eat. They will eat plenty of the laying mash when they are hungry because of the small quantity of grain fed.

Colds can quickly be located by turning a flashlight along the roosts to bring out the eyes and beaks of the birds. A few culls may be found in some flocks by feeling the abdomens for the hard stone-like lump that gathers when the bird has a ruptured oviduct and the egg making materials are gathering in a hard lump in the abdomen. A bird of that type may eat and look healthy for many weeks but no eggs will ever be laid.—R. G. Kirby.

Eat Up Each Other

Can you tell what to do for my chickens? They are very fat and laying well. They are eating one another up. They pick at the vent until they get the entrails out. They have scratch feed in the morning, boiled oats and middlings at noon and corn at night; have straw for them to scratch in, plenty of oyster shell and water them often. Feed them scraps from the table with oats and middlings.—M. A., Fayette County, Pa.

The cannibalism probably started when one hen had a protruding oviduct due to the strain of laying. Other hens peck at the inflamed parts and draw blood. This arouses their appetite and cannibalism develops. Isolate all birds with sore parts around the vent until the wounds have healed.

Turning the flock out on range helps to control cannibalism, feather eating and egg eating. The birds scatter and become interested in other things and forget each other. At the same time feed a balanced ration containing twenty per cent meat scrap. Or use only ten per cent meat scrap if you have plenty of sour milk or buttermilk available.

Hanging a piece of beef in the house for the birds to peck at may help control the habit by attracting their attention and satisfying their appetite for blood and meat.—R. G. Kirby.

Cost of Pullet Flocks

THERE are a lot of poultrymen and general farmers who have to figure on setting eight eggs for every mature pullet produced which is suitable for winter egg production. The proposition works out in this manner.

From 800 eggs placed in the incubator they receive approximately 400 chicks. During the season they lose half the chicks due to brooder losses followed by the inroads of rats, hawks and other causes. That leaves 200 head of young stock and half of them are cockerels. The 800 eggs thus produce 100 good pullets.

Don't Underestimate the Amount

Other poultrymen have better luck and only require about five eggs in the incubator for every pullet produced. Some have very good luck and report unusually fine hatches followed by the successful raising of a large per cent of the chicks. However, it is the average that must be considered and there is a tendency for poultry owners to underestimate the amount of hatching or the number of baby chicks necessary to reproduce their pullet flocks.

This sometimes results in very little culling of the pullet flocks and undersized crow headed and poor type pullets are retained for winter in the hope that poor pullets will at least be better than half empty houses. There is always a sale for good pullets in the fall so it pays best to liberally estimate the number of eggs or chicks required to produce the required pullets and then cull rigidly and sell the surplus, if any, rather than overcrowd the buildings. This liberal estimate may only produce enough pullets for the home flock.—R. G. Kirby.

Dog Law Enforced

DOG law enforcement agents thruout Pennsylvania are making a close check-up on unlicensed dogs, as well as dogs carrying old licenses, and every indication points to a total licensed dog population of over 500,000 by the end of the present year. The total number issued during 1925 was 479,222. A total of 218,017 individual dog licenses for 1926 were issued up to February 1st.

FEED MORE

Linseed MEAL

In the Ration

You may have been feeding some Linseed Meal for its conditioning value, but do you realize that it is often a **100% investment**, as regards its protein value? Investigation may bring you to the same conclusion as Mr. Kit Vickery, of Joplin, Mo., who says:

"After reading Prof. Morrison's booklet, I find I have been feeding only half as much Linseed Meal as I should."

What Dairymen Report

Walter Kerr, Cohasset, Mass.: "Linseed Meal is the most essential part of our rations—20%."

F. H. McClellan, Wellington, Ohio: "Dropping Linseed Meal would mean a 5 to 8% drop in milk production."

Ed. Tansky, Greensburg, Pa.: "My ration is always 15 to 20% Linseed Meal regardless of cost."

Rolla Oliver, Independence, Mo.: "We never feed less than 100 lbs. Linseed Meal to 16 cwt. of other feed."

What Cattlemen State

W. E. Siglin, Dunlap, Iowa: "My cattle, finished on 4 lbs. Linseed Meal a day, topped the market."

R. J. Barrett, Dallas Center, Iowa: "Shortens finishing period thirty to forty days."

What Hog Growers Say

J. H. Rigdon, Waterloo, Iowa: "As a substitute for tankage it showed surprising gains."

Doran Bros., Ohio, Ill.: "Worth $75.00 last season feeding hogs."

PROFITABLE ALSO FOR FEEDING SHEEP, HORSES AND POULTRY. How much you should use in your rations, the books listed in the coupon below will tell you, and our Secretary will be glad to help you in any feeding problems.

May Need More Minerals

I have a cow that was milked up to the time of freshening. She had her calf before we expected so she has had no rest period. I wonder if she should have any special feeding, or perhaps a mineral mixture. If so, what? She is giving about eighteen to twenty pounds of milk per day, with six quarts grain, silage, hay. We are also having trouble about cows losing teats, i. e., they keep milking harder until finally they lose the quarter.—R. J. S., Crawford Co., Pa.

Cows that have very little rest between freshening periods are more likely to be in need of minerals than those that have had a considerable rest period. Furthermore, those that get timothy hay or blue grass instead of leguminous roughage, such as clover or alfalfa hay, are more likely to need supplemental minerals. A mineral mixture which is recommended by the College Feed Conference Board is made up as follows:

666 lbs. of steamed bone meal
666 lbs. ground limestone
666 lbs. common salt
2 lbs. iodized calcium

It would perhaps serve your purpose equally well and would be less trouble to make up, if you were to mix common salt with steamed bone meal at the rate of four parts of steamed bone meal with one of salt. Then put the mixture in a box and allow the cattle to have access to it at will.

Regarding the udder trouble with your cows, it would appear that your herd has an infection of garget or mammitis. Probably the best plan when you have the next case would be to call your local veterinarian. Since this disease is likely to be contagious, it is best to milk last the cows which are affected with the trouble, or at least wash your hands thoroly after milking a cow that is infected.

To relieve the trouble, hot water has been found as good a remedy as any. Bathe the affected quarter of the udder several times a day with hot water. Then massage the quarter thoroly and rub some camphorated oil or vaseline on it. Milk the affected quarter frequently and be sure to milk this quarter into a pail so that the milk can be thrown away and not be allowed to remain on the stable floor as this may spread the infection.

It is also desirable to dip the ends of the teats into a disinfecting solution after milking, so that bacteria may be killed before they get on the teats of the other cows from one that is infected.—A. A. B.

Crops for Ensilage

Please let me know what it is best to plant to fill a silo and what can be planted?—T. G. M., Carroll County, Md.

The best crop for a silo is corn. No other plant seems to have as many desirable features, all things considered, as does the one just mentioned. Of course, there are a good many other crops that can be used for silage. The next best crop after corn is probably sorghum. Sun flowers probably take third place, while small grain crops and legumes are fourth in the order of popularity among the owners of livestock.

At the Pennsylvania State College, a considerable number of experiments have been run concerning the feeding value of different kinds of silage. Red clover was successfully ensiled by cutting it while the dew was on it and adding a considerable amount of water when it was put into the silo. Two rations were fed; in one the roughage was entirely clover hay, in the other the roughage was partly clover hay and partly clover silage. The results of the trial indicated that the red clover silage ration was much superior for milk producing purposes than clover hay alone.

Canada field peas and oats were also tried out as a summer silage project. Results indicated clearly that oat and pea silage was not equal in feeding value to corn silage, but that the oat and pea silage was superior to a ration containing no silage at all.

Corn and Soy Bean Mixture Tried

A mixture of corn and soy beans for milk production purposes has also been tried. It was found that there was a slight margin in favor of the corn and soy bean mixture, but not enough to warrant the extra trouble and expense of producing the corn and soy bean silage as compared with the straight corn silage.

Sun flower silage has been tried out at this station, but with unsatisfactory results. The sun flower silage proved to be unpalatable and it was difficult to get the cows to eat sufficient quantities of it. They declined in milk production quite rapidly on this silage, but when changed to corn silage they improved immediately. This experiment was repeated with a mixture of one-half corn and one-half sun flowers. This mixture of corn and sun flowers was superior to sun flower silage, but it was inferior to a good grade of corn silage.

In view of all things in this connection, it is a safe conclusion that where corn can be grown successfully it will probably make the most satisfactory crop for the silo.—A. A. B.

Which Phosphate Better?

I use at present acid rock phosphate—sixteen per cent—in my cow barns as an absorbent. In reading over the literature put out by raw rock phosphate companies I find that they claim a ton of raw rock contains twenty-eight per cent phosphoric acid which can be made available by running it thru the barn via the manure, the decay in the vegetable matter in the manure creating enough humic acid to act on the floats in the same way as sulphuric acid. Do you consider raw rock superior to acid rock when used in this way? In other words, if I can get raw rock at $15.50 am I getting more for my money than buying acid at several dollars more and will at least sixteen per cent of the phosphoric acid in the float be available the same year as applied with the manure?—E. P. A., Chester County, Pa.

A comparison between the use of raw rock phosphate and acid phosphate at the Pennsylvania State College indicates slightly higher yields from the use of acid phosphate. At the Ohio Experiment Station it was found that as a rule the use of acid phosphate was more economical and profitable than raw rock phosphate. When raw rock phosphate is used according to the method you mention in your letter, you could expect about the same returns for the money invested as from the acid phosphate.—A. A. B.

Hold Their First Field Day

Centre County Dairymen Meet at State College

MEMBERS of the Centre County Cow Testing Association held their first field day exercises, March 22, at the Pennsylvania State College. The program was in charge of County Agent R. C. Blaney.

The respiration calorimeter, the largest of its kind in the United States, was the first point of interest in the day's program. As most of the visitors were familiar with the Armsby feeding standard more than usual interest was shown in the calorimeter as its purpose was explained by workers in the Institute of Animal Nutrition. With it, H. P. Armsby, formerly in charge of the Institute of Animal Nutrition, conducted a series of investigations with dairy cattle which resulted in the formation of the feeding standard now carrying his name.

College Barn Visited

The college dairy barn with the herd of 130 head, which includes five dairy breeds was next visited. Here A. A. Borland, head of the dairy department and staff contributor of Pennsylvania Farmer, outlined the methods of herd management and mentioned the steps followed in the production of Grade A and Certified Milk. Proper methods, according to Professor Borland, are of more importance than buildings and equipment in the production of clean milk, and the dairyman who produces milk of a high grade usually finds less marketing competition than the man who is content with the production of milk of a lower grade.

Option's Ima Daytonia, the new state Jersey champion in the 305-day class, came in for her share of attention from the visitors. She recently qualified for the second gold medal in two consecutive years with an unofficial production of 14,019 pounds of milk and 670 pounds of butterfat in ten months. She has now produced 26,679 pounds of milk and 1292 pounds of butterfat in two successive ten-month periods.

Ralph Peck, Nittany, placed first in the Holstein judging contest and fourth in the judging of Guernseys. J. R. Hartle, Bellefonte, was second in Holsteins and third in Guernseys. B. W. Carner, Hublersburg, was high man in the Guernsey class with a score of 98.5. Second place in this class went to Harold Brungart, Rebersburg.

After judging the classes on the basis of breed type the contestants then tried to place the cows in order of production. Only one man was able to correctly place the Holsteins and two arranged the Guernseys in the right order. All agreed that the only accurate method of determining milk production was thru the use of milk scales and the Babcock test.

Following the judging contest the association members visited the experimental barn and discussed with S. I. Bechdel, dairy production research specialist, the various experimental dairy projects now in progress.—A. L. B.

Increased Production

THE following figures, taken from the records of forty-two cow testing associations in Pennsylvania, some of which have been in operation eleven years, indicate that continuous membership in cow testing associations is a great aid in increasing herd production.

Number of years in C. T. A.	Herd average pounds butterfat
1	259.6
2	270.9
3	272.2
4	272.8
5	281.8
6	301.6

Classification Lists Changed

THE National Dairy Show Classification Committee recently met with the representatives of the breed associations and made several improvements in the classification lists. The most notable of these is the addition of a class for proven sires. This is to consist of four advanced registry daughters of one bull, all of which must be two years old or over. It is not necessary for these to have been bred by the exhibitor, but all of them must have met the advanced registry requirements in order to be eligible for showing.

Other important changes made in the classification included the dropping of the advanced registry cow classes and the exhibitors' herd group. The committee felt that advanced registry cows might more correctly be given recognition in the open classes by paying an extra premium where the cow had an advanced registry record which exceeded the requirements by a definite percentage. The cow's record is to be printed in the dairy exposition catalog.

Class of Little Value Dropped

The class for exhibitors' herd was dropped, since the opinion was that this class had no special value except that it brought together a large number of attractive animals and thus made a spectacular show.

The get-of-sire class was changed so that part of the number of animals in the class must be females. Formerly the classes might have been filled with either four females or four bulls. The new requirement is that both sexes are to be represented and that not more than two bulls shall be included with the four animals shown as get-of-sire.

No changes were made in the breeders' young herd class except that the one bull under two years of age in the class need not be bred by the exhibitor. It was the recommendation of the committee that the premiums in the get-of-sire division be materially increased as compared with the individual or group classes. Special recognition was recommended for the breeders of the grand champion bull and cow, and the breeder of the sire that wins first prize in the get-of-sire group.—A. A. Borland.

Dairy Equipment

INTERESTING figures were secured in a dairy barn equipment survey carried on thru the cooperation of the testers in a number of Pennsylvania cow testing associations and C. R. Gearhart, dairy extension specialist at State College. The information was secured thru questionnaires sent to cow testers in a study that covered 200 representative dairy farms.

It was found that the average dairy farm in Pennsylvania contains 140 acres, on which are kept four horses and eighteen cows. The valuation of the dairy barns on these farms averaged $4420 each. Silos are evidently considered essential by dairymen, for 192 silos were found on 180 farms out of the total number included in the survey. Labor saving equipment was not found on these farms as frequently as were silos, altho 115 stables were equipped with modern stanchions, eighty-five had drinking bowls and fifty-eight included litter carriers. Twenty-five per cent, or fifty-three of the 200 dairymen who were visited, are using milking machines.—A. L. B.

QUESTION~ "What is it that makes the difference between profit and loss to the Dairyman?"

ANSWER~ "The Extra Cream that either Goes into the Cream can or into the skimmilk."

THERE is a question whether or not you are getting all the cream from your milk. You can answer it easily and without cost. Ask your De Laval Agent to bring out a new De Laval Separator and run your skim-milk through it. The new De Laval skims so clean that it will recover any butter-fat you have been losing. Then you can tell exactly whether you are losing or making money from your separator.

You may be surprised at the cream recovered. Hundreds have tried this plan and have found they were losing from $25 to $200 per year.

The new De Laval is the best separator ever made, since Dr. De Laval invented the first centrifugal separator 48 years ago. It has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is *guaranteed* to skim cleaner. It also runs easier with milk going through the bowl, and lasts longer.

Free Trial of Proved Swedish Abortion Treatment
Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used for years in the big dairy country Sweden, and has cleaned up whole districts over there literally rotting with abortion. Frank Halfman, Crown Point, Ind., writes: "Two years ago, I lost every calf from my herd of forty cows. All remedies failed until I used yours. I have never lost a calf since."

C. C. C. (Cow, Calf, Control) is guaranteed to absolutely stop abortion or the treatment cost is refunded. Write today for full details explaining our free trial offer.

Simply send your name and address without further obligation on your part to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

Buckwheat for Swine

Can you give me some idea of the feeding value of buckwheat as a feed for swine? Is it a good feed for horses?—R. J. W., Clearfield County, Pa.

Buckwheat has a feeding value that is lower than corn and barley but can be used in place of these feeds for fattening hogs. It is higher in fiber content than the corn and barley and about the same amount of fiber as oats.

The buckwheat when fed must be ground and balanced with a protein feed. It might also be mixed with corn or barley which will make the mixture more palatable than buckwheat alone. A mixture of equal parts buckwheat and corn or barley mixed with tankage or fish meal at the rate of one pound of the tankage or fish meal and ten pounds of the corn, barley and buckwheat will make a good fattening ration.

Buckwheat is not regarded as a good feed for horses. Horses do not relish it and there is likely to be trouble from digestive disturbances.

As a rule it is better to sell buckwheat as a cash crop, than to feed it to livestock.—W. H. Tomhave.

Early Pasture Crops

THE use of forage crops in swine production has become a universal practice in all parts of the United States. The problem in which the farmers are interested is how pasture can be had for swine during the entire growing season. This can only be done when definite plans are made in advance of the growing season. As a matter of fact it is necessary to plan for some of the crops nearly a year in advance.

In order that pasture crops for hogs can be had during the early part of the growing season it is necessary to seed some crop in the fall or have a piece of alfalfa, clover or permanent pasture that can be used. If a field of rye has been seeded in the fall this will make excellent pasture during the early spring months while other crops are being planted.

There are a large number of crops that can be used as pasture crops for swine. As a rule swine will relish any of the small grain or forage crops which makes it a simple matter to secure the type of pasture that is necessary.

In many cases it is a good plan to have both temporary and permanent pasture. The permanent pasture can be used early in the spring and any other time when there is a shortage of forage.

Early pasture as rye and wheat, is not so valuable because of the large amount of food nutrients supplied as in furnishing a succulent feed at the time when needed. These crops come on very quickly in the spring and are ready to be pastured before any other crop is ready. They help to extend the pasture season for swine and consequently help to cheapen the cost of pork production on the farm.

Three Outstanding Forage Crops

There are three outstanding forage crops for swine, namely: clover, alfalfa and rape. In all the tests that have been conducted these have always been near the top of the list as the most economical crops to use. They are all legumes and supply an abundance of protein which is very essential in swine production and one of the most expensive elements in livestock feeding.

On many farms all these crops are used together with some minor ones used largely for convenience when the major crops are not available. These legumes not only have the advantage of supplying an abundance of feed of high quality, but they are desirable because nearly all of them can be grown in most sections of the country and can be used during most of the growing season. A field of alfalfa or clover can be pastured as soon as the crop is from six to eight inches high. The alfalfa will furnish pasture for a long time if properly handled. It should not be pastured too severely at any time. It is desirable to have plenty of acreage so that any surplus may be cut for hay at the proper time. This will give the crop a new start. It is best to cut only part of the field at once unless some other pasture is available that can be used while the new growth is getting started.

A field of clover can be handled in very much the same manner, except that it is not as persistent a grower as alfalfa and can not be pastured as long as alfalfa. It is very popular, however, as a pasture crop and should be used more extensively.

Rape is one of the best known and desirable crops as forage for swine. It is a crop that must be seeded each year and is not permanent like alfalfa. It has some advantages that no other forage crop possesses.

Advantages of Rape

In the first place it can be grown successfully during any part of the growing season. It can be seeded early in the spring during the summer and early fall with good results. It is a quick growing crop, produces an abundance of feed and is not an expensive crop to produce because of the small amount of seed required per acre. It can be used alone or it can be grown in combination with other crops. When rape is relied upon for most of the forage it is a good practice to put in the first seeding as soon as the land can be worked in the spring.

It may be seeded alone but is frequently seeded with Canadian field peas and oats. This is a splendid combination but is quite expensive because of the cost of the field peas. When this combination is used it is usually seeded at the rate of one bushel peas, one bushel oats and five pounds of rape per acre. It is not a desirable practice to seed this combination at any time except early in the spring because the peas require cool weather and will not do well during the warm summer months. Successive seedings of rape at intervals of about four weeks will insure a liberal supply of forage all summer and early fall.

How Much Seed to Use

Rape when used alone should be seeded at the rate of six to eight pounds of seed per acre. It must be put on land that is in a good state of fertility for best results. The pigs should be put on the pasture when it is from eight to ten inches high.

When forage crops are used for growing swine it is well to place separate pastures for the young pigs and the mature sows. The pigs can remain with the sows up to weaning time when they should be put on a clean field. When handled in this way there is less danger from infestation of the pigs with stomach worms and other parasites.

Desirable pasture for all the hogs on the farm will reduce the cost of producing pork and also keep the swine herd in a much thriftier and healthier condition than when no pasture is used.—W. H. Tomhave.

Good Harness Needs Good Care

ACCORDING to a government survey taken to determine the cost of keeping farm horses, harness costs were reported as four and one-half per cent of the total, which included feed and bedding, chores, depreciation, interest, stabling, shoeing and miscellaneous. A deduction was made for the value of the manure.

When you consider that in every $100 total expense in keeping a horse, $4.50 is spent for harness, it's an item worth some attention. There are several ways to economize on harness: (1) Buy a harness that is made of good leather, (2) a harness that is well constructed as to stitching, quality of thread used in the sewing, quality of hardware, (3) a style that is suited to your particular work, and heavy enough to stand your hardest job without strain, (4) keep harness in a dry place, preferably enclosed from stable fumes, (5) occasionally wash and oil, (6) when repairs are necessary, make them promptly and do a good job.

Once you have purchased good harness, the main thing is to take good care of it. When the oil dries out of harness, and the rain and dust penetrate the leather, it quickly deteriorates. Investigation shows that there is a wide degree of difference in the number of years service that farmers get from harness. This depends on the quality, the amount and kind of work done and the care given the harness.

If you can make harness last twice as long by taking care of it, it means that your harness costs will be cut in half. It should also be remembered that it's not only the cost of the harness and repairs, but the time lost when making repairs, that counts. When a harness gets too bad, it's cheaper to buy new than to make frequent and costly repairs and run the risk of accident or delays during a rush season, when time is money.

The hog is of interest not merely from the cold, economical viewpoint, but as a personality. Tho calmly independent, he is always approachable; he does not curry favor; he is never forward; he lives and lets live; he is thrifty but he believes there is a time for rest and leisure. — Dr. Rudolph Clement.

Asparagus for Phila.

(Continued from page 9)

been retarded by cold weather. The same holds true in New Jersey.

All these conditions will have an affect on the market. The eastern grower has an advantage over the western asparagus producers. The farmer in California must spend about $1.44 to express a crate of asparagus to Philadelphia and around 78c by freight. Nearby farmers do not have this expense and also have the advantage of being able to get their grass on the market more promptly.

If the eastern season opens later than usual, it may be that California will have fairly well cleaned up her crop and eastern growers will profit by this situation. But on the other hand the reported increases in acreage in the West and other conditions may upset this supposition.—W. R. Whitacre.

Riverside Tires
OVERSIZE CORDS BALLOONS & TUBES

$11.25 30 x 3½ OVERSIZE CORDS FOR FORDS
All sizes at equally low prices

A definite mileage Guarantee Backed by a 54 year old Company

If you *could* buy a better tire value, if you *could* get extra quality for an extra price—that would be a different thing.

But when we put a 54 year old guarantee back of Riverside tires, when we guarantee them to give you the last possible yard of mileage, paying an extra price is only extravagance.

When we guarantee our oversize cords for 12,000 miles—our balloons for 10,000 miles—made with new live rubber, designed to prevent skidding—what better tire value can you get at a higher price?

If you pay one-third more, what do you get for the extra money? You get no longer mileage, no better service, no better guarantee of satisfaction. So why pay more?

Why Ward's Prices are Low

We are the largest retailers of tires in the world. We buy our own live rubber, millions of dollars' worth, and pay cash—when rubber is low in price.

Riversides are made in our own molds, under our own supervision. We see that super-quality is built into the tire. And yet our one-profit method of selling by mail saves you a full one-third, that otherwise would go as profit and cost of selling.

Easter—The Season of Hope

How Can Country Folk Be Pessimistic in Spring?

EASTER has always seemed to me to be a season especially fitted for the enjoyment and understanding of country folk.

With the physical resurrection by which we are surrounded at Easter, how can we fail to believe in the spiritual resurrection? With the necessity to start all of our farm undertakings anew at this season, how can we fail to hope?

To me there is something especially happy and cheering about the Easter season. The newly washed face of the earth. Flowering boughs and tender grass after the weary weeks of cold and snow. Getting up in the morning is no longer a dread when we can hear the robins calling from the orchard trees. I am almost as enthusiastic as the children over the new baby-calves and pigs and lambs. I have always felt that the love and care of these little animals is a big part of the education of farm children. With mother-cat curled in her basket singing to her fluffy kittens, with a clumsy puppy sprawling under foot, how can Easter be other than happy for the little people so blest?

Hint for the Easter Bride

BEFORE I was married I purchased enough curtain material off the same bolt to make curtains for the dining room, two bedrooms and hall, totalling seven pairs. I made them all alike, and it has proved to be great wisdom. When one curtain wore out I could match the better one with a good curtain from another pair. After nine years I now have one good pair in use in the bathroom. Curtains at least similar in pattern and make-up always give the house an artistic appearance from outside as well as in.—Mrs. A. Ward, Pa.

Forget Disappointments and Plan

I can't help singing at Eastertime. I can't help liking to color eggs. Even as a small child I liked the talk of my elders at this season; mother planning the new curtains she meant to have after housecleaning; father, forgetting last year's disappointments, making plans for the new crops.

"It is all very well to sing if you feel like it," a friend recently said to me. "As for myself, I do not feel like singing. It is going to take more than a flash of uncertain sunshine and a robin chirping to make me believe I am fortunate or happy or satisfied with life as I find it!

"I've just been thru a terrible winter. We all had grippe and our house is cold. We were worried about money; finally we did manage the taxes and interest, but the farm payment and the doctor's bills are beyond us, yet.

"No one need tell me a farmer lives better than other people. For months past, while I have been struggling to make wilted cabbage and shrunken beets tempt finicky appetites, my sister in town has had delicious lettuce and rhubarb and grapefruit at her command.

"We're not going to church Easter, either. Linda wants a new hat and a rose-colored dress—she might as well ask for the moon! I don't believe you realize what it means to be situated like this."

Isn't that human nature? To feel, when the going is a bit rough, that no one else ever found it quite so hard?

I tried to tell her I had lived in a century-old house and nursed an ailing family. I had invited gray hairs to my head figuring about those troublesome taxes and doctor's bills and payments on the farm. My new clothes were more often a question of necessity than of style or season.

"Then, what sense is there in all this hope?" she demanded. "There are thousands of other country women just like us. It makes my heart ache. And most of all for the young ones and for girls like Linda."

High Hope for Younger Generation

I am sure my sympathy—born of experience—is just as strong and true as that of my disheartened friend. But I cannot take her pessimistic view. I can't help seeing hope, especially for the younger generation.

If they will both seize the opportunities that are theirs. Linda need not wear the unlovely clothes her mother has had to wear. She need not serve the colorless meals. She need not starve her mind for lack of interesting and constructive thoughts.

Much better than the money with which to buy the coveted new hat and rose-colored dress is a practical and working knowledge of how to make them for herself. And such knowledge is now given thru the junior classes of the home demonstration agents, the councils of the Camp Fire Girls and the new home information centers of the Eastern States League.

I know girls, still in grammar school, who make charming gowns for themselves. A little neighbor made a practical and pretty layette for the advent of a baby brother. Another girl about given up as an incorrigible has become a happy and industrious young woman since her local sewing teacher discovered that she has a positive genius for designing and sewing.

One young member of a cooking class is proud of her local reputation for cake-making. Another became fascinated with canning and gardening. She borrowed a pressure canner from her demonstration agent and converted her family by her delicious winter menus—luscious greens, string-beans, corn, and such tomatoes as they never dreamed could come out of a can!

The Clubs for Boys and Girls

Boys and girls both can work in the garden, pig, poultry, and calf clubs. They learn the wonderful lesson of team-work. They feel the drive of competition. They earn rewards and feel the urge to go a little higher.

But all this does not come merely for the asking. I know busy mothers who find time to take lessons themselves that they may organize classes so that their own children may take this work.

Surely with these chances for the children within reach, we cannot but feel that Easter is a season of hope and new opportunity.—Alice Margaret Ashton, N. Y.

Molasses Pudding

2½ cupfuls flour
1 teaspoon soda
½ teaspoon salt
½ teaspoon cinnamon
½ teaspoon nutmeg
1 cup chopped suet or 2-3 cup shortening
1 cup chopped raisins
1 cup sweet milk
1 cup baking molasses

Sift soda, salt and spices with the flour, then rub in the suet or shortening. Add the raisins. Combine milk with molasses, add it to the dry mixture and stir thoroly. Fill buttered pudding molds three-quarters full, and steam for three hours. Serve with foamy sauce. — Betsy Ford, Md.

What to Serve the Children

MANY women, famous among their adult friends for the tables they set, find themselves at a loss when called upon to prepare a menu for a children's party. You must plan dishes that they will like and that will like them.

To balance any meal properly, you should have more than sugars and starches. You must not be content with the protein of meat and the carbohydrates of bread and potatoes. You need acids, minerals, salts and vitamins.

In other words, you need fresh fruits and green vegetables. For instance, serve a light celery soup or tomato bouillon; have a fruit salad, properly sweetened; stick to the simple meats and vegetables; serve a light fruit pudding, float, souffle or ice cream. With these as balancers, the children should be able to digest the nuts and sweets that always seem to creep into their menus on special occasions.

A salad that children will always enjoy may be made from two apples two bananas and two oranges cut into fine bits and placed in a glass dish together with six marshmallows cut into small pieces with a pair of scissors. Sprinkle this with sugar, add several tablespoons of whipped cream and mix thoroly. Cover salad plates with crisp lettuce leaves. Place a helping of the fruit upon each nest of leaves and on top place a little portion of some jelly—apple, quince, grape, or red currant will do.

This will always please the young folks and a few of them may make their first attempt at the healthful lettuce leaf because it is covered with such a delicious mixture.—Betty Barclay, Pa.

Packing Breakables

WHEN packing glass or fine china, use excelsior or straw that has been slightly dampened. The water will cause both to swell and this swelling automatically fills up the crevices, thus wedging in the packing between such breakable articles much better than if done by hand. This is the method employed by professional packers.—Addie Folsom.

Lilies Easter Morning

EASTER morning without any lilies in our homes or to send to our friends is for all the world like a day without sunshine—drab, dreary and spiritless.

From the wide variety of lilies I chose Lilium Regale, or Regal Lily, last fall, with its jasmine-scented beauty. As an experiment I grew this specimen plant, in a pot of ordinary garden soil, in a south bay window, to the height of two feet and an inch. Tall, upright and sturdy it held aloft two handsome blossoms that measured almost eight inches across, without a trace of weakness. It will remain safely outside all winter long and when grown thus, its blossoming season commences in June, with the majority of its flowers in July.

Easter week its buds, big, choice and well matured, began unfolding.

I planted this particular bulb on December 13, and Easter week the marvelous blossoms began unfolding. Easter morning they were superb.

If skeptical of its rare loveliness bury a few bulbs in some of your earth next fall, and, barring accidents, next Easter morning you will be recompensed with a "veritable glimpse of the promised land."

From Wilds of Northwestern China

Lilium Regale or Myriophyllum is a rather lately introduced product to the large family of lilies known in America. Its wondrous beauty was recently discovered, collected and brought to us from the wilds of northwestern China. It is so easily forced that any amateur may revel in its delightful unfolding in her own home.

The blossoms are white, with a slight suffusing of faint pink; its trumpet being painted part way up with a soft glow of canary yellow. In perfume, Lilium Regale distinguishes itself from other types, in that its exquisite perfume is not oppressive—just sweetly refreshing with the breath of jasmine.—Gertrude Shockey, Ohio.

Prize Winning Hints

I AM a farmer's wife and a firm believer in mending. I really enjoy it. I demand good strong materials to do it with, for I like it to remain "done." Husband's workday stockings are mended by crocheting the holes shut with knitting cotton.

In mending the children's stockings I cut a circular patch of new mercerized poplin, baste it into position, and then buttonhole it fast to the stocking using silkateen. I also use silkateen for darning small holes for there is no wear out to it.—Mrs. Thomas G. Cooke, Pa.

A SUPERIOR RUG OF GENUINE CORK LINOLEUM

"... now it's the prettiest room in the house!

"IT was depressing just to look at that old shabby bedroom. Old fashioned starched lace curtains, yellow pine woodwork, faded wallpaper, and the matting gone to seed! It was discouraging to try to clean it. In such surroundings, mother's dear old walnut pieces looked *so* unhappy!

"Now it's really the prettiest room in the house, and I did it all at surprisingly little cost. I selected pale yellow for the walls and did the woodwork over in ivory white—I did the painting myself. Cretonne curtains with a dark blue figure seemed to give just the touch of color needed for the walls.

"Then the floor—this lovely smooth-surface rug, Pattern No. 887, came to me as a happy inspiration. It's an Armstrong Rug of real linoleum. And it's so easy to clean! I just run over it with a damp cloth or mop, and it's clean! Inexpensive, too. I saved almost enough to pay for all the other improvements in the room."

Perhaps you, too, have a room—bedroom, living-room, dining-room, or kitchen—that can be made attractive and livable by the addition of one of these inexpensive rugs.

Be sure you get an Armstrong Rug of genuine cork linoleum, a naturally superior material. Softer, more flexible and springy, it will outlast any other smooth-surface rug. If it hasn't a burlap back, it isn't linoleum.

Armstrong's genuine cork linoleum rugs are made in the larger room sizes, 12 ft. x 12 ft., and 12 ft. x 15 ft., as well as the usual smaller room sizes.

"RUGS OF PRACTICAL BEAUTY"—*This attractive booklet will help you select a rug to harmonize with your furnishings. A score of beautiful patterns, all illustrated in full color. Send for it today. It is free. Address* Armstrong Cork Company, *Linoleum Division,* 1004 Jackson Street, Lancaster, Pa.

INTENTIONAL SECOND EXPOSURE

JELL-O

America's most famous dessert

BACK in those days when flourished the red plush furniture, the marble top tables, antimacassars and bric-a-brac of Mid-victorian times, preparing a gelatin dessert required much skill and thought. Fruit flavoring, sugar and other ingredients, in proper quantity, had to be added, and then the resulting dessert often was disappointing.

But in these days of modern efficiency making a Jell-O dessert is a pleasure. Jell-O is so easy to prepare, that by following the simple directions on each package it is possible to make a variety of desserts and salads. Our recipe book contains many economical recipes. *Write us for it.*

"...and Jane, dear...Jack just raved about my teeth."

"I just smiled my prettiest smile... and let him rave. I could have said 'Of course I have beautiful teeth... I've used Colgate's all my life'. But I didn't want Jack to think I was a living advertisement for Colgate's tooth paste."

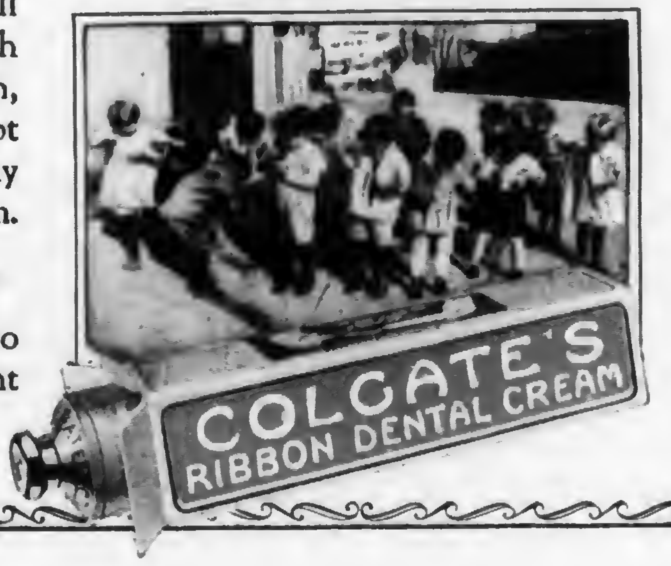
* * * * *

Beautiful teeth glisten gloriously. They compel the admiration of all who see them. And there is health as well as beauty in gleaming teeth, for when they are scrupulously kept clean, germs and poisons of decay can't lurk and breed around them.

Remove Those Causes of Decay

Save yourself the embarrassment so often caused by poor teeth. Fight the germs of tooth decay. Colgate's will keep your teeth scrupulously clean. It reaches all the hard-to-get-at places between the teeth and around the edges of the gums, and so *removes causes* of tooth decay. It is the dependable tooth paste for you to use.

Here are children in Passaic, N. J., using Colgate's to fight tooth decay. Colgate co-operates with thousands of school officials and health authorities in teaching dental hygiene.



The principal ingredients of Colgate's are mild soap and fine chalk, the two things that dental authorities say a safe dental cream should contain. The combined action of these ingredients washes, polishes and protects the delicate enamel of your teeth.

Use Colgate's Regularly

Just remember that beautiful, healthy teeth are more a matter of good care than of good luck. Use Colgate's after meals and at bedtime. It will keep your teeth clean and gloriously attractive.

And you'll like its taste... even children love to use it regularly.

The
man who
"couldn't smoke
a pipe"
is now
a P. A. fan!

HOW come this conversation about you "never *could* smoke a pipe," how come? Must have run across some tobacco that didn't set well with your smoke-appetite. Anyway, it wasn't good old P. A.

Just forget any notion you ever had about you "can't smoke a pipe." Write it on the ice! Because—you *can* if it's packed with Prince Albert. And how! You'll go to it from early morning till you crawl between the sheets at night.

Yes, indeed! Prince Albert smokes so cool and sweet and fragrant, you'll feel like the fellow who has suddenly come into money. Sitting pretty and no mistake. Joy by the bowlful. And get this: P. A. can't nip your tongue or parch your throat. The Prince Albert process fixes that for all time!

So . . . get yourself a jimmy-pipe and a tidy red tin of Prince Albert today. Connect up with a match. Lean back and watch the clouds roll by.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

The Tam o'Shanter Is Popular

Make One of Your Own—It Won't Be Difficult

THE home milliner will be glad to know that the spring hats are extremely simple to make, attractive in appearance, inexpensive, and a large number of them tam o'shanter styles.

Silk bengaline, frost crepe, slipper satin, and taffeta are the materials most favored, either plain or in combination with hemp straw. Many of the hats are made with sectional crown from patterns similar to the felt hat section. This allows for the use of old material which has been well cleaned and the colors brightened. Since horse-hair hats are to be popular, it would be wise to get out your old one and remodel it.

Buckram frames may be bought in tam o'shanter styles, and are easily covered with the patterns I shall describe. It is possible to make up many styles without the buckram frame.

Materials for Foundation

The materials necessary for making a foundation are millinery wire (perhaps from some discarded hat), crinoline, chiffonette, and strong thread.

Cut the pieces of wire the exact measure of your headsize. If you wish a slight brim, make the second wire two inches longer than the first. Join the ends of the wires, using millinery clips. Cut a piece of crinoline on the bias, five inches wide and two inches longer than the headsize measure. Make a bias piecing allowing nearly two inches for a lap. Take your wire and, holding it close to the edge, sew it with the lock stitch, which is an overcasting stitch where the thread is left loose and the needle brought back and thru the loop and pulled up. This forms a knot which holds the wire to the crinoline.

Take the other wire and sew it on with small overcasting stitches, one inch down from the first wire, on the under side. Fold over the crinoline making the crease on the second wire. This is the foundation ready to put on either of the patterns described. When the second wire is longer than the first sew up the crinoline according to the head size measure, put on the first wire, and stretch the crinoline to fit the lower wire. If the hat material is light weight, cover the edge of the crinoline fold with a stretched bias fold.

Becoming to Matron and Maid

Tam o'shanters become youthful faces, but are becoming to matrons also if made up with narrow brims. These brims can be purchased at millinery shops, and are covered with a stretched bias. Be sure to cut your bias wide enough to allow for an inch to turn up on the outside and one inside. When using the foundation, cut an interlining of the chiffonette exactly like the pattern. This gives body to the hat and yet preserves the soft look.

Patterns using the sectional crown require one-half yard of yard-wide material. The genuine tam style requires three-fourths yard.

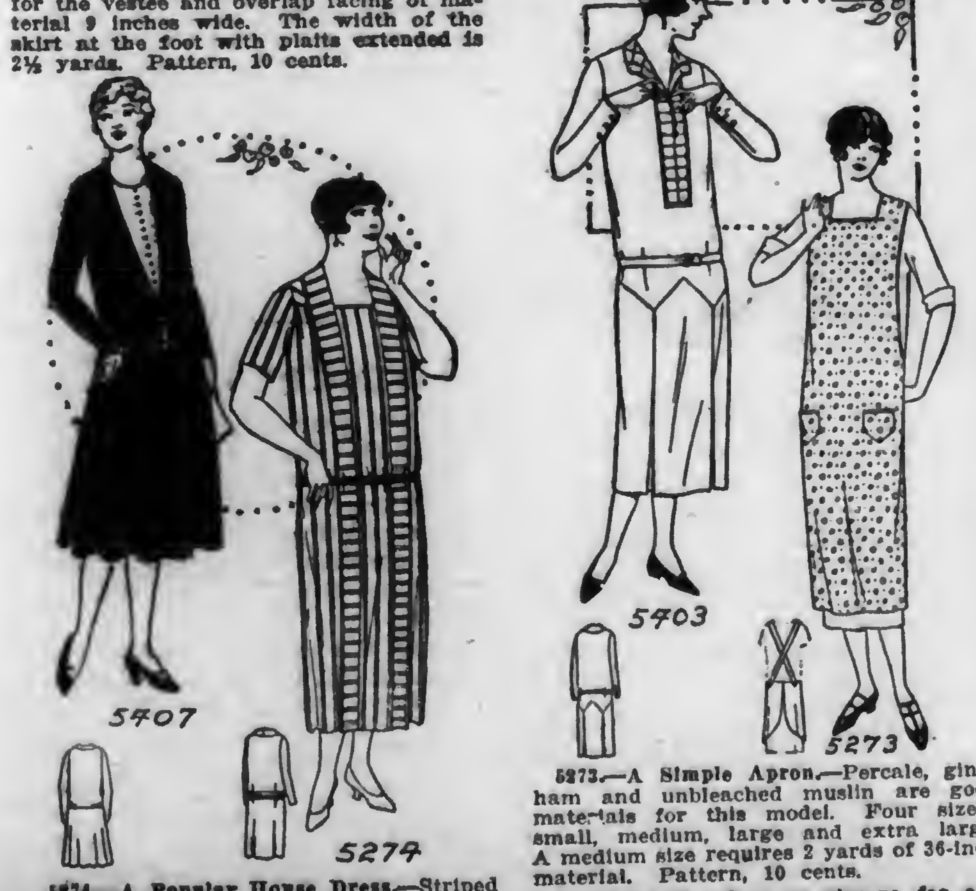
A bright pin, or bit of ribbon, or straw fancy is the only trimming found on these silk hats.—Edith R. Dilts, N. J.

Editor's Note:—Mrs. Dilts has left me patterns of the two styles described. We shall call the sectional one Pattern I. The tam crown we shall call Pattern II. If you desire one of these patterns, send a large envelope—self addressed,—to Editor of Home Page, care of Pennsylvania Farmer, 261 S. Third St., Phila., Pa. I also will give you addresses of reliable dealers in milliner's supplies.

Attractive Models for Spring

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5407.—Charming Frock.—Taffeta was selected for this model with crepe satin for trimming. One could use kasha, crepe or crepe de chine. Three sizes: 16, 18 and 20 years. An 18-year size requires 4 yards of 40-inch material, and ½ yard for the vestee and overlap facing of material 9 inches wide. The width of the skirt at the foot with plaits extended is 2½ yards. Pattern, 10 cents.

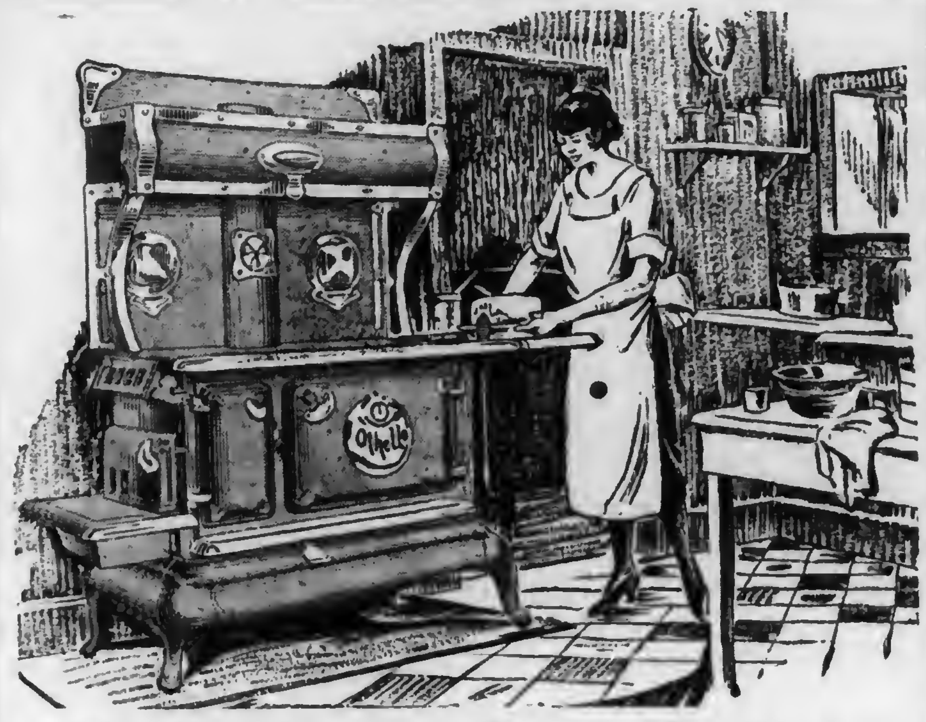


5274.—A Popular House Dress.—Striped seersucker or dotted percale would be nice for this design. The sleeve may be short or in wrist length. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 37-inch size requires 4⅝ yards of 36-inch material, if made with long sleeves. With short sleeves 4⅜ yards will be required. Pattern, 10 cents.

5403.—A Stylish Dress.—Wool crepe and plaid are here combined. This design is also good for taffeta, broadcloth or jersey weaves. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 yards of plain and ⅝ yard of plaid material 54 inches wide if made as illustrated. The width of the dress at the lower edge with plaits extended is 2⅛ yards. Pattern, 10 cents.

5273.—A Simple Apron.—Percale, gingham and unbleached muslin are good materials for this model. Four sizes: small, medium, large and extra large. A medium size requires 2 yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.



The Most Important Room—The Kitchen

It is here that the housewife spends most of her working day. It should be the best equipped and one of the most pleasant rooms in the house.

With a beautiful OTHELLO enameled range, the kitchen will be attractive as well as convenient.

Then she will enjoy cooking and baking.

The OTHELLO range, richly enameled, with removable nickel trimmings, and with gun metal top eliminates forever the need of stove polish. No more tedious hours spent on "blacking"—Simply wash with a damp cloth. It is as easily cleaned as a china dish and will save any housewife at least 52 hours of work every year.

The enamel will not discolor; the nickel will not tarnish; and the gun metal top will not rust or turn gray.

The OTHELLO is moderately priced—will last for years. A dealer near you will gladly show you the OTHELLO range or write to us for illustrated catalog showing many styles.

The man who "couldn't smoke a pipe" is now a P. A. fan!

How come this conversation about you "never *could* smoke a pipe," how come? Must have run across some tobacco that didn't set well with your smoke-appetite. Anyway, it wasn't good old P. A.

Just forget any notion you ever had about you "can't smoke a pipe." Write it on the ice! Because—you *can* if it's packed with Prince Albert. And how! You'll go to it from early morning till you crawl between the sheets at night.

Yes, indeed! Prince Albert smokes so cool and sweet and fragrant, you'll feel like the fellow who has suddenly come into money. Sitting pretty and no mistake. Joy by the bowlful. And get this: P. A. can't nip your tongue or parch your throat. The Prince Albert process fixes that for all time!

So . . . get yourself a jimmy-pipe and a tidy red tin of Prince Albert today. Connect up with a match. Lean back and watch the clouds roll by.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

© 1926, R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

The Tam o'Shanter Is Popular

Make One of Your Own—It Won't Be Difficult

THE home milliner will be glad to know that the spring hats are extremely simple to make, attractive in appearance, inexpensive, and a large number of them tam o'shanter styles.

Silk bengaline, frost crepe, slipper satin, and taffeta are the materials most favored, either plain or in combination with hemp straw. Many of the hats are made with sectional crown from patterns similar to the felt hat section. This allows for the use of old material which has been well cleaned and the colors brightened. Since horse-hair hats are to be popular, it would be wise to get out your old one and remodel it.

Buckram frames may be bought in tam o'shanter styles, and are easily covered with the patterns I shall describe. It is possible to make up many styles without the buckram frame.

Materials for Foundation

The materials necessary for making a foundation are millinery wire (perhaps from some discarded hat), crinoline, chiffonette, and strong thread.

Cut the pieces of wire the exact measure of your headsize. If you wish a slight brim, make the second wire two inches longer than the first. Join the ends of the wires, using millinery clips. Cut a piece of crinoline on the bias, five inches wide and two inches longer than the headsize measure. Make a bias piecing allowing nearly two inches for a lap. Take your wire and, holding it close to the edge, sew it with the lock stitch, which is an overcasting stitch where the thread is left loose and the needle brought back and thru the loop and pulled up. This forms a knot which holds the wire to the crinoline.

Take the other wire and sew it on with small overcasting stitches, one inch down from the first wire, on the under side. Fold over the crinoline making the crease on the second wire. This is the foundation ready to put on either of the patterns described. When the second wire is longer than the first sew up the crinoline according to the head size measure, put on the first wire, and stretch the crinoline to fit the lower wire. If the hat material is light weight, cover the edge of the crinoline fold with a stretched bias fold.

Becoming to Matron and Maid

Tam o'shanters become youthful faces, but are becoming to matrons also if made up with narrow brims. These brims can be purchased at millinery shops, and are covered with a stretched bias. Be sure to cut your bias wide enough to allow for an inch to turn up on the outside and one inside. When using the foundation, cut an interlining of the chiffonette exactly like the pattern. This gives body to the hat and yet preserves the soft look.

Patterns using the sectional crown require one-half yard of yard-wide material. The genuine tam style requires three-fourths yard.

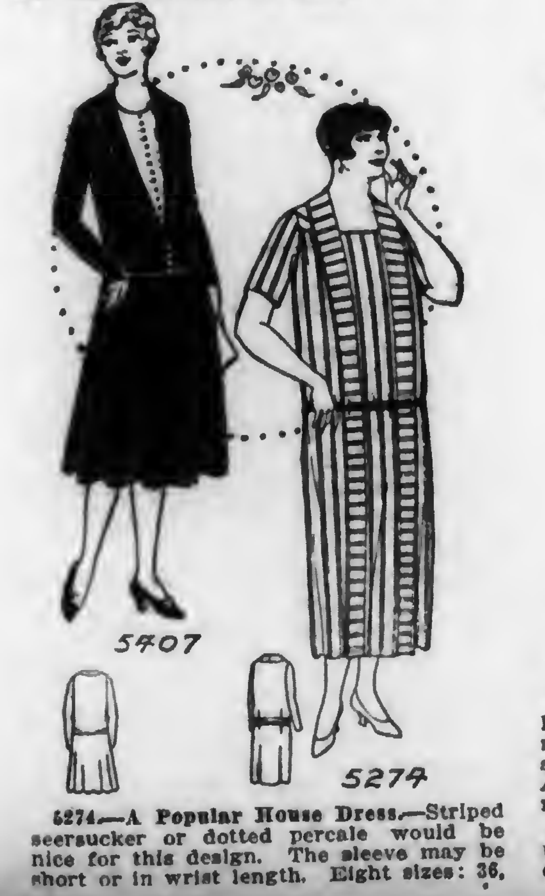
A bright pin, or bit of ribbon, or straw fancy is the only trimming found on these silk hats.—Edith R. Dilts, N. J.

Editor's Note:—Mrs. Dilts has left me patterns of the two styles described. We shall call the sectional one Pattern I. The tam crown we shall call Pattern II. If you desire one of these patterns, send a large envelope—self addressed,—to Editor of Home Page, care of Pennsylvania Farmer, 261 S. Third St., Phila., Pa. I also will give you addresses of reliable dealers in milliner's supplies.

Attractive Models for Spring

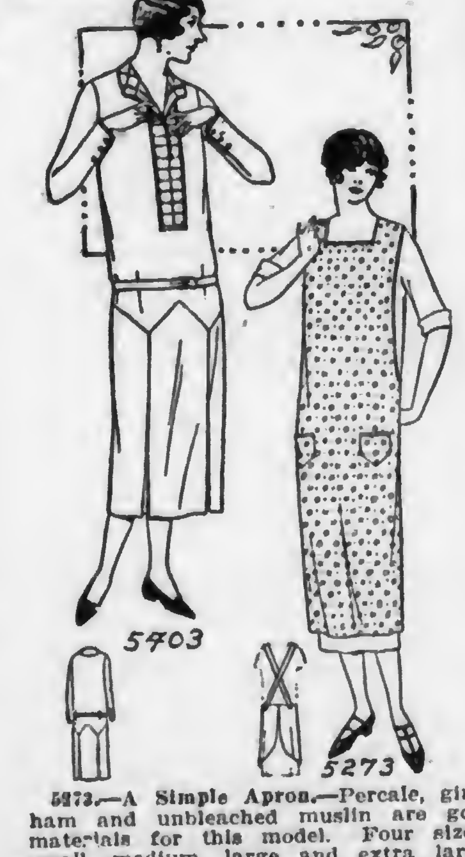
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5407.—Charming Frock.—Taffeta was selected for this model with crepe satin for trimming. One could use kasha, crepe or crepe de chine. Three sizes: 16, 18 and 20 years. An 18-year size requires 4 yards of 40-inch material, and ½ yard for the vestee and overlap facing of material 9 inches wide. The width of the skirt at the foot with plaits extended is 2½ yards. Pattern, 10 cents.



5274.—A Popular House Dress.—Striped seersucker or dotted percale would be nice for this design. The sleeve may be short or in wrist length. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 37-inch size requires 4⅝ yards of 36-inch material, if made with long sleeves. With short sleeves 4⅜ yards will be required. Pattern, 10 cents.

5403.—A Stylish Dress.—Wool crepe and plaid are here combined. This design is also good for taffeta, broadcloth or jersey weaves. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 yards of plain and ⅝ yard of plaid material 54 inches wide if made as illustrated. The width of the dress at the lower edge with plaits extended is 2⅛ yards. Pattern, 10 cents.



5273.—A Simple Apron.—Percale, gingham and unbleached muslin are good materials for this model. Four sizes: small, medium, large and extra large. A medium size requires 2 yards of 36-inch material. Pattern, 10 cents.

Avoid Monotony in the Meals

It's a Strange Family That Doesn't Relish Variety

THIS is a busy world, and most of us are inclined to follow the line of least resistance. It is often easier to get a very commonplace meal than to plan something which is a trifle different and a surprise in some way. The housewife or home-maker often pleads the excuse that she has so much to do, or is of necessity obliged to practice economy, so that a wide variety of foods is not practical.

As a rule, these two excuses are without real foundation, for it takes no more time to get meals which are different, than to prepare the same things day after day, week after week, and month after month. It is merely a case of mixing a few brains along with the ingredients, and of doing a little planning in advance. It costs no more to serve a variety of food than the same things endlessly over and over. In order to have variety, we do not need to purchase out-of-season materials nor unnecessarily high-priced ones. A familiarity with foods and food combinations will make it possible to plan delicious and simple combinations that are different.

"Eating Out"

There is a reason why so many families welcome every opportunity to "eat out." There is always something pathetic about this, for home should be the dearest place in the world, filled with peace, joy and happiness.

One home maker declares that she found herself getting into the rut of making a sponge cake or a certain kind of pie or pudding over and over again. And then she would drop that and take up another recipe or set of recipes and use those, until every one of the family got tired of them.

Now she uses a different plan and does not put the same kind of cake, pie, or pudding before her family except after a considerable period of time has passed. She reasons that a fresh sponge cake with whipped cream and a dish of fresh or canned raspberries may make a delicious dessert today, but that is no reason why they need be offered again and again.

In order to use supplies which are on hand in different ways, she studies new recipes, cookery suggestions from every source, and in addition to that, develops her own ingenuity by combinations which her good judgment tells her will be acceptable.

For example, the other day, she had a fine platter of fried oysters. A cupful of these were held back and not cooked. The next evening part of the dinner menu consisted of a new and delicious dish, which was relished by everyone. It was richly creamed codfish with the cupful of oysters cooked in the cream sauce at the last moment. There were a couple of tablespoons of green peas left from the previous meal. These were drained of their juice and the green peas and a few tiny strips of sweet pimento stirred into the sauce, fish and oyster mixture. The whole was served in hot patty shells, but could have been served on rounds of buttered toast.

The codfish had been freshened until it was a toothsome tid-bit, and with baked potatoes, this economical food met with a warm reception. In the same way, the wise woman varies her different meals. She is especially particular to have a satisfactory breakfast, for that strikes the keynote of the day.—Emma Gary Wallace, N. Y.

Spinach Balls

SPINACH balls for beef or chicken broth: Cook one tablespoon flour in one tablespoon butter, and add one tablespoon cream and salt and pepper to taste. Remove from fire and stir in one cupful cooked spinach chopped fine. Add one well beaten egg, and beat the mixture thoroly. Drop by spoonfuls into hot broth, and cook like dumplings, twelve minutes.—L. M. Thornton.

Our Circulating Library

And Now Another Book Is Added to Our Sheives

RECENT letters from some of our readers lead us to the belief that the idea of a circulating library is not understood by all. Such a library is one constantly on the move—always circulating. A book moves from our office on to you; you enjoy it and send it back to us; we send it out again to whomever is next on the waiting list; and so on and on.

We can give you better service in the future for we have bought two and three more copies of each volume announced on the page February 20th. We urge you to cooperate with us in promptly returning each book you borrow within the time limit.

For Better Health

One of the housewife's daily questions is: "What shall I prepare for dinner?" Simple eating would change our nation's health. If America is to enjoy better health, we individual folks, farm folks included, must have better eating habits. While father and the boys study better feeding methods for the cows, chickens and swine, let the girls with their mothers acquaint themselves with the essentials which keep human bodies in health.

We want to help you and are providing you with a book in our library by Mary Swartz Rose, of Columbia University's Department of Nutrition. In this book, Feeding the Family, you will find discussions on the proper food for men and women, be they fat or thin, active or indolent, healthy or ill. There are chapters devoted to the proper food for children of all ages, for their rations are not the same as their father's when health is considered. You will want to study this book. It is loaned to you for the asking, provided you send fifteen cents in stamps to cover mailing and insurance to Home Page Library, care of Pennsylvania Farmer, 261 South Third St., Phila., Pa.—Gertrude S. Stewart, N. J.

Decorating Easter Eggs

LAST year my children enjoyed their Easter eggs more than ever before, and I did not have the usual trouble with them eating up the eggs all at once. The secret is to make them more interesting then children will prefer to play with them.

Boil the eggs ten minutes, then cool slightly. Outline animal sketches on the clear shells with pencil. Then, using a pointed brush, paint over the outline, using egg dye to moisten the brush. When bunny was painted, I added crisp paper ears, fastening them to the shell with good glue. The pig had a curly tail made of yarn.—Mrs. Charles Wynick, Pa.

A Lawn in the Making

THREE years ago I purchased a fine fifty-acre farm near Jamestown, New York. I had an interesting experience as I had left a college in Kentucky where I held a position. I had owned a beautiful home in a city, and had made the lawn a thing of beauty. When I came to this farm, I found the lawn in a deplorable condition. There were eight beautiful maple trees along the road but the lawn had been pastured, as there was a prolific growth of grass.

The first thing I did was to get all the hay or grass off as best I could, then taking the two-horse disc, cut the sward running the disc in every direction. It was cut up until it looked like a freshly plowed tract of ground. Then I put on the section harrow, harrowed it every way, making it as level as it could be. This process pulled and cut up a lot of grass. Then I started in with the hand rake. This required days of hard work. Every grass root was pulled out and when I had finished I sowed lawn grass, sowed it good and thick.

Will Apply Manure Occasionally

I had some splendid pulverized manure at the barn and put a lot of this on the ground and kept raking until it all disappeared. It is now a beautiful lawn and I have no trouble cutting it with the lawn mower. From time to time I shall put on some more manure, and several loads of rich soil, raking this in. The time to do this is in the fall. The soil will fill up all small depressions.

Once there was a beautiful lawn in England, and a stranger passed by and asked, "How many years does it take to make a lawn like that?"

The gardener replied: "This has been in the making 500 years."

My lawn attracts great attention and it is only three years old. In the lawn I have a fine snowball bush, and next the house a row of fine roses. Also there are three round beds in which flowers are set out every year.—R. A. B., Chautauqua County, N. Y.

Scholarship Offered

THE Baltimore & Ohio Railroad has announced that it will award a $100 scholarship to the Pennsylvania boy or girl who most efficiently completes his or her project in agricultural club work.

The club member may enter any type of club work recognized and supervised by the Pennsylvania State College of Agricultural Extension Service, such as corn clubs, potato clubs, sewing clubs, canning clubs, calf clubs, pig clubs, etc.

Alternatives for Use

The winner of the scholarship will have the alternative of using the scholarship for educational purposes at any recognized college or university in the state or in defraying the expense of an educational trip to the Boys and Girls Fifth Annual Club Congress and International Livestock Exposition at Chicago, next December.

This railroad has awarded fifty scholarships to date in its territory. Thirty-three of the winners chose to use the money for educational purposes, while seventeen chose the educational trip. Pennsylvania farm boys and girls who have won Baltimore & Ohio scholarships to date are:

Emaline Passmore, Chester County; John A. Benson, Lawrence County; Donald M. Snook, Chester County; Carl Kline, Cambria County; Oscar W. Keim, Somerset County.

"They're fightin' 'cause Bill said Alf's wife wuz cockeyed."

"But Alf's a bachelor, ain't he?"

"Yeh, but the principle is wot made Alf wild."

MORE PROFIT

less hired labor

SUPER-ZINCED FENCES actually reduce your farm labor costs. They permit modern, diversified farming, more live stock, easier marketing, more certain profits and more fertile soil. They add much more than their cost, to the value of any farm.

Hinge-Joint Columbia Super-Zinced Fence

is designed to give the greatest service per dollar invested. Our special formula open health steel has unusual strength, and an affinity for the heavy zinc coating which insures great durability. The Columbia Hinge-Joint construction has proven its merit under the tests of severe service.

Guaranteed

All of our fences are Super-Zinced, that is, armored against rust by the heaviest coating of zinc that can be successfully applied to wire, and are guaranteed unexcelled in quality and durability. Our brand on fences, gates, barbed wire, posts and wire nails is your assurance of uniform quality and durability. Write for booklets and name of agent near you.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—Cousin Ruth, I do wish you could have been here with us when the snow was so deep and everything was so pretty and white. After there was a crust on the snow we had a good time sliding down hill, but there is not very much snow any more.

I will be glad when spring is here for I like to see the birds and flowers. A little wren still makes its nest outside our kitchen window in a grape vine.—Esther Stone, Perry County, Pa.

Dear Cousin Ruth and Forum Friends:—I make the fire for my teacher and she pays me twenty cents a morning. I have a pet dog named Sport. I am very fond of him. He goes to school with me sometimes.

I have traps set. Got two skunks and one weasel. I look after my traps after school hours.

I like to skate very much. There is a pond near my home where I go skating.—Woodrow Maust, twelve, Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm of 183 acres. I am real busy during the summer helping in the fields. I must take the place of a hired man so you see I must work pretty hard.

We have two little riding horses which I enjoy riding. I go for the cows on a horse. I am learning to ride real well so I'll soon be able to ride them as fast as they can go. My father is a good rider and I am taking after him. Did you ever ride horses, Cousin Ruth?—Naomi Lepley, Somerset County, Pa.

Yes, a long time ago, a little. Most of my riding was on Merrylegs, our pony. I'm very anxious to ride again.

COUSIN RUTH.

Dear Forum Friends:—I have found so many very nice recipes on the Forum page that I am going to ask if any of you can kindly send me recipes for deviled eggs, deviled ham and chicken salad.—Mrs. Lillian L. Stout, Carbon County, Pa.

I told Mrs. Stout that I was sure you would be glad to help her. If you send recipes send them to me and I'll put them on the page.

COUSIN RUTH.

Dear Cousin Ruth:—We have a dog, his name is Don. We have harness and a little cart and hitch him up sometimes.

We have four sheep and two little lambs. They are just getting big enough to run around. I like to play with them.—Arlene Shumaker (ten), Perry County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a sister Ruth. We have good times playing with our dolls. Cousin Ruth, do you ever wish you were a girl again so that you could play dolly again? I made a verse about mine.

I had a dolly named Ethel-May;
She went to the barn on a load
of hay.

She really did, too. I like to make up verses. Sometimes I will send in a longer one about my kitty.—Prudence Clark, (X), Susquehanna County, Pa.

KERMIT, JANET & WILLIS PATTON,
Janet Patton, Mercer County, Pa.

Dear Forum Friends and Cousin Ruth:—In school we started a society which we decided to call "The Garfield School Literary Society." We have a small program every other week. This week it consisted of solos, recitations, nature study topics, current events from the paper and piano duets.

We also started a paper in which we put jokes said by the pupils and current events. I was editor of the paper in January and also in March.—Marian E. Wagner, (X), Lancaster County, Pa.

OUR SCHOOL TWO YEARS AGO
Steven Lapikas, Mercer County, Pa.

Dear Cousin Ruth:—I started a letter a few weeks ago but I didn't finish it, so by this time the news has grown stale.

I will send a recipe for a cake which I like very well.

SPONGE CAKE

2 eggs beaten until lemon yellow
Add pinch salt and 1 cup sugar
1 cup flour
1 teaspoon baking powder
1 teaspoon vanilla
½ cup boiling water added just before putting in the oven.

I have tried many recipes on this page and like them.—Philura Klipple (X), Lackawanna County, Pa.

Dear Cousin Ruth:—I received your letter and membership button for which I thank you very much.

I live on the main highway between Baltimore and Philadelphia. The Mason and Dixon Line crosses one of our fields and there is a line stone in it.

There are 200 acres in this farm. My mother raises chickens and turkeys, and we children raise ducks.—Elizabeth Baker, twelve (X), Cecil County, Md.

Dear Cousin Ruth:—We have three geese. They are laying now. My Daddy wants to get me a pony this summer. I would like one very much.

Daddy runs a dairy. We have thirteen cows and seven heifers. They all have been tuberculin tested. We have five registered Guernsey cows.

One of our neighbors was taken to the hospital this morning.—Sarah Emily Donovan, twelve, Sussex County, Delaware.

Dear Cousin Ruth and Forum Friends:—I am busy studying this year trying to pass my grade. How do you boys and girls like this kind of weather? I like it very much and play outside as much as I can. Cousin Ruth, I wish you were here. We would have the jolliest time of our lives. My brother and I have great fun skiing.

In our school the pupils furnish the milk and the teacher brings cocoa and sugar, so we can have hot cocoa for our lunch. I help to do the work in the house, besides I feed the chickens, gather the eggs and help milk the cows.—Stella Zimnock, eleven (X), Wyoming County, Pa.

Dear Cousin Ruth:—We just got a little dog. We also have three cats. But of all my pets I like the pony best. My pony is black. He is very pretty. When you ride him he holds his head up. He is not very easy to catch but if you give him sugar or candy he will come to you. His name is Nick, and I like to ride him in the summer.

We have a good many chickens. We have a large apple orchard.—Violet Ansell, twelve (X), Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—How did you like this winter? I did not like it because there was too much snow. The snow was drifted so bad in some places that I could not go to school every day. Sometimes my father would go ahead and make a path for us. Sometimes I would ride horseback part way to school. My father would go along with me and bring the horse back. Spring will soon be here then the wild flowers and green trees will be here. I like to gather flowers. — Nora Gertrude Hartge, thirteen (X), Westmoreland County, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—You can solve this timely puzzle if you will make use of the alphabet plan—that is, let 1 stand for the letter "A," 2 stand for "B," etc. You may find it a help to make a list of the numbers of the letters before you start this puzzle. Now, look carefully at the series of letters and numbers below, and you will see that in some cases the numbers beside the letters will follow this alphabet plan, and in other cases they will not. For instance, there is a "1" by the letter "A," so that letter must be correct; and, a little later, I see "8" beside the letter "H," so that must be correct, too. Now, go thru the whole series below and write down in the order in which they appear, all the letters whose numbers are correct, according to the alphabet plan explained above. Then you will have the solution of this puzzle. When you have found the answer, send it to me on a POSTCARD so it reaches me by April 10th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the March 13 issue of Pennsylvania Farmer is: GEOGRAPHY.

The puzzle prize winners are: Emma Dager, age 8, Bristol, Pa.; Sara Davis, age 10, Bridgeton, N. J.; Earl H. Fenstermaker, age 10, Kutztown, Pa.; Scott E. Lankford, Jr., age 8, Hurlock, Md.; Alberta Moore, age 8, Stewartsville, N. J.; Violet Neidigh, age 9, State College, Pa.; Florence A. Schuler, age 12, Jackson Center, Pa.; Luther Singley, age 9, Delano, Pa.; Abner Stern, age 10, Elizabethtown, Pa.; Allen Thierolf, age 9, Line Lexington, Pa..

Honor Prize Winner: Paul Greenfield, age 10, Jasper, N. Y.

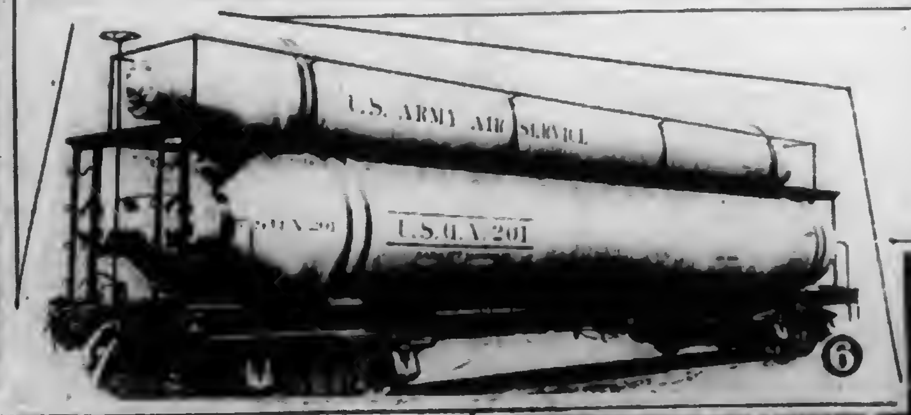
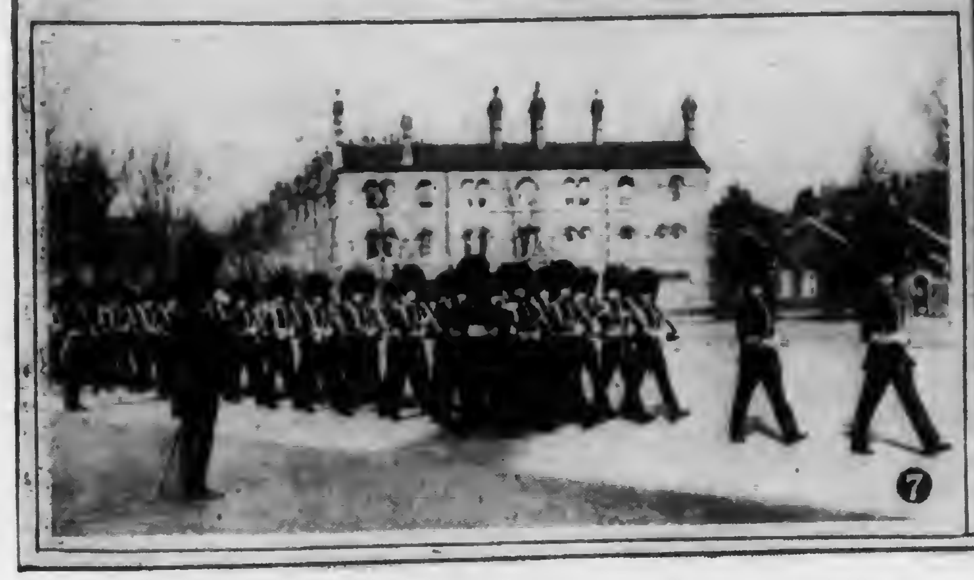
PASSING EVENTS IN PICTURES





(Copyright by Underwood & Underwood.)

1.—A lineman connecting a special telephone line between Plymouth and Washington which kept the President in touch with his father's condition during his illness. Colonel Coolidge died March 18th.

2.—Thru "fresh air treatment" these undernourished children gain two to three pounds a week. When normal weight, they are sent back to regular schools.

3.—This German police dog can't understand a word of English!

4.—Tame deer in Windsor Park, London.

5.—Mrs. Nellie Tayloe Ross, Governor of Wyoming, represented her state at a mass meeting in New York on March 18th. The meeting was planned as a tribute to professional women.

6.—This new tank car contains 206,000 cubic feet of helium, enough to inflate an ordinary sized blimp.

7.—The Prince of Wales, Colonel-in-Chief of the Welsh Guards, inspecting the Guards at the Chelsea Barracks.

8.—An interesting sporting event is the annual "snow to surf" race from Lake Arrowhead, California, to the Pacific. One of the contestants ready to start.

Ice-Bound Hearts

By James Oliver Curwood

HOW THE STORY STARTED

AT POINT FULLERTON, 1000 miles north of civilization, Sergeant William MacVeigh concluded his semi-annual report to the commissioner of the Royal Northwest Mounted Police. "I have made every effort to run down Scottie Deane, the murderer. I have not given up hope of finding him, but I believe that he has gone from my territory. . . ." On his bunk in a corner of the little cabin lay his comrade, Private Pelletier, sick, almost to madness after nine months of loneliness.

Half an hour later MacVeigh set out for Fort Churchill, 450 miles across the ice to deliver the report, get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed brought word he'd seen a white man and woman ten miles south of the Maguse River. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. Billy promised to see her safely to her destination, the Little Seal. After pitching her tent he drew the box inside. When he awoke late next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane. There was a price on his head and fame for the man who captured him, but Scottie was more than an outlaw to Billy now.

Suddenly a team of dogs, a sledge, and three men came towards him out of the storm and the next thing he knew Bucky Smith, the corporal who hated Billy, had leveled a revolver at him. The party was in search of Scottie Deane. Tired out they rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy krew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. When he found them Scottie lay on a blanket by the fire, wounded. Instantly Billy was upon him, had the handcuffs about his wrists and was looking into a face not of a criminal but of a man he could have trusted.

(Continued from last week)

"I HATE to do this old man," he cried quickly. "It's hell to put those things on a man who's hurt. But I've got to do it. I didn't mean to come—no, s'elp me God I didn't—if Bucky Smith and two others hadn't hit your trail back at the old camp. They'd have got you—sure. And she wouldn't have been safe with them. Understand? She wouldn't have been safe! So I made up my mind to beat on ahead and take you myself.

"I want you to understand. And you do know, I guess. You must have heard, for I thought you were sure enough dead in the box, an' I swear to Heaven I meant all I said then. I wouldn't have come. I was glad you two got away. But this Bucky is a skunk and a scoundrel; and mebby if I take you, I can help you later on. They'll be here in a few minutes."

He spoke quickly, his voice quivering with emotion that inspired his words, and not for an instant did Scottie Deane allow his eyes to shift from Billy's face. When Billy stopped he still looked at him for a moment, judging the truth of what he had heard by what he saw in the other's face. And then Billy felt his hand tighten for an instant about his own.

"I guess you're pretty square, MacVeigh," he said, "and I guess it had to come pretty soon, too. I'm not sorry that it's you—and I know you'll take care of her."

"I'll do it—if I have to fight—and kill!"

Billy had withdrawn his hand, and both were clenched. Into Deane's eyes there leaped a sudden flash of fire.

"'That's what I did," he breathed, gripping his fingers hard. "I killed—for her. It was a skunk—and a scoundrel, too. And you'd have done it!"

He looked at Billy again. "I'm glad you said what you did—when I was in the box," he added. "If she wasn't as pure and as sweet as the stars I'd feel different. But it's just sort of in my bones that you'll treat her like a brother. I haven't had faith in many men. I've got it in you."

Billy leaned low over the other. His face was flushed, and his voice trembled.

"God bless you for that, Scottie!" he said.

A sound from the forest turned both men's eyes.

"She took the dogs and went back there a little way for a load of wood," said Deane. "She's coming back."

Billy had leaped to his feet and turned his face toward the ridge. He, too, had heard a sound—another sound, and from another direction. He laughed grimly as he turned to Deane.

"And they're coming, too, Scottie," he replied. "They're climbing the ridge. I'll take your guns, old man. It's just possible there may be a fight."

He slipped Deane's revolver into his holster, and quickly emptied the chamber of the rifle that stood near.

"Where's mine?" he asked.

"Threw 'em away," said Deane. "Those are the only guns in the outfit."

Billy waited, while Isobel Deane came thru the low-hanging spruce with the dogs.

THERE was a smile for Deane on Isobel's lips as she struggled thru the spruce, knee-deep in snow, the dogs tugging at the sledge behind her. And then, in a moment, she saw MacVeigh, and the smile froze into a look of horror on her face. She was not twenty feet distant when she emerged into the little opening, and Billy heard the rattling cry in her throat. She stopped, and her hands went to her breast.

Deane had half raised himself, his pale, thin face smiling encouragingly at her, and with a wild cry Isobel rushed to him and flung herself upon her knees at his side, her hands gripping fiercely at the steel bands about his wrists. Billy turned away. He could hear her sobbing, and he could hear the low, comforting voice of the injured man. A groan of anguish rose to his own lips, and he clenched his hands hard, dreading the terrible moment when he would have to face the woman he loved above all else on earth.

It was her voice that brought him about. She had risen to her feet, and she stood before him, panting like a hunted animal; and Billy saw in her face the thing which he had feared more than the sting of death. No longer were her blue eyes filled with the sweetness and faith of the angel who had come to him from out of the barren. They were hard and terrible, and filled with that madness which made him think she was about to leap upon him.

In those eyes, in the quivering of her bare throat, in the sobbing rise and fall of her breast, were the rage, the grief, and the fear of one whose faith had turned suddenly into the the deadliest of all emotions; and Billy stood before her without a word on his lips, his face as cold and as bloodless as the snow under his feet.

"And so you—you followed—after—that!"

IT WAS all she said, and yet the voice, the significance of the choking words, hurt him more than if she had struck him. In them there was none of the passion and condemnation he had expected. Quietly, almost whisperingly uttered, they stung him to the soul. He had meant to say to her what he had said to Deane—even more. But the crudeness of the wilderness had made him slow of tongue; and while his heart cried out for words, Isobel turned and went to her husband. And then there came the thing he had been expecting.

Down the ridge there raced a flurry of snow and a yelping of dogs. He loosened the revolver in his holster and stood in readiness when Bucky Smith ran a few paces ahead of his men into the camp. At sight of his enemy's face, torn between rage and disappointment, Billy's old coolness returned to him.

With a bound Bucky was at Scottie Deane's side. He looked down at his manacled hands, and at the woman who was clasping them in her own, and then he whirled on Billy.

"You're a liar and a sneak!" he panted. "You'll answer for this at headquarters. I understand now why you let 'em go back there. It was her! She paid you—paid you in her own way—to free him! But she won't pay you again—"

At his words Deane had started as if stung by a wasp. Billy saw Isobel's whitened face. The meaning of Bucky's words had gone home to her as swiftly as a lightning flash, and for an instant her eyes had turned to him. Bucky got no further than those last words. Before he could add another syllable Billy was upon him. His fist shot out—once—twice—and the blows that fell sent Bucky crashing thru the fire. Billy did not wait for him to regain his feet. A red light blazed before his eyes. He forgot the presence of Deane and Walker and Conway. His one thought was that the scoundrel he had struck down had flung at Isobel the deadliest insult that a man could offer a woman, and before either Conway or Walker could make a move he was upon Bucky.

He did not know how long or how many times he struck; but when at last Conway and Walker succeeded in dragging him away, Bucky lay upon his back in the snow, blood gushing from his mouth and nose. Walker ran to him. Panting for breath, Billy turned toward Isobel and Deane. He was almost sobbing. He made no effort to speak. But he saw that the thing he had dreaded was gone.

Isobel was looking at him again—and there was the old faith in her eyes. At last—she understood! Deane's handcuffed hands were clenched. The light of brotherhood shone in his eyes; and where a moment before there had been grief and despair in Billy's heart, there came now a warm glow of joy. Once more they had faith in him!

Walker had raised Bucky to a sitting posture, and was wiping the blood from his face, when Billy went to them. The corporal's hand made a limp move toward his revolver. Billy struck it away and secured the weapon. Then he spoke to Walker.

"There is no doubt in your mind but that I hold a sergeancy in the service, is there, Walker?" he asked.

His tone was no longer one of comradeship. In it there was the ring of authority. Walker was quick to understand.

"None, sir!"

"And you are familiar with our laws governing insubordination and conduct unbecoming an officer of the service?"

Walker nodded.

"Then, as a superior officer, and in the name of his majesty the king, I place Corporal Bucky Smith under arrest, and commission you, under oath of the service, to take him under your guard to Churchill, along with the letter which I shall give you for the officer in charge there. I shall appear against him a little later with the evidence that will outlaw him from the service. Put the handcuffs on him!"

STUNNED by the sudden change in the situation, Walker obeyed without a word. Billy turned to Conway, the driver.

"Deane is too badly injured to travel," he explained. "Put up your tent for him and his wife close to the fire. You can take mine in exchange for it as you go back."

He went to his kit, and found a pencil and paper. Fifteen minutes later he gave Walker the letter, in which he described to the commanding officer at Churchill certain things which he knew would hold Bucky a prisoner until he could appear against him. Meanwhile Conway had put up the tent and had assisted Deane into it. Isobel had accompanied him.

Billy then had a five minutes' confidential talk with Walker, and when the constable gave instructions for Conway to prepare the dogs for the return trip there was a determined hardness in his eyes as he looked at Bucky. In those five minutes he had heard the story of Rousseau, the young Frenchman down at Norway House, and of the wife whose faithlessness had killed him. Besides, he hated Bucky Smith, as all men hated him. Billy was confident that he could rely upon him.

Activities of Al Acres:—*Slim Doesn't Need to Diet; He Needs to Be Searched* : : : *By Leet*

TELL YER MAW I'M DIETING, AN' I'M CUTTIN' DOWN MY PAN CAKES TO TEN!
GOSH! YOU AREN'T SICK, ARE YOU?
THAT'S FUNNY! HERE I GO ONA DIET AN' I GAIN FIVE POUNDS SINCE YES'T'DAY!
HEY, SLIM, WAIT'
I S'POSE I GOTTA CUT OUT ANOTHER PAN CAKE!
I'LL HELP YOU REDUCE, SLIM!
?
LEET

Not until dogs and sledge were ready did Bucky utter a word. The terrific beating he had received had stunned him for a few minutes, but now he jumped to his feet, not waiting for the command from Walker, and strodo up close to Billy. There was a vengeful leer on his bloody face, and his eyes blazed almost white, but his voice was so low that Conway and Walker could only hear the murmur of it. His words were meant for Billy alone.

"For this I'm going to kill you, MacVeigh," he said; and in spite of his contempt for the man, there was a quality in his low voice that sent a curious shiver thru Billy. "You can send me from the service, but you're going to die for doing it"

Billy made no reply, and Bucky did not wait for one. He set off at the head of the sledge, with Conway a step behind them. Billy followed with Walker until they reached the foot of the ridge. There they shook hands, and Billy stood watching them until they passed over the cap of the ridge.

HE RETURNED to the camp slowly. Deane had emegerged from the tent, supported by Isobel. They waited for him and in Deane's face he saw the look that had filled it after he had struck Bucky Smith. For a moment he dared not look at Isobel. She saw the change in him, and her cheeks flushed. Deane would have extended his hands, but she was holding them tightly in her own.

"You'd better go into the tent and keep quiet," advised Billy. "I haven't had time yet to see if you're badly hurt."

"It's not bad," Deane assured him. "I bumped into a rock sliding down the ridge, and it made me sick for a few minutes.

Bily knew that Isobel's eyes were on him, and he could almost feel their questioning. He began to take wood from the sledge she had loaded and threw it on the fire. He wished that Scottie and she had remained in the tent—for a little longer. His face burned and his blood seemed like fire, when he caught a glimpse of the steel cuffs about Deane's wrists.

Thru the smoke he saw Isobel still clasping her husband. He could see one of her little hands gripping at the steel band, and suddenly he sprang across and faced them, no longer fearing to meet Isobel's eyes, or Deane's. Now his face was aflame with a wonderful joy, and he half held out his arms to them as he spoke, as tho he would clasp them both to him in this moment of sacrifice and self-abnegation and the dawning of new life.

"You know—you both know why I've done this!" he cried. "You heard what I said back there, Deane—when you was in the box— an' all I said was true. She came to me out of that storm like an angel—an' I'll think of her as an angel all my life. I don't know much about God—not the God they have down there where they take an eye for an eye an' a tooth for a tooth, and kill because some one else has killed. But there's something up here in the big, open places—something that makes you think, and makes you want to do what's right and square, an' she's got all I know of God in that little Bible of mine—the blue flower.

"I gave the blue flower to her, an' now and forever she's my Blue Flower. I ain't ashamed to tell you, Deane, because you've heard it before, an' you know I'm not thinking it in a sinful way. It'll help me if I can see her face, an' hear her voice, and know there's such love as yours after you're gone. For I'm going to let you go, Deane, old man. That's what I came for—to save you from the others an' give you back to her. I guess mebby you'll know—now—how I feel—"

HIS voice choked him. Isobel's glorious eyes were looking into his soul, and he looked straight back into them, and saw all his reward there. He turned to Deane. His key clicked in the locks to the handcuffs, and as they fell into the snow the two men gripped hands, and in their strong faces was that rarest of all things, love of man for man.

"I'm glad you know," said Billy softly. "It wouldn't be fair if you didn't, Scottie. I can think of her now, an' it won't be mean and low. And if you ever need help—if you're down in South America or Africa—anywhere—I'll come if you send word. You'd better go to South America. That's a good place. I'll report to headquarters that you died—from the fall. It's a lie; but Blue Flower would do it, and so will I. Sometimes, you know, the friend who lies is the only friend who's true—and she'd do it—a thousand times—for you."

"And for you," whispered Isobel.

She was holding out her hands, her blue eyes streaming with tears of happiness, and for a moment Billy accepted one of them, and held it in his own. He looked over her head as she spoke.

"God will bless you for this—some day," she said, and a sob broke her voice. "He will bring you happiness — happiness — in what you have dreamed of. You will find a Blue Flower—sweet and pure and loyal—and then you will know even more fully what life means to me with him."

And then she broke down, sobbing like a child, and with her face buried in her hands turned into the tent.

"Gawd!" whispered Billy, drawing a deep breath.

He looked Deane in the eyes, and Deane smiled a rare and beautiful smile.

For a quarter of an hour they talked alone, and then Billy drew a wallet from his pocket.

"You'll need money, Scottie," he said. "I don't want you to lose a minute in getting out of the country. Make for Vancouver. I've got three hundred dollars here. You've got to take it, or I'll shoot you!"

He thrust the money into Deane's hands as Isobel came out of the tent. Her eyes were red, but she was smiling, and she held something in her hand. She showed it to the two men. It was the blue flower Billy had given her. But now its petals were torn apart, and nine of them lay in the palm of her hand.

"It can't go with one," she spoke softly, and the smile died on her lips, "There are nine petals, three for each of us."

She gave three to her husband and three to Billy, and for a moment the men stared at them as they lay in their rough and calloused palms. Then Billy drew out the bit of buckskin in which he had placed the strands of Isobel's hair, and slipped the blue petals in with it. Deane had drawn a worn envelope from his pocket. Billy spoke low to Deane.

"I want to be alone for a while—until dinner-time. Will you go into the tent with her?"

When they were gone Billy went to the spot where he had dropped his pack before crawling up on Deane. He picked it up and slipped it over his shoulders as he walked. He went swiftly back over his old trail, and this time it was with a heart leaden with a deep and terrible loneliness. When he reached the ridge he tried to whistle, but his lips seemed thick, and there was something in his throat that choked him. From the cap of the ridge he looked down. A thin mist of smoke was rising from out of the spruce. It blurred before his eyes, and a sobbing break came in his low cry of Isobel's name. Then he turned once more back into the loneliness and desolation of his old life.

"I'm coming, Pelly," he laughed, in a strained, hard way. "I haven't given you exactly a square deal, old man; but I'll hustle and make up for lost time!"

A WIND was beginning to moan in the spruce-tops again. He was glad of that. It promised strom. And a storm would cover up all trails.

Away up at Fullerton Point, amid the storm and crash of the arctic gloom, Pelletier fought himself thru day after day of fever, waiting for MacVeigh. At first he had been filled with hope. That first glimpse of the sun they had seen thru the little window on the morning that Billy left for Fort Churchill had come just in time to keep reason from snapping in his head. For three days after that he looked thru the window at the same hour, and prayed moaningly for another glimpse of that paradise in the southern sky.

But the storm thru which Isobel had struggled across the barren gathered over his head and behind him—day after day of it—rolling and twisting and moaning with the roar of the cracking fields of ice, bringing back once more the thick death-gloom of the arctic night that had almost driven him mad. He tried to think only of Billy, of his loyal comrade's race into the south, and of the precious letters he would bring back to him—and he kept track of the days by making pencil-marks on the door that opened out upon the gray and purple desolation of the arctic sea.

(To be continued next week)

News and Notes

A HERD of 388 elk was recently shipped from the National Bison Range in Montana to Middleboro, Massachusetts. Experienced cow-punchers captured the wild animals, sawed off their horns to prevent injuries during shipment, and loaded them into cars for the 3000-mile trip to Massachusetts. Game experts believe the herd will thrive in the New England climate and furnish a supply for parks and zoos. Surplus animals will be used for meat.

The acreage of wheat grown on Pennsylvania farms has changed very little in the last forty-five years, according to J. M. McKee, Deputy Secretary of Agriculture. In 1880 the acreage for the state was about 1,445,000. During the last five years it has averaged 1,244,000 acres per year.

* * *

Some communities in the Middle West add small amounts of iodine to their water supply to make up for a deficiency of this element in the diet of the people. Lack of iodine often causes goiter. Fish, oysters, clams and seaweed contain iodine and are recommended as food by dietitians. Seaweed is commonly used as food in China.

* * *

Every material thing is made up of various combination of the ninety-two chemical elements, scientists tell us. Eighty-eight elements have been discovered and named. Chemists are confident that four more exist and will be found eventually. One element was discovered recently by a professor at the University of Illinois. It was named Illinium. Another, helium, was known to exist on the sun before it was found on earth.

* * *

Two of the night air mail pilots recently broke all records by carrying 160 pounds of mail from Chicago to New Brunswick, New Jersey, in four hours and thirty-five minutes, actual flying time. The first pilot left Chicago at 7:38 P. M. and flew to Cleveland, where the mail was transferred to another plane. Another pilot took the second plane the rest of the way to New Brunswick, landing there at 2:50 A. M. The fastest passenger trains make the same trip in about twenty hours.

* * *

Wanted, in Chicago, one million gallons of ocean water. About 125 tank cars of sea water are to be used in a new Chicago aquarium to make the deep-sea fishes feel at home. Synthetic salt water won't do. It may look the same and taste the same, but the fish can live only in the real stuff, tho they are not particular whether it comes from the Atlantic, Pacific or Gulf of Mexico.

* * *

During 1925 a single steamship company carried across the ocean between the United States and Europe as many people as there are in Reading and Erie together, and more than one-third as many as live in Pittsburgh.

* * *

The population of Philadelphia County averaged 13,713 persons per square mile in 1920. Pike County averaged twelve and a half persons per square mile. York County averaged 160, Wayne 37, Northumberland 269, Crawford 58, Washington 219, and Chester 148 persons per square mile.

Did you ever hear this one?—

An Irishman was newly employed at a lumber office. The proprietors of the company were young men and decided to have some fun with the new Irish hand. Pat was duly left in charge of the office, with instructions to take all orders which might come in during their absence. Going to a nearby drug store, they proceeded to call up the lumber company's office, and the following conversation ensued:

"Hello. Is this the East Side Lumber Company?"

"Yes, sir. And what would you be havin'?"

"Take an order will you?"

"Sure. That's what I'm here for."

"Please send up a thousand knot holes."

"What's that?"

"One thousand knot holes."

"Well, now, an' ain't that a bloomin' shame. I'm sorry but we are just out of them."

"How's that?"

"Just sold them to a brewery."

"To the brewery? What do they want with them?"

"By golly, an' they use them for bung-holes in barrels."—The Mill-whistle.

"Say, pa."

"Well, my son."

"I took a walk thru the cemetery today and read the inscriptions on the tombstones."

"Well, what about it?"

"Where are all the wicked people buried?"—Syracuse Orange Peel.

"Your case," said the doctor, "is
chronic;
I think what you need is a tonic."
"All right, doctor dear,
What's the matter with beer?"
"Nay, nay," said the Doc, "that's
Teutonic."

"Papa, are you still growing?"

"No, my dear. Why?"

"Because the top of your head is coming thru your hair."

Book Agent—Have you any children?

Farmer—Yes.

Agent—You're just the man. Why not buy them an encyclopedia?

Farmer—Waal, it might be all right for the girl, but, by gum! the boys are no better than me, and I had to walk to school all my life.

"It must be three years since I saw you last. I hardly knew you—you've aged so."

"Really! Well, I wouldn't have known you except for that dress."

Engine Driver's Sweetheart—And do you always think of me during your long night trips?

Engine Driver—Do I? Why, I've wrecked a train that way already.

Engine Driver's Sweetheart—Oh, you darling!

Lady Friend—I suppose you carry a memento of some sort in that locket of yours."

Mrs. Jas. C.—Yes, it's a lock of my husband's hair.

Lady Friend—But your husband is still alive.

Mrs. Jas. C.—Yes, but his hair is gone.

You can't judge a tire by the outside

You can't tell by looking at a cow how much milk she will give.

Neither can you tell by looking at a tire how much mileage is built into it.

A big, thick tread doesn't always mean mileage; the rubber may not be new, live rubber.

Every ounce of rubber used in the tread and carcass of a Kelly-Springfield Balloon or Flexible Cord tire is tough, new rubber.

When you buy a Kelly, you are buying not only the finest workmanship but the best possible material and hence the greatest amount of mileage that can be built into a pneumatic tire.

And Now It Is the Men's Turn

(Continued from page 3)

right and I am wrong. When I suggest a better way, it hurts to have my wife say, "All bosh; you are doing it just to be mean."

It becomes almost unbearable when my wife tells my neighbors and others what a mean man I am in my family when I merely ask for fair play and try to do my duty as a father and husband. I believe that we should both stand shoulder to shoulder in the matter of child training for their sakes.

I wish my wife would be more considerate of my wishes, that she were more friendly and willing to converse freely on topics of home life as well as subjects of general interest.

Think of the Children

I feel that a young man who is brought up in a home where father and mother cannot even agree to disagree (however, I am willing to let well enough alone) is poorly prepared to meet life and its problems when he leaves home.

My wife declares that she has never made mistakes, because she always thinks before she speaks and acts, so that she never has anything to be sorry for or anything to take back. She says that all the wrongs of our family life can be placed upon my shoulders where they belong.

Perhaps I am not all that I should be, but I wish that I might have a word of praise now and then, just a little cooperation. It would make this old world seem like a different place to live in.—E. A. B.

Please, Let His Desk Alone!

WELL, we've been married long enough (eight years) for all the novelty to have worn off. We are now at the point where we can see the good and bad faults in each other a great deal better than we could eight years ago.

I have a good wife, and that's saying a great deal, and I appreciate the fact that I have a good helpmate. Nevertheless, she, like the rest of us, has a few faults tho I will limit her to two GRIEVOUS ones in my estimation.

First, I wish she'd let my desk, or what serves as a desk, alone. To her it looks mussed up. Therefore, she thinks she must straighten things up. I know where things are when I leave my desk, but when she is done with it, well, I lose quite a bit of valuable time and patience hunting for what I want, so I wish she'd leave my desk as I left it.

Home a Place to Live

Second, I believe my house is my castle for my family to live in and not the neighbors. Therefore, I don't care if the living room is upset occasionally by the children. My wife thinks otherwise, however, and the result is if I don't have a chance to read my daily paper and weekly magazines within twenty-four to thirty-six hours they go—out, and eventually find themselves in the attic so that I am the loser of much, to me, good reading material.

Therefore, if my wife could only keep her hands out of "straightening up" my desk and "straightening up" the newspapers in the living room I would be 100 per cent happy so far as married life is concerned. —H. R. M.

Three Changes He'd Make

I WONDER, Mr. Editor, if you realize that you have shoved us off where the ice is mighty thin and the water pretty deep! How dare you criticize your wife! I have looked mine over pretty carefully and there's very little I'd change if I could. She has the very best disposition of any women in the whole county. I know, because my friends all say that a woman who can live with me as long as she has must be nearly an angel. She is a good cook, a godd manager, a conservative dresser and in our twenty-seven years of married life we have never had a cross word and never expect to. What more could a man want?

After careful thought I find just three things that I might change. After the American fashion we occupy the same bed. If I happen to retire first and get to sleep before she comes I'm O. K., if not, I hear her going thru the same performance night after night. Dogs you know turn around three times before lying down. Well, sir, she takes the wrinkles out of the sheets thirty times before going to sleep. I wouldn't mind it if she'd do it quietly but instead she raises her body on her knees and elbow, pulls the wrinkles out with her left hand, and down she comes like a thousand of brick. Thirty times by actual count on each night.

Change Two. We use woolen bed blankets and sleep with the windows open. I fold the top sheet over the quilts so as to make a nice soft place for my bald head but before I know it she has spoiled every thing by pulling the covers about until only the rough blankets are rasping at my smooth bald pate.

Perhaps It's a Bad Suggestion

Change Three. I dread to mention this fault for it is really a virtue and if other women find how effectually it works I fear that many, many of them will be trying it and the men will be reformed in spite of themselves. It is the surest way to make a husband feel his inferiority and keep his place. That is her way of saying "Hump-pooh-Umphum" all in the same breath, not separately, understand, but sort o' together like this: "Hpoumphumoohump." It really must be heard to be appreciated. Suppose I stay out a little late some night and "sit in" with the boys for a little visit. When I get home and attempt to explain and think I have got things smoothed out pretty well she comes back at me with that terrible expressive combination that actually shrivels me up to nothing. I realize how frail is man.

If she'd only slam a door, kick over a chair or throw a flat iron at my head I wouldn't mind—but to be shrivelled—it's too much.

Aside from these three things she's fine, and I'm here to say men, if you will get right down to tacks and give your wife a fair show you'll find her faults are about as important as the ones I have mentioned.—L. C. B.

Keep Smiling All the Time

IT'S the most discouraging thing in the world to come in the house and hear your wife nagging and finding fault with everything if things don't go just as she thinks they should. If wives could only see the bright side of life instead of the dark side, how much happier so many homes would be. The great trouble is we don't take time to think before we speak. If one could have a smile on his face instead of a frown then there would be more sunshine and happiness in our homes.

If mother always has a smile on her face then when she is done smiling and has passed out of this world the sons and daughters will always remember that smile on mother's face.—F. E. P.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Which Fertilizer Is Best

What is the best fertilizer for corn and potatoes? Is agricultural salt good for corn? Also is there lots of potash in the soil that is not available? What can be done to loosen the potash?

A good corn fertilizer should contain from two to four per cent of ammonia, eight to twelve per cent of phosphoric acid and three to six per cent of potash. Where corn is planted on sod land rich in nitrogen, two to three per cent of ammonia in the mixture might be enough.

Where manure is used together with commercial fertilizer, two to three per cent of ammonia would be all the crop could use to advantage. On the other hand, if the land is not in a good state of fertility and is poor in humus, a mixture containing four per cent of ammonia would give better results. For medium and heavy soils, three to four per cent of potash might be sufficient. If the land is not in a good state of fertility or light, five to six per cent of potash would be better.

For potatoes, the fertilizer should furnish at least four to five per cent of ammonia, seven to nine per cent of phosphoric acid and four to seven per cent of potash. The amounts used for the two crops would vary, since the common application for corn is from 200 to 500 pounds per acre while for potatoes the amounts employed more often range from 800 to 1500 pounds per acre.

Salt Indirect Fertilizer

Agricultural salt may be used with benefit if it is remembered that it is an indirect rather than a direct fertilizer. Small quantities of salt incorporated into the soil will stimulate chemical changes in the soil and will help to make available larger quantities of potash and of phosphoric acid. It is doubtful whether it would be safe to use more than seventy-five to 100 pounds per acre, broadcast, on medium or heavy soil.

Most soils contain a good supply of potash. In sandy soils the total potash will vary from .1 to .5 per cent or more. It is only in the case of very light, open sands that less than .5 per cent of total potash is usually found. In medium loams the amount of potash may vary from about 0.5 to 1.5 per cent, while in the clay loams and clay soils it may range from less than 1.00 to 2.5 per cent or even more. This represents very large amounts of potash.

Under ordinary conditions, this potash does not become available fast enough to supply the needs of a vigorous crop during the growing season. For this reason, small quantities of potash applied on crops like potatoes, corn, beets or tobacco often produce striking results. By maintaining in the soil a good supply of vegetable matter, by liming occasionally and by using such fertilizers as nitrate of soda, the rate of availability in the soil potash may be increased.—J. G. Lipman.

Sweet Clover in Wheat

I have two and one-half acres of ground seeded to winter wheat last fall. I want to plant sweet clover in this ground to plow down in spring of 1927 for corn. Can sweet clover be sown broadcast in the wheat this spring as we do crimson clover, or should I wait until wheat is harvested, then harrow ground and seed the sweet clover? No lime has been applied. —F. A. C., Chester County, Pa.

The sowing of sweet clover seed in wheat early in the spring has given very good results in Pennsylvania, New York and northern New Jersey.

After the wheat is harvested, the sweet clover will make rapid growth, and will give you a very satisfactory crop to plow under the following spring. If your land is very sour, it might be desirable to delay sowing the sweet clover until after the wheat is harvested. In that case, the land should be plowed as soon as may be practicable, a good dressing of lime worked into the top soil and the sweet clover seed sown at the rate of twenty to twenty-five pounds per acre.

On the other hand, if your land is only slightly acid, the sowing of the sweet clover seed in the wheat early in the spring might be the better practice.—J. G. Lipman.

On Sassafras Loam

I have planned a rotation on sassafras loam as follows: wheat and sweet clover; corn, sweet clover seeded between rows at last working; soy beans in rows for seed. Lime is to go on the wheat ground before seeding; manure is spread on the sweet clover sod which goes to corn; soy bean stubble is disced for wheat. Would it be good practice to sow the sweet clover with the wheat in the fall rather than on the growing wheat next spring? If so, would you recommend sowing unscarified seed? Would you advise adding timothy if sweet clover is seeded with the wheat in the fall?—J. S. F.

The rotation which you have suggested provides for the satisfactory maintenance of a good supply of nitrogen in the soil by means of legumes. There is considerable doubt as to the advisability of seeding sweet clover with wheat in the fall. You will presumably sow your wheat very late in September or at the beginning of October. Sweet clover seed sown at that time, even tho scarified seed be employed, is not likely to make enough of a start to assure its coming thru the winter safely. Hence, it would be better to sow the sweet clover seed in the wheat early in the spring.

If Conditions are Favorable

Under favorable conditions you might be successful in obtaining a good legume stand by using a mixture of crimson clover and winter vetch or perhaps of crimson clover, winter vetch, alsike and sweet clover. The crimson clover and vetch might be a fairly safe bet when sown with the wheat. You might use ten to twelve pounds of winter vetch and five to six pounds each of crimson and sweet clover. Instead of the sweet clover, you might employ alsike if your land has more than a slight degree of acidity. Should you prefer to sow the sweet clover seed in the spring, it would be well to use twenty to twenty-five pounds of seed per acre. The timothy might be sown with the wheat in the fall.

The sowing of sweet clover in the corn at the time of the last cultivation is somewhat of a hazard where the corn has been planted in drills and the variety is a rank one, shading the ground more or less thoroly. Under such conditions, and especially in a dry summer, the sweet clover might not have much chance to develop. Where the corn is check rowed or planted in hills and the ground not thoroly shaded, as happens to be the case with smaller varieties of corn, sweet clover sown as suggested should be successful.—J. G. Lipman.

Your Neighbors Will Tell You The Same!

WHEN you read such letters—and we have hundreds of the same kind in our files—you read the record of twenty-six years of hard work, honest service, expert knowledge and constant striving for improvement in spreader building.

NEW IDEA SPREADER
An Invention ~ Not an Imitation

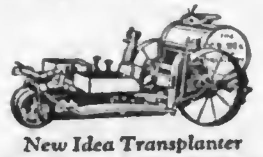
The founder of our company was the inventor of the wide-spreading spreader, and practically every improvement in manure spreaders originated with us. We have always invented—never imitated.

Our newest improvement is "Balloon Tires"—a wheel with a wide face that will not cut up the fields—and continuous cleats which mean better traction and easier riding. Correct design, coupled with the use of copper-bearing and auto-bumper steels—makes the NEW IDEA the light-weight, easy-running spreader of super-strength.

See the NEW IDEA dealer today—or write us direct for complete details and prices.

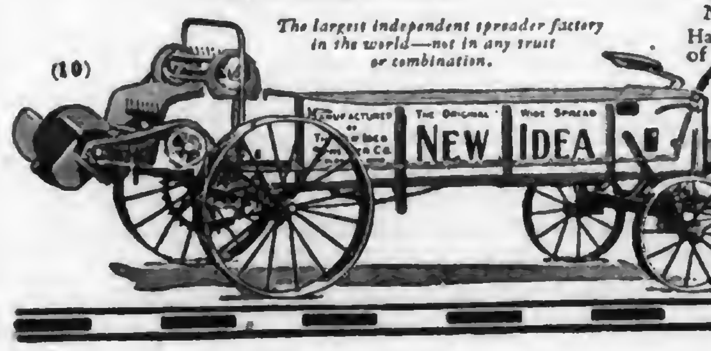
THE NEW IDEA SPREADER COMPANY
COLDWATER, OHIO

The largest independent spreader factory in the world—not in any trust or combination.



New Idea Transplanter
Handles perfectly all kinds of transplanting—plants, bulbs, lining-out stock, etc. Many new features.

(10)



Covered by Original Patents. Widely Imitated—Never Equalled

POTASH

is an essential element in the production of crops that pay. It should be applied as a part of a complete fertilizer. For many of the Eastern crops and soil types the best farmers use fertilizers containing 10 percent or more potash.

Why Plant 'em by Hand?

You Can Do It Better with the McCormick-Deering Planter!

Government Bulletin No. 1188 says: "It is significant that the yield of potatoes is less, and the cost of production greater on farms where planting is done by hand than on those planted with machines."

The McCormick-Deering potato planter handles cut seed and small whole seed with an accuracy as nearly one hundred per cent as it is possible to obtain with a mechanical planter. It possesses new and distinctively McCormick-Deering features, and employs the latest and approved principles of potato planter construction.

McCormick-Deering Potato Digger

The McCormick-Deering digger is made in a 6-ft. size for two horses and a 7-ft. size for four horses. The rear shaker thoroughly separates the potatoes from the dirt, and the vine turners throw vines and weeds to the side, leaving the potatoes in a clean row behind the digger.

Your local dealer can show you these McCormick-Deering planters and diggers. See him without delay.

Sample of Printing, Exact Size

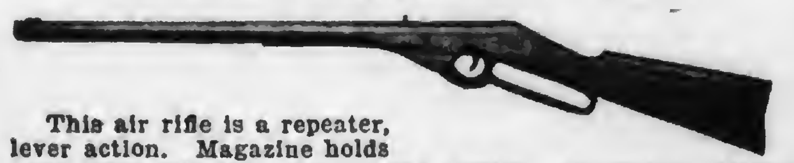
50 Sheets
Writing Paper
25 Envelopes
to Match

Why not write to your friends on your own personal stationery? It lends style and dignity to your letters. Creates a favorable impression in writing to business houses. Let us send you 50 sheets of stationery and 25 envelopes, made of fine, smooth texture, water-marked Bond in the uniform size, so popular for personal use. Name and address is printed at top of Note Sheets and on flap of Envelopes in rich blue ink with Copper Plate Gothic type and the stationery is packed in an attractive, white covered, hand-made box. You should accept the following liberal offer. You will be greatly pleased with this package of personal stationery.

OUR OFFER Send us only $1.25 and we will extend your subscription to Pennsylvania Farmer for one year and send you by prepaid parcel post this lot of personal stationery with your name and address on letter heads and envelopes just as described. Please write name and address plainly, or print it.

Pennsylvania Farmer, 261 So. 3rd St., Philadelphia, Pa.

1000 Shot Air Rifle



This air rifle is a repeater, lever action. Magazine holds 1000 light rifle shot, smooth and perfect. Automatic retainer prevents shot from rolling out of barrel.

36 inches long. Gun metal barrel. Walnut stock, dull finish. Given for 3 yearly subscriptions to Pennsylvania Farmer at $1.00 each. Reward No. 212.

PENNSYLVANIA FARMER 261 So. Third St., Phila., Pa.

RADIO DEPARTMENT

To Increase Loudness

We live in the country a quarter of a mile away from any telephone, electric wires or any one who has a radio. We have a one-tube set which uses a UV-199 tube, and at present use three 1½-volt A dry cell batteries, and one 22½-volt B battery. I would like to know how many batteries like the ones I am using can be used without damaging the tube. Is there any way to connect batteries on the headphones to make the reception better? Does it make any difference how many sets of headphones are used on the set? Now I am using just one set.—R. W. D., Northumberland County, Pa.

You cannot use more than three dry cells for the A battery of your set. Be very careful not to burn your tube more brightly than necessary as this will shorten its life and decrease its sensitivity. The only practicable way to increase the loudness would be to use an amplifier of one or two stages. A one-stage amplifier would require another UV-199 tube, a 30-ohm rheostat, an audio transformer and tube socket. This would require a 45-volt B battery.

If you wish to use two or three sets of headphones, connect them in series—that is—end to end. A 45-volt B battery will be necessary in place of the small one you now use.—B. F.

Plans to Buy a Set

I would like to get a radio but do not know what to get. I am quite deaf. What is the best speaker; would you advise the horn and would it hurt to be near the phone? Would the radio hurt the light plant? We have one and we don't want anything to interfere with that. The ear phones hurt my ears.—Mrs. G. R. W., Monmouth County, N. J.

It is against the policy of Pennsylvania Farmer to actually recommend any particular makes of radio apparatus. We are glad to refer you to our advertising columns, where dependable apparatus is described at times. It would be quite unfair to many manufacturers of good radio equipment to suggest any particular models that we might personally know about, since there are many other makes just as good.

Buy a Well-Known Make

You will get the best results by adopting a well-known make of set, one which the dealer always carries in stock, which does not sell at too low a price and by buying from a well established dealer who has a store carrying radio and electrical goods. This suggestion is made inasmuch as such a man has a reputation to sustain and will be more apt to handle higher grade radio sets and be honor-bound to give you service should trouble ever develop. Preferably get well-known tubes with this set and good batteries—you will find that such equipment is not the lowest in price, of course, but is the most economical in service.

As to the value of headphones or loud speaker for a deaf person, I would recommend headphones as distinctly superior for your purposes. You can have a radio man connect them up with the loud speaker. This permits easy regulation of the loudness in the phones without affecting the loud speaker for the rest of the family. For increased comfort, get a pair of rubber air cushions for radio headphones.

The radio set cannot possibly affect the light plant. You can even use the battery current to light the tubes in your set, as is being done on thousands of farms today. So long as the aerial wires outside are not too near the phone lines, the phone will not detract from the operation of the set. Inside, you may place the radio as near the telephone as you like.—B. F.

Tubes Need Testing

I have a three-tube set. Use A and B batteries all dry cells. Got all new batteries and looked over the connection, finding them all O. K. The tubes are all right. I use tubes WV-199. I can get only one station and that is Nashville, Tenn., but not very clear. I have had very little better results for the last few months but before December it was fine. I could get any station from Canada to Florida. Kindly advise me what you think is wrong.—Mrs. L. K. S., Cumberland County, Pa.

In practically all cases such as yours that have come to our attention the fault has been found with the dry cell tubes. Inasmuch as you have just put in brand new A and B batteries and have had very good results in the past, we believe you should have your tubes tested by a reliable radio dealer.

Of course, you must bear in mind the fact that the coming of warmer weather decreases distance reception very greatly but if your apparatus is performing well at all you should have no difficulty in picking up the more important stations like KDKA that are not so distant from you.

UV-199 dry cell tubes are quite variable, some lasting a long time and others becoming used up in a very short time. A test will show you at once which of them are still in good condition. Be sure to buy a recognized make of tube when you make such replacements. The dealer's test should not only consist in his trying the tube in a set but also in measuring the plate current with a tube testing instrument. This should show a current of around three to five milliamperes for a good tube.—B. F.

What Is Wrong?

Can you tell me what is wrong with my radio? We have had it only about four weeks. The aerial is fastened to a locust tree, is about thirty-five feet high where fastened and about twenty feet high at house. The aerial is 100 feet long. We have three ground wires, one fastened to the pump, one in the cellar and one outside near the lead-in wire. This last one is of hollow pipe and we fill it with water. It and the ground wire in cellar is several feet in the ground. We can get only one station clear in the daytime and that not always. In the evenings any stations we get are not loud enough to be heard, or if they are, they are not clear. The music sounds tinny or out of tune. We must turn the two batteries two-thirds of the distance around and the amplification to from six to eight to get any station. We have quite a few trees around and small mountains (the South Mountains) about one and one-half to two miles from us. Does that make any difference? We thought it was the loud speaker, got a new one, but does not make much difference. Now, I know this radio will get stations, for at first we got New Orleans, Miami Beach, Montreal, Cuba, and many nearer stations and these were good and clear. There are no wires near except R. R. about 150 feet away. We live on a hill and there are no radios nearer than one-half mile. We have new copper wire aerial. Had aerial fastened to barn, about twenty-five feet farther away than now, but did not do as well as now.—L. A. D., Adams County, Pa.

I appreciate the completeness with which you have presented your radio query to Pennsylvania Farmer.

Inasmuch as your radio set operated well originally it is doubtful whether your ground is at fault. However, you can make a better one by burying a strip of coarse copper screen about two by six feet in a trench at least two and one-half feet deep, preferably in a moist place. Solder your ground wire all along one end of the screen.

Have Dealer Test Tubes

If the tubes are not new, have them tested by a reliable radio dealer. You should also test your B batteries with a voltmeter. It might be necessary to install new dry cell A batteries. Hence test your A batteries also.

The mountains may hinder reception from stations in their direction. It would help considerably if you could increase the height of your aerial so as to make it higher than nearby trees. You should be able to have it more than twenty feet from the ground at the house. The railroad is too far away to cause any trouble.

In most cases, troubles such as you mention will be found in defective tubes and run-down batteries.—B.F.

Can't Get Below 400 M

I can't get any stations with my set lower than 400 M. They are loud and clear. Last fall I could get Pittsburgh and other stations but nothing below. My brother has a set like mine with C battery. He can get stations as low as seven on the dials. I can't get anything of any account below forty. Would a C battery improve this, or what would you recommend?—S. A. B., Berks County, Pa.

It would have assisted us greatly in answering your radio question had you given more information on the actions of your set when you attempt to tune in stations lower than 400 meters. If you find a great deal of whistling below 400 meters it is possible to improve on the operation of the set by having a radio repairman install a neutralizing condenser. Sometimes the aerial in use is too small and in that case a larger aerial would, by its absorption power, prevent the oscillation or whistling and permit the desired reception.

Exchange of Tubes May Help

Often, the exchange of tubes, so as to install a tube in the radio frequency socket of different characteristics, is sufficient.

The C battery would prove of no avail, since this is useful solely to improve the output sound of the set and has no effect on the tuning.

The very best scheme would be to write to the service department of the firm who made the set and state your difficulties. They will no doubt be glad to take in the set and make whatever adjustments are necessary for a small charge. This would be preferable to taking the matter up with a radio dealer or repairman and would certainly cost less.—B. F.

He who plants an oak looks forward to future ages, and plants for posterity. Nothing can be less selfish than this. He cannot expect to sit in its shade nor enjoy its shelter; but he exults in the idea that the acorn which he has buried in the earth shall grow up into a lofty pile, and shall keep on flourishing and increasing, and benefiting mankind long after he shall have ceased to tread his paternal fields.—Washington Irving.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Dept. 512, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept., 512, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Walker Remedy Co., Dept. 512 Waterloo, Iowa

3 Master Keys 50c

Work troublesome door locks; replace lost keys; practically as SERVICEABLE as a whole bunch of ordinary keys. Used by thousands of house-owners, tenants, contractors, janitors, keysmiths, police officers, secret service, firemen, hotels, real estate men, etc. Especially serviceable and convenient for household use. Set of three (small, medium and large sizes) sent postpaid on receipt of 50 cents. (Stamps or coin.) Handsome combination Key Holder, and Key Ring included free.

LOS ANGELES, CALIF.

The Fords of the Mail Order Business

NOTE—Orders for two sets or more will be sent C. O. D., on request, without extra charge.

Your house needs paint *now* IF—

The Dutch Boy trademark is on every keg of Dutch Boy white-lead. It guarantees your getting lead paint of the highest quality. In addition to white-lead, there are also made under this trademark: flatting oil for use with white-lead in decorating interiors; also red-lead, solder, and babbitt metals.

IF the paint film has worn down thin, or if the paint film has broken, decay and deterioration threaten your house and other farm buildings, and they need painting, NOW! They need a covering of an all-lead paint made of Dutch Boy white-lead and pure linseed oil. This lead paint covers farm buildings with a moisture-proof film that is tough and elastic, and will not crack or scale.

If your farm buildings look old and worn, if they have begun to drop in value—they need Dutch Boy white-lead paint, NOW! A covering of Dutch Boy white-lead paint makes any farm building better-looking, more valuable to all who see it.

Dutch Boy white-lead paint is economical, reasonable in price. The economy of this paint lies in its durability, which saves the cost of many repairs and frequent repaintings.

Write for new paint booklet

"Decorating the Home" is a new free booklet, illustrated in color, which suggests decorative treatments for exteriors and interiors. It will be sent you, along with a booklet that gives complete directions for painting wood, plaster, metal and masonry about the farm, if you will write our nearest branch for Booklets F.

Eggs—28@30c per dozen.

Poultry—Hens, 24@28c; dressed, $1@$2.50 ea.

Vegetables—Potatoes, 25@50c ½ pk, $2@3.50 bu; cabbage, 10@20c hd; lettuce, 10@20c hd; celery, 8@20c stalk; carrots, 3@5c ea; horseradish, 5@10c glass; onions, 10@18c box; beets, 1@5c ea; soup beans, 10@15c pt; lima beans, 35c qt; spinach, 25c ¼ pk; turnips, 8@10c box, 12@15c ¼ pk.

Fruits—Apples, 10@25c ¼ pk, $1.25@3 bu; strawberries, 60c qt.

Retail Grain Market—Wheat, $1.90; corn, $1; rye, 90c; oats, 65c; bran, $1.90 cwt; middlings, $2.25 cwt.

Wholesale Grain Market—Wheat, $1.68; corn, 72c; rye, 80c; oats, 50c; bran, $36 ton; middlings, $40 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 43@44c; do, choice, 42@43c; do, good, 41@42c; do, prints, 44@46c; do, blocks, 43@45c; do, ladles, 34@36c; Md and Penna, rolls, 32@35c; Ohio and West Va, rolls, 32@35c; store-packed, 32c; Md, Va and Penna, dairy prints, 32@35c; process butter, 39@40c.

Eggs—Market slightly firmer; nearby fresh-gathered firsts, 3 sales, 125 cases, 29½c; 4 sales, 175 cases, 29¾c. Closing offerings, nearby fresh-gathered firsts, 30c; bid, 29½c. Quotations, fresh-gathered firsts, free cases, all sections, 29½@29¾c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 30c; 3½@4 lbs, 29@30c; Leghorns and other light fowl, 27@28c; old roosters, 20@22c; young chickens, large size, fat, 38@40c; Leghorns and other light stock, 30@34c; springers, 1½ lbs and over, 54@55c; springers, white Leghorns, 48@50c; all kinds, poor and thin, 30@32c. Ducks, White Pekins, 35@36c; muscovy, young, 34@35c; puddle, 33@35c. Geese, nearby, 24@26c; Kent Island, 26@28c; western and southern, 22@24c. Guineas, young, large, 75@85c; old, 35@50c. Pigeons, young and old, pair, 25@30c.

CHICAGO LIVESTOCK MARKET

Cattle—Receipts, 800 head. Compared with week ago: Fed steers, mostly 25c lower; lower grades and stockers and feeders showing maximum decline; few good and choice steers steady; fat she stock, 25@50c lower; canners and cutters steady; bologna bulls weak to 15c lower; vealers, 50c@$1 higher; extreme top fed steers, $10.65 paid for yearlings, mediumweights and heavies; light yearling heifers upward to $10.10.

Hogs—Receipts, 3000 head; uneven, 10@25c lower; bulk, 240@326-lb butchers, $10.90@11.50; majority desirable 200@225-lb weights, $11.80@12.25; good and choice, 190 lbs down, $12.50@13; top on 150@160-lb averages, $13; packing sows, $10.35 down; sorted killing pigs up to $13.25; heavyweight hogs, $10.80@11.55; medium, $11.50@12.45; lights, $11.75@12.85; light lights, $11.80@13; packing sows, $9.90@10.35; slaughter pigs, $12.75@13.25.

Sheep—Receipts, 6000 head. Compared with week ago: fat lambs, 50@75c lower; yearlings, 25@50c lower; fat sheep firm; scarcity of sheep supplies supporting weighty fat lambs. Tops for week: Fat lambs, $14.35; shearing lambs, $13.75; fat yearlings, wethers, $12; aged wethers, $10; practical top on fat ewes, $9; odd lots, $9.10@9.25.

NEW YORK MARKETS

March 29, 1926.

PRODUCE

Butter easy; receipts, 9871 tubs; creamery, higher than extras, 40¼@42c; do, extras, 92 score, 41c; do, firsts, 88@91 score, 39¼@40½c; packing stock, current make, No 2, 35c.

Eggs unsettled; receipts, 27,786 cases; fresh gathered extra firsts, 30@30½c; do, storage packed, 31@31½c; fresh gathered firsts, 28½@29½c; do, storage packed, 30@30½c; fresh gathered seconds, 27½@28c; nearby hennery whites, closely selected extras, 40@41c; nearby and nearby western hennery whites, first to average extras, 33@39c; nearby pullets, 32@33c; nearby hennery browns, extras, 34@38c; Pacific Coast whites, extras, 39@40c; do, firsts to extra firsts, 33@38c.

Cheese easy; receipts, 94,989 pounds. State, whole milk, flats, fresh, fancy to fancy specials, 22@22½c; do, average run, 21@21½c; state, whole milk, flats, held, fancy to fancy specials, 27@29c; do, average run, 26@27c.

Live Poultry unsettled; chickens, by freight, 28@33c; do, by express, unquoted; broilers, by freight, 50c; do, by express, 50@60c; fowls, by freight, 28@30c; do, by express, 29@33c; roosters, by freight, 16c.

Dressed Poultry steady; chickens, frozen, 28@47c; fowls, fresh, 27@37c; do, frozen, 26@36c; old roosters, 22@29c; turkeys, fresh, 42@54c; do, frozen, 42@60c.

LIVESTOCK

Cattle—Receipts, 1050 head; steady; steers, $7@10.10; state bulls, $4@6.35; cows, $2.75@6.

Calves—Receipts, 950 head; steady; veals, common to prime, $7@17; culls and little calves, $6@8; grassers and fed calves, $5@8.

Sheep and Lambs—Receipts, 700 head; steady; sheep, $3@8; culls, $2@3; lambs, common to prime, $10@14.25; do, clipped, $11@12; culls, $8@10.

Hogs—Receipts, 670 head; steady; light to medium weights, $13.25@14.25; pigs, $14.50@14.75; heavy hogs, $12.75@13.25; roughs, $10.25@10.75.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment: City bran, $32.50; middlings, $32.50, in 100-lb sacks; red dog, $40; nominal, in 100-lb sacks; western spring bran, $31.10; standard middlings, $31.60; flour middlings, $35.10; red dog, spot, 39.10, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.50, all in 100-lb sacks; cottonseed meal, 36 per cent protein, $39.25; prompt shipment linseed oil meal, $50.10, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 2, $26@28; No 3, $22@25; sample, $14@18. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.90¼; No 1 dark spring, c i f, domestic, $1.85¼; No 2 hard winter, f o b, export, $1.84⅛; No 1 North Manitoba, in bond, f o b, export, $1.74; No 2 mixed durum, f o b, export, $1.56⅛. CORN, No 2 yellow, 87¾c; No 3 yellow, 84¾c. OATS, No 2 white 50c; No 3 white, 49c; No 4 white, 47½c; ordinary white, clipped, 49½@51½c; fancy white, clipped, 52½@54½c. RYE, c i f, export, 98c. BARLEY, malting, c i f, domestic, 81¾@84¾c.

WOOL MARKET

Boston, March 27, 1926.

Domestic—Ohio and Penna fleeces: Delaine, unwashed, 47@48c; ½-blood combing, 46@47c; ⅜-blood combing, 46c; fine unwashed, 42@43c. Mich and N Y fleeces: Delaine, unwashed, 45c; ½-blood combing, 45@46c; ⅜-blood combing, 46c; ¼-blood combing, 45c; fine unwashed, 40@41c. Wisconsin, Missouri and average New England, ½-blood, 42@43c; ⅜-blood, 44@45c; ¼-blood, 44c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, March 27, 1926.

Cloverseed, cash, domestic, $21; imported, March, $14.40 bid; October, $15.65. Alsike, cash and March, $17. Timothyseed, cash and March, $3.55; October, $3.60.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, March 29. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran ....$	32.50
Spring bran	31.50@32.00
Soft winter wheat bran.....	33.50@34.50
Hard winter wheat bran....	32.00
Standard middlings	31.50@31.75
Soft winter wheat middlings	32.20@36.50
Flour middlings	35.00@38.50
Red dog flour	39.00@41.00
White hominy	30.50@31.00
Yellow hominy	30.50
Gluten feed	35.75@37.85
36 per cent cottonseed meal..	37.50
41 per cent cottonseed meal..	39.00@39.50
43 per cent cottonseed meal..	40.75@41.50
34 per cent linseed meal.....	49.75@50.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

SUPPLIES of Florida strawberries were heavy on March 27 with four cars offered. This was the largest number of cars offered on the Philadelphia market on any one day this season, and prices dropped sharply to 35c per quart, according to the Pennsylvania and Federal Bureau of Markets.

The strengthening of the potato market was the feature of the week and the market closed strong with Pennsylvania round whites selling at $7.50@7.75 per 150-pound sack, compared with $6.75 to $6.85 a week ago. This condition was due to a much stronger tone at shipping points and consuming markets in all sections of the country. There were some fancy Maine Spaulding Rose on the Philadelphia market that brought $8.00 per sack.

Onions were rather dull during the week and most of the offerings were of ordinary quality and condition. Spinach held about steady during the week and not a fair demand at the close. Pennsylvania mushrooms were dull thruout the week and supplies have been liberal, partly on account of the warmer weather.—W. R. W.

Butter Markets

THE butter markets during the week ending March 27, were very nervous and unsettled. Trading was marked with caution on every hand and on all markets was very unsatisfactory. Receivers in most instances pressed goods for sale on arrival while jobbers and distributors operated close to immediate requirements. Confidence was almost entirely lacking and the least accumulation of stocks resulted in a weakening of the markets.

Generally speaking, there was no definite trend to the situation but sentiment in most quarters appeared to favor lower prices. On Wednesday a steadier tone was indicated due to a slightly heavier buying demand but trading was hardly well started before it became apparent that stocks would not clean up at the current level of prices and the market was again in buyers' favor.

County News and Comment

Berks County, Pa.—March has been very hard on wheat, rye, alfalfa and grass fields. It was too cold and there was no snow to cover them. Many of the plants look dead and it may take some time till we see real life in these fields. The spraying of apple trees is the work of many farmers at present. Manure hauling is closely followed so as to be ready to plow when the ground is in condition to handle. Spring sales are all over. Moving time has started and will continue for about ten days. Spring chicks can be found on many farms. Small pigs very scarce. Eggs sell at 27c; butter, 55c; wheat, $1.60; oats, 50c; corn no sale and no price.—W. N. M., March 24.

Carroll County, Md.—March has been fairly cold and some rough days. Winter stayed cold all way thru, therefore, grass is still brown and wheat fields still retain their reddish brown color, while barley also has a winter color. Winter grains are all backward for this time of year. Farmers busy hauling manure, cutting wood, hauling corn to market, preparing wormseed beds and on calm mornings sowing clover seed. A great deal of sweet clover is being sown this spring. Early sown sweet clover gives best stand and April sown seed gives poor stand. Not as many farm sales as usual but livestock and equipment are bringing good prices. Very few young horses in this section. Farmers have let up on their horse breeding operations. Hogs and dairy cows are also scarce and high, grade cows selling at public sales from $100 to $179 per cow. The big corn crop with cheap corn is helping to cause a demand for cows and hogs. T. B. testing helped cause a scarcity of dairy cows. Local elevators are receiving more corn than they want. It is rumored that elevators are about to cut price in hopes of discouraging marketing of corn.—H. I. R., March 19.

Front-Door Markets

PENNSYLVANIA has 150 cities of 5000 to 25,000 population, almost twice as many as any other state, and within her borders dwell one-twelfth of all the people in the United States. Markets for the products of her farms, orchards and gardens are, therefore, front-door markets, with no thousands of miles or territory to traverse such as confronts the farmers of Minnesota, Washington and California.—Weekly News Bulletin, State Department of Agriculture.

Chautauqua County, N. Y.—Butter is ranging around 45c to 50c and cows are selling well, when they sell at all. A fresh cow sold at auction here this week for $75. Potatoes, $2@2.25 out here and $2.50@3 in the city (Jamestown) but the price is dropping as it warms up. Apples are too scarce to have any price. Eggs have dropped to 29c and are still dropping. Poultry brings 22@23c, live weight.—E. M. A., March 22.

Chester County, Pa.—March has been extremely cold up to within the past few days. The farmers have been hauling manure and getting the summer wood supply ready. The big puzzle to many farmers is the amount of potatoes to plant this year. With good seed potatoes about $4 per bushel and the uncertainty of the ruling price next fall there is a tendency of decreased acreage in this section of the county. Potatoes for table use are about $2.50. Eggs plentiful with price about 30c. Spring plowing will start as soon as the frost is out of the ground.—F. H. G., March 22.

Dauphin County, Pa.—Weather has been fair for the past week, snow almost all gone. Dirt roads are becoming better. Grain fields look poor because of weather conditions. Spring farm work is beginning. More poultry will be raised this year. Public sales are well attended. Prices are good. Very much sickness thruout the county this month. School attendance poor. Prices for products: wheat, $1.70; corn, 70c; oats, 50c; potatoes, $2.85; eggs, 28c; butter, 60c.—I. F. M., March 20.

Lawrence County, Pa.—Winter is passing, spring nearly here. Supervisors are busy filling in the bad spots on the roads with slag. Wheat and rye look bad, too much freezing since the snow went off. In low ground there are many spots minus a showing of green. Fresh cows are in demand. Prices $100 or more. Hogs very scarce and high priced. Sheep industry is growing. Not much activity in real estate. Some few sales of livestock advertised for late March and early April. Timothy hay in demand at $15.50; clover hay, $18; ear corn, 40c; butter 50@60c; eggs, plentiful, 35@45c.—M. L. V., March 22.

Lehigh (Upper) County, Pa.—Spring is here. Farmers busy during the last few weeks chopping wood for fuel during the summer and pruning trees. No plowing has been done so far. The setting of hens, care of little chicks, getting the brooder and incubators in shape, are the jobs on many farms. Roads are in a very bad condition. Very little hauling done. Potatoes are being shipped at $2.40 but haulings are light. There is a great scarcity of small pigs and shoats. Very high prices are realized for same.—Wheat, $1.60; corn, 80c; rye, $1; potatoes, $2.40; eggs, 26c; butter, 42c; hogs, slaughtered, 17c.—G. J. R., March 22.

Union County, Pa.—Farm sales are nearly past. Cows tested for T. B. sell well; shoats sell up to $20 or at 20c a pound and hens are bid to 32c cash and no discount. Farm horses are selling low, considering age of most horses in the county and that there are fewer of them. Testing in Union and Buffalo townships is on the go this and last week, and this interferes with sales and movings which will occur almost daily for the next ten days. Some wheat is being marketed at $1.70 for a local miller who is able to pay more than market price on account of his flour trade. Some oats are changing hands at 40c in a small way, and several crops of corn have been sold at 70c, but theer is very little market for these grains at the prices named. Trees are being trimmed so as to be ready for the sprayings soon to follow. Several carloads of certified seed potatoes have been ordered and fertilizers for spring crops are being hauled home. Clover seed has been ordered, and preparations for spring work are going on as fast as the season allows. Some manure has been hauled to fields when the ground is in condition for such work. Some corn for seed has been sold by growers for shipment to a seed firm which has been getting good seed corn in the county for some years at an advance over the regular market price. Very few farms are changing owners this spring.—J. N. G., March 24.

Scranton Receipts

DURING 1925 a total of 4193 cars of fruits and vegetables were received in Scranton, according to the Pennsylvania Bureau of Markets. This figure shows a decrease of 481 cars from the 1924 business which amounted to 4674 cars. The bureau reports that 35 commodities were received in carlot quantities from 34 states, from Canada, and from several of the Central and South American countries.

California furnished the heaviest receipts by supplying 767 cars of fresh fruits and vegetables, New York state stood second with 662 cars, and Florida ranged third with 351 cars.

The receipts of potatoes dropped from 976 cars in 1924 to 893 in 1925, but this commodity still shows the heaviest receipts. Banana receipts rank next with a total of 669 carloads. Pennsylvania and New York furnished 493 cars of the potatoes received as compared to 467 cars from these sources in 1924. The trend of the Scranton trade is to purchase more of the late potato supply each year from nearby potato producing sections.

The grape receipts show a sharp decrease, dropping from 467 cars in 1924 to 372 cars in 1925, which can probably be accounted for in the fact that the arrivals occur principally in the fall of the year at which time all business was slower on account of the coal strike. Apple arrivals fell off heavily as is shown by the receipt of 142 cars in 1925 as compared to 252 cars in 1924. New York state shippers took most of this loss of business since receipts from that source dropped from 122 cars in 1924 to 41 cars in 1925. Pennsylvania growers supplied 28 cars of apples, 3 cars of grapes, 10 cars of peaches, 1 car of pears, and 173 cars of potatoes in addition to the large quantities of locally-grown produce marketed by motor truck.

The carlot receipts for Scranton for the year 1925 are: apples 142, bananas 669, beans 5, beets 12, cabbage 134, cantaloupes 141, carrots 20, cauliflower 6, celery 124, cherries 1, chicory 19, cranberries 5, cucumbers 87, endive 2, grapefruit 69, grapes 372, horseradish 1, kale 10, lemons 37, lettuce 83, mixed produce 162, onions 171, oranges 280, peaches 188, pears 69, peppers 39, pineapples 18, plums 33, potatoes 893, spinach 28, strawberries 67, sweet potatoes 58, tangerines 3, tomatoes 130, turnips 31, watermelons 84.

Prices and Prospects

THE New York egg market was more active during the week ending March 24, due in part to the Easter and Passover trade. Buyers wanted fancy large white nearby eggs and prices were higher on these kinds. Receipts of the better grades have been hardly sufficient to satisfy trade requirements. Cheaper grades moved well during the early part of the week but lagged somewhat toward the close. There was a shortage of strictly fancy brown eggs and these were bringing little higher prices. The Philadelphia market was also more active and prices advanced slightly at the close.

The live poultry market in New York was irregular during the week. Buying was fairly active for heavy fowl, while light stock was draggy. This was due to the approach of the Jewish holidays. Only a few chickens were arriving in the cars. Capons met a strong demand and broilers were fairly active. Express broilers were rather quiet. Dressed poultry was in light receipt and prices averaged higher.

Potato Markets Firmer

The eastern potato markets developed a firmer tone during the early part of the week ending March 27 in sympathy with the advance at practically all of the shipping points. Prices advanced and trading was more active: A total of 140,984 cars of old potatoes had been moved by March 20, compared with 145,362 last year. Shipments of new potatoes were much lighter than last year with the total this season being 20 cars, compared with 158 in 1925.

The best grades of hay averaged slightly higher in the interior markets during the week ending March 20, but good pastures were curtailing the demand for hay on the Pacific Coast. Ordinary hay continued to sell slowly at most markets. Timothy hay was generally firm. The Boston market was steady and dealers were forced to lower prices in order to move the poorer grades. Heavy receipts resulted in a weak condition in Pittsburgh. Arrivals at New York were below current needs and all grades sold well at generally higher prices.

Grain Markets Weak

The grain market weakened and prices of practically all grains made sharp declines. The foreign demand for wheat was lighter and the domestic demand was of small volume. The weather was favorable for the development of the winter wheat crop in this country and this further contributed to the weakness of the market. Corn prices dropped sharply and while oats did not decline as much per bushel as other grains, the market was weak.

The movement of new crop onions from Egypt to this country has begun and at this time there are about 47,500 bags, or about 95,000 bushels on their way to our markets. The Egyptian crop previously had been reported as being late but the first cargo is expected to reach the American markets a little ahead of last season's first arrivals.

Trading on the Philadelphia butter market during the week has shown little improvement over that of the previous week. While at times a small amount of speculative support was in evidence this was rather sporadic and buying for the most part was confined to meeting immediate requirements.

Production appears to be holding up well thruout the western territory, as evidenced by reports from creamery organizations. The general average is estimated from fifteen to twenty per cent above last season. This is emphasized also by consistently heavier receipts of butter at the large markets.

The Philadelphia market on 92 score butter closed at 41½c on March 24, a net decline of two cents during the week. This grade was also quoted in New York at 41½c with Chicago 92 score ruling firm at 39½c. Ninety score at Philadelphia was quoted at 40½c with Chicago Standards quoted at 39½c.—W. R. Whitacre.

Produce for Erie

A TOTAL of 830 cars of fruits and vegetables was received in Erie during 1925, according to a report of the Pennsylvania Bureau of Markets. This was a gain of 21 cars over the 809 cars used in 1924. There were 21 commodities received in carload lots from 27 states of the country and from several foreign countries. In addition, 45 cars of mixed produce were received, which had been made up of various small lots of scarce, out-of-season fruits or vegetables, and generally shipped to Erie from the Pittsburg produce yards.

There were 140 cars of bananas used in Erie during the year. Oranges, the nearest competing commodity in volume, showed receipts of 103 cars. The cars of bananas originated chiefly at the port of New York. California supplied 94 cars of the total receipts of oranges.

Potato Receipts Drop

The receipts of potatoes dropped from 114 cars in 1924 to 81 in 1925. There was only one car of late potatoes brought into the city during the year, and that one from New York state, as compared to 16 cars of late stock used in 1924, which fact very clearly indicates that the nearby Erie County potato growers are keeping out competing stock from distant producing sections.

Watermelons, cabbage, and grapefruit receipts were equal in number for 1925 and 1924, with receipts of 63, 19 and 18 cars respectively. Apple receipts declined sharply in dropping from 62 cars in 1924 to 26 cars in 1925. New York state apple shippers sustained most of this loss of business since there were only 5 cars of New York apples used in Erie in 1925 as compared with 36 from the Empire State used in 1924. Apparently the apple growers situated within trucking distance of Erie supplied more liberal quantities of their fruit to the trade, which would account for the lighter demand for apples shipped in from more distant points by rail. Sweet potatoes showed a phenomenal increase in receipts by jumping from 7 cars in 1924 to 39 cars in 1925. This increase in consumption is accounted for by the fact that sweet potatoes were more liberally used in Erie as a substitute for white potatoes during the past fall, because of the high price of the latter.

For Concrete Cistern

In what proportions should I mix the cement, sand and gravel for a concrete cistern?—A. J., Lancaster County, Pa.

The materials for making a concrete cistern should be clean and thoroly mixed to the proportions of one part of cement, two parts of sharp sand and three parts of hard stone not over one inch in diameter. It is not advisable to use too much water in the mixture and when the job is finished the newly made concrete should be kept covered to avoid the water evaporating too freely.—N. S. G.

Reliable Day-Old Chick Hatcheries

FOR YEARS WE HAVE HATCHED AND SOLD SATISFACTORY CHICKS

Planting the Farm Woodlot

(Continued from page 3)

already nearly dead, only to wonder later in the summer why the tree didn't live. Not all the trees are equally fitted to survive. In any seed bed there will be some that should not be planted. They might come all right if placed in garden soil for a year or two to get a better start, but are not very likely to come thru in good shape if set in the field.

The men who dig and bundle the trees seldom sort out the poor ones; they let them stay in, making sure, of course, that there is the requisite fifty, or hundred, as the case may be, of good trees to the bundle. If the roots are badly torn, or the bark "slips" under the fingers and the inner bark looks dark instead of bright, then you are taking a big chance if you plant the tree.

Correct Spacing Undecided

There is a good deal of disagreement among foresters as to the best spacing for trees so we can scarcely wonder if a feeling of uncertainty is found among tree planters. It is desirable that a complete cover be formed as soon as possible. Nature often seeds up land prodigally. Lodgepole pine in the Rocky Mountains may be so thick that at sixty years of age the average living tree is not four inches in diameter, and every live tree is entirely surrounded by dead ones which stand so close that they cannot fall down after they have died. The live trees, however, have rid themselves fairly well of their lower branches and are now in a position to put on wood which when sawed will make a higher percentage of the better grades of lumber.

The opposite extreme is found in the case of a tree growing out in an old pasture. Such a tree is often as broad as it is tall; the branches almost touch the ground, and continue to grow for a long time; the trunk is short, and the tree almost worthless for sawlogs. Unquestionably, entirely aside from the element of cost, close planting, even two feet, would be desirable, with early thinning of the resulting stand. But trees and labor cost money. Taking everything into consideration then, it seems wise not to try to plant closer than six feet by six feet, except in certain cases and with certain species, where the extra trees can be sold at ten years of age or a little younger for use as Christmas trees.

Didn't Make Up for Carelessness

One man was found last spring who thought he could make up for careless planting by close spacing. He was planting a large number of trees. His men were not cutting the sod, but were only cutting back a piece of sod, putting in the tree, and tramping the lump of material back in the hole. The men were making a record as to number of trees planted but they were spacing them three feet apart each way, and consequently the number needed per acre was four times as great as with six-foot spacing. The close spacing was supposed to take care of all trees that would die without the necessity of replanting. But that isn't the way the thing works out.

Where all conditions for the growth of trees are favorable, a large percentage will grow, and the resulting cover will be too thick. Where conditions are in the least unfavorable, a large percentage die, and the plantation becomes "spotty." This man's earlier plantings showed this, for he has gotten less than fifty per cent survival. A large number of planters average eighty-five per cent.

Poor planting cannot be compensated for by close spacing. It's a waste of trees and labor to try it. Whatever is worth planting at all is worth planting sufficiently well so that is likely to grow.

Pennsylvania Wheat

TEN Pennsylvania counties produced 12,815,693 bushels, or more than half of the state's total wheat crop of 22,719,953 bushels in 1925. In order of total production, these counties are: Lancaster, York, Franklin, Berks, Cumberland, Chester, Adams, Lebanon, Lehigh and Bucks.

Two factors determine the rank of the counties, as shown in the table below which was compiled by the State Department of Agriculture. One is the total acreage seeded to wheat and the other is the yield per acre. Lancaster County takes first place in both acreage and yield per acre. Chester County, on the other hand, ranks second in yield per acre but falls to sixth place in total production because of a smaller acreage.

District Adapted to Wheat

The adaption of Pennsylvania's "bread basket," the leading ten counties, to the production of wheat is evidenced by the fact that the average yield per acre of 22.9 bushels in 1925, is almost three bushels above the state average, and almost twice the 1925 United States' average of 12.7 bushels. The average yield per acre in only three states,—Nevada, Idaho and Washington,—was greater than that of these ten Pennsylvania counties.

The following table gives the ten leading wheat producing counties in order of total production, in addition to their acreage and the average yield per acre.

County	Total production	acreage	Yield per acre
Lancaster	2,838,330	100,650	28.2
York	2,286,900	94,500	24.2
Franklin	1,522,368	79,290	19.2
Berks	1,148,544	59,820	19.2
Cumberland	1,088,906	50,180	21.7
Chester	988,613	35,690	27.7
Adams	822,219	44,930	18.3
Lebanon	755,055	32,130	23.5
Lehigh	693,450	30,150	23.0
Bucks	671,308	27,740	24.2
	12,815,693	555,080	22.9

Careful handling of the trees gave a survival of eighty per cent in this plantation on a typical Pennsylvania hillside.

Get the Complete Story of CENTAUR TRACTORS

WRITE today for full information regarding this sturdy, compact "power plant on wheels" which is making farm work easier—more pleasant and more profitable—on farms in every section of the country. Just mail the coupon or drop us a postal for catalog which tells the complete story of this truly remarkable low-cost, small-size, big-job tractor.

There is almost no limit to the jobs the sturdy CENTAUR can handle. It will plow 7 inches deep in heavy sod. On a small farm it will handle all of the field work—plowing, harrowing, seeding, cultivating, mowing, etc. Unequalled for cultivating corn—either over the row or between the rows.

If you want a dependable farm tractor—one that is low in cost and inexpensive to operate and that is good for years of trouble-free service—*get the Centaur.* It is a stay-on-the-job profit-maker for both large and small farms.

Get the complete story. The low price, the low cost for fuel and the unfailing dependability of this sturdy tractor, as proved by six years of field service, make it a real money-making labor-saver for you. Mail the coupon or letter today.

For White Diarrhea

In few hours, disease is stopped and sick chicks full of pep.

Stop losing chicks from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nearly every chick in every hatch, by this simple precaution.

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, will amaze you. Write for free sample, or send 50c for a full-sized package to **Burrell-Dugger Co., 656 Nelson St., Indianapolis, Ind.** It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Standard Seed Potato Grades

THE standard grades for seed potatoes in Pennsylvania (adopted March 15 and in force and effect September 15, 1926) are the following:

PENNSYLVANIA CERTIFIED SEED GRADE

This grade shall include only potatoes which have passed the field inspection requirements of the Bureau of Plant Industry.

Potatoes showing Black Heart, or excessive sweating, sprouting or shriveling, indicating improper storage, shall not be allowed in this grade.

This grade shall consist of potatoes of one variety which are practically free from dirt or foreign matter, sunburn, second growth, growth cracks, cuts, bruises, mechanical injuries, severe scab, severe insect injuries, or other defects, provided that the total of all potatoes showing such defects shall not exceed 2 per cent by weight.

The potatoes in this grade shall be free from disease or insect injury, provided that the following tolerances, by weight, are not exceeded:

Common scab—5 per cent of moderate infection.

Rhizoctonia (Black Scurf)—10 per cent of moderate infection.

Stem and discoloration—5 per cent.

Spindle tuber—1 per cent.

Powdery scab—No tolerance.

Wireworm injury—10 per cent, of which not more than half shall consist of moderate injury.

The potatoes in this grade shall be free from rots and freezing injury providing that a tolerance of 2 per cent is not exceeded:

The potatoes in this grade must comply with one of the following size requirements, providing that a tolerance of 3 per cent, by weight, above or 1 per cent below these size requirements is not exceeded:

"Standard Size"—minimum diameter 1⅞ inches, maximum weight 12 ounces.

"Small Size"—Minimum diameter 1½ inches, maximum diameter 1⅞ inches.

"Combination Size"—Minimum diameter 1½ inches, maximum weight 12 ounces, provided that at least 50 per cent by weight shall exceed 1⅞ inches in diameter.

PENNSYLVANIA FIELD CERTIFIED SEED GRADE

This grade shall consist of potatoes which have passed all field inspection requirements of the Bureau of Plant Industry, but which may not have been graded or sized according to the requirements of the "Pennsylvania Field Certified Seed Grade."

DEFINITIONS

1. "Dirt" refers to adherent mud, earth, or caked soil.
2. "Foreign Matter" refers to stones, vines, leaves, soil or other objectionable material.
3. "Sunburn" refers to greenish discoloration which will not disqualify if confined to small areas of the tuber.
4. "Second Growth" refers to the secondary tuber development which has caused misshapen stock.
5. "Growth Cracks" refers to growth fissures other than those which are shallow and well healed.
6. "Rots" refers to all dry and wet rots in any stage of development.
7. "Freezing Injury" refers to frozen tissue or tissue showing the effects of having been frozen.
8. "Moderate Injury or Infection"—In the case of Rhizoctonia, slight infection will be disregarded; the term "moderate infection" shall be construed to mean that less than five per cent of the surface is covered by Sclerotia.

In the case of scab, slight infection is disregarded; "moderate infection" shall be construed to mean surface scab, the aggregate area of which shall not exceed ten per cent of the area of the tuber.

In the case of wireworm injury, "moderate injury" shall be construed to mean from three to ten healed wireworm holes per tuber.

9. "Stem End Discoloration" refers to dark streaks in the flesh radiating from the stem, which penetrate more than one-quarter inch from the surface.

Light Up the Farm Home

THERE are still people who believe that hard work and more of it is the solution of all life's difficulties, despite the fact that the age of invention which arrived sometime during the last century has quite exploded the theory.

They do a hard day's work with old fashioned implements and think they are accomplishing as much as their neighbor who works less but uses modern equipment to help him. Old problems continue to handicap them, tho modern science has long since provided a solution.

Take the matter of light. It has been one of the major problems the race has had to contend with. The days have never been long enough, and the nights too long. Always there has been the need of more and better light. Man has struggled with it thru the ages, from the cave-dweller down. Now it is a simple matter. Yet the vast majority, at least of the rural population, might just as well be living in the days of our colonial ancestors so far as modern lighting facilities are concerned. Five million farm families are no better off than if carbide gas light or electricity had never been discovered.

Probably no one in this day and age, no matter how remote his farm may be, is dependent on wood shavings or a pine torch to light up his home. But the candle still flickers in some farmhouses, and the kerosene lamp still affords the only illumination for many a rural evening circle. Together they cause a vast number of farm fires, and are more responsible than any other factor for the eye trouble and poor sight which afflict farm children. Eye trouble is three times more prevalent on the farm than in the city.

Not the least depressing feature of it all is the extra burden thrown on the wife and mother, who, day in and day out, has to clean and trim and refill lamps, and carry them back and forth, wherever light is needed.

A Saving of Thirty-five Per Cent

Recently the Wisconsin College of Agriculture investigated the time required for various jobs under varying conditions, primarily to emphasize the importance of modern facilities. On one farm it was found that when a lantern was used for lighting, an hour and twenty-five minutes was required to stable the cows, clean mangers, weigh and feed grain, and feed silage and hay, while the same work done with modern lighting employed consumed only fifty-five minutes. The better lighting resulted in a saving of thirty-five per cent.

Professor Duffee, of Wisconsin, in describing the value of a lighting plant on a modern farm, stated that the average farmer who does not have adequate lighting facilities loses from two to four hours a day during eight months of the year, and the inference is that one year's saving on this item alone would more than pay for modern equipment.

KEEP Gombault's Caustic Balsam in your barn—ready for emergencies. For 42 years a reliable and effective remedy for Spavin, Capped Hock, Curb, Splint, Laryngitis, Thoroughpin, Quittor, Wind Galls, Poll Evil, Sprains, Fistula, Grease, Barb Wire Cuts, Calk Wounds, Shoe Boils.

WANTED—Farmer agents and prospective buyers write for illustrated catalog and terms on Celebrated International Silo with automatic-take-up-hoops. **International Silo Co., Meadville, Pa.**

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOG HAS NERVOUS SPELLS.—I have a German Shepherd (female) dog a little less than two years old. A short time ago she began lifting her left front leg every few minutes, and I thought she had hurt it one day when she fell from a car, but could find nothing wrong. Now it is much worse, as she cries with pain when she has these spells. Up until two days ago, she only had these in the morning, but now they come at night, and are very much like a spasm or fit. Her tongue gets almost black and she can hardly breathe. I have noticed that she does not have much strength in either her left front or left hind legs. These spasms or fits only last about ten minutes, but she is entirely exhausted when she comes out of them. I shall appreciate any advice which you can give me.—T. T., Coudersport, Pa. This dog should be given worm medicine to eliminate possible parasites. For such medication, it would be best to secure the necessary capsules from a qualified veterinarian. The diet should be watched and less carbohydrates fed. More meat in the dog's diet will serve to increase the vigor of the animal. One must be prepared for fatalities in such cases unless treatment is begun early.

PERVERTED APPETITE.—We have a cow that eats ground whenever she can get it. Can you tell me what she needs that makes her eat ground? At present she is bred. She is fed clover hay and corn fodder, silage, corn and oats chop, bran and dairy feed and sometimes oil meal. Gets plenty of salt.—J. L. McL., Milton, Pa. A good mixture to feed is made up of four parts steamed bone meal and one part common salt. A tablespoonful daily on feed may be used or the mixture placed where the cows may have access to it when turned out. This will probably supply the needed matter for the diet considering that you have such a variety in the ration.

CALF HAS LOST HAIR.—Have a Jersey calf about eight weeks old that has some kind of skin disease. Its hair over most of the back and neck is wet and comes off in large patches. About six weeks ago in attempting to prevent horns from growing I applied lye and burnt the skin badly on head. The trouble seemed to start there and has spread over most of the body. Calf seems in good health otherwise. Am feeding nothing but skimmilk with a little hay to pick at. Please advise thru your department.—J. B. C., Portersville, Pa. Try applying carbolized vaseline over the area involved, rubbing in carefully. Caustic sticks are usually used in controlling the growth of horns.

HORSES UNTHRIFTY.—I have two horses not in good shape. One passes much gas and much liquid with the gas. His voidings are in balls most of the time but he passes liquid with the voidings. He is an old horse, feed is oats and timothy hay. The other is also very gaseous but does not pass much liquid. Voidings look O. K. He had two very bad attacks of colic and some light ones. Feed: oats and bran and timothy hay. Please let me know what to do for them.—D. B., Gratz, Pa. You might try one pint of raw linseed oil as a drench repeating in two days. This tends to relieve the irritation of the intestinal tract. One handful of linseed oil meal once or twice daily in the feed will be of value. Regular exercise is advised.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

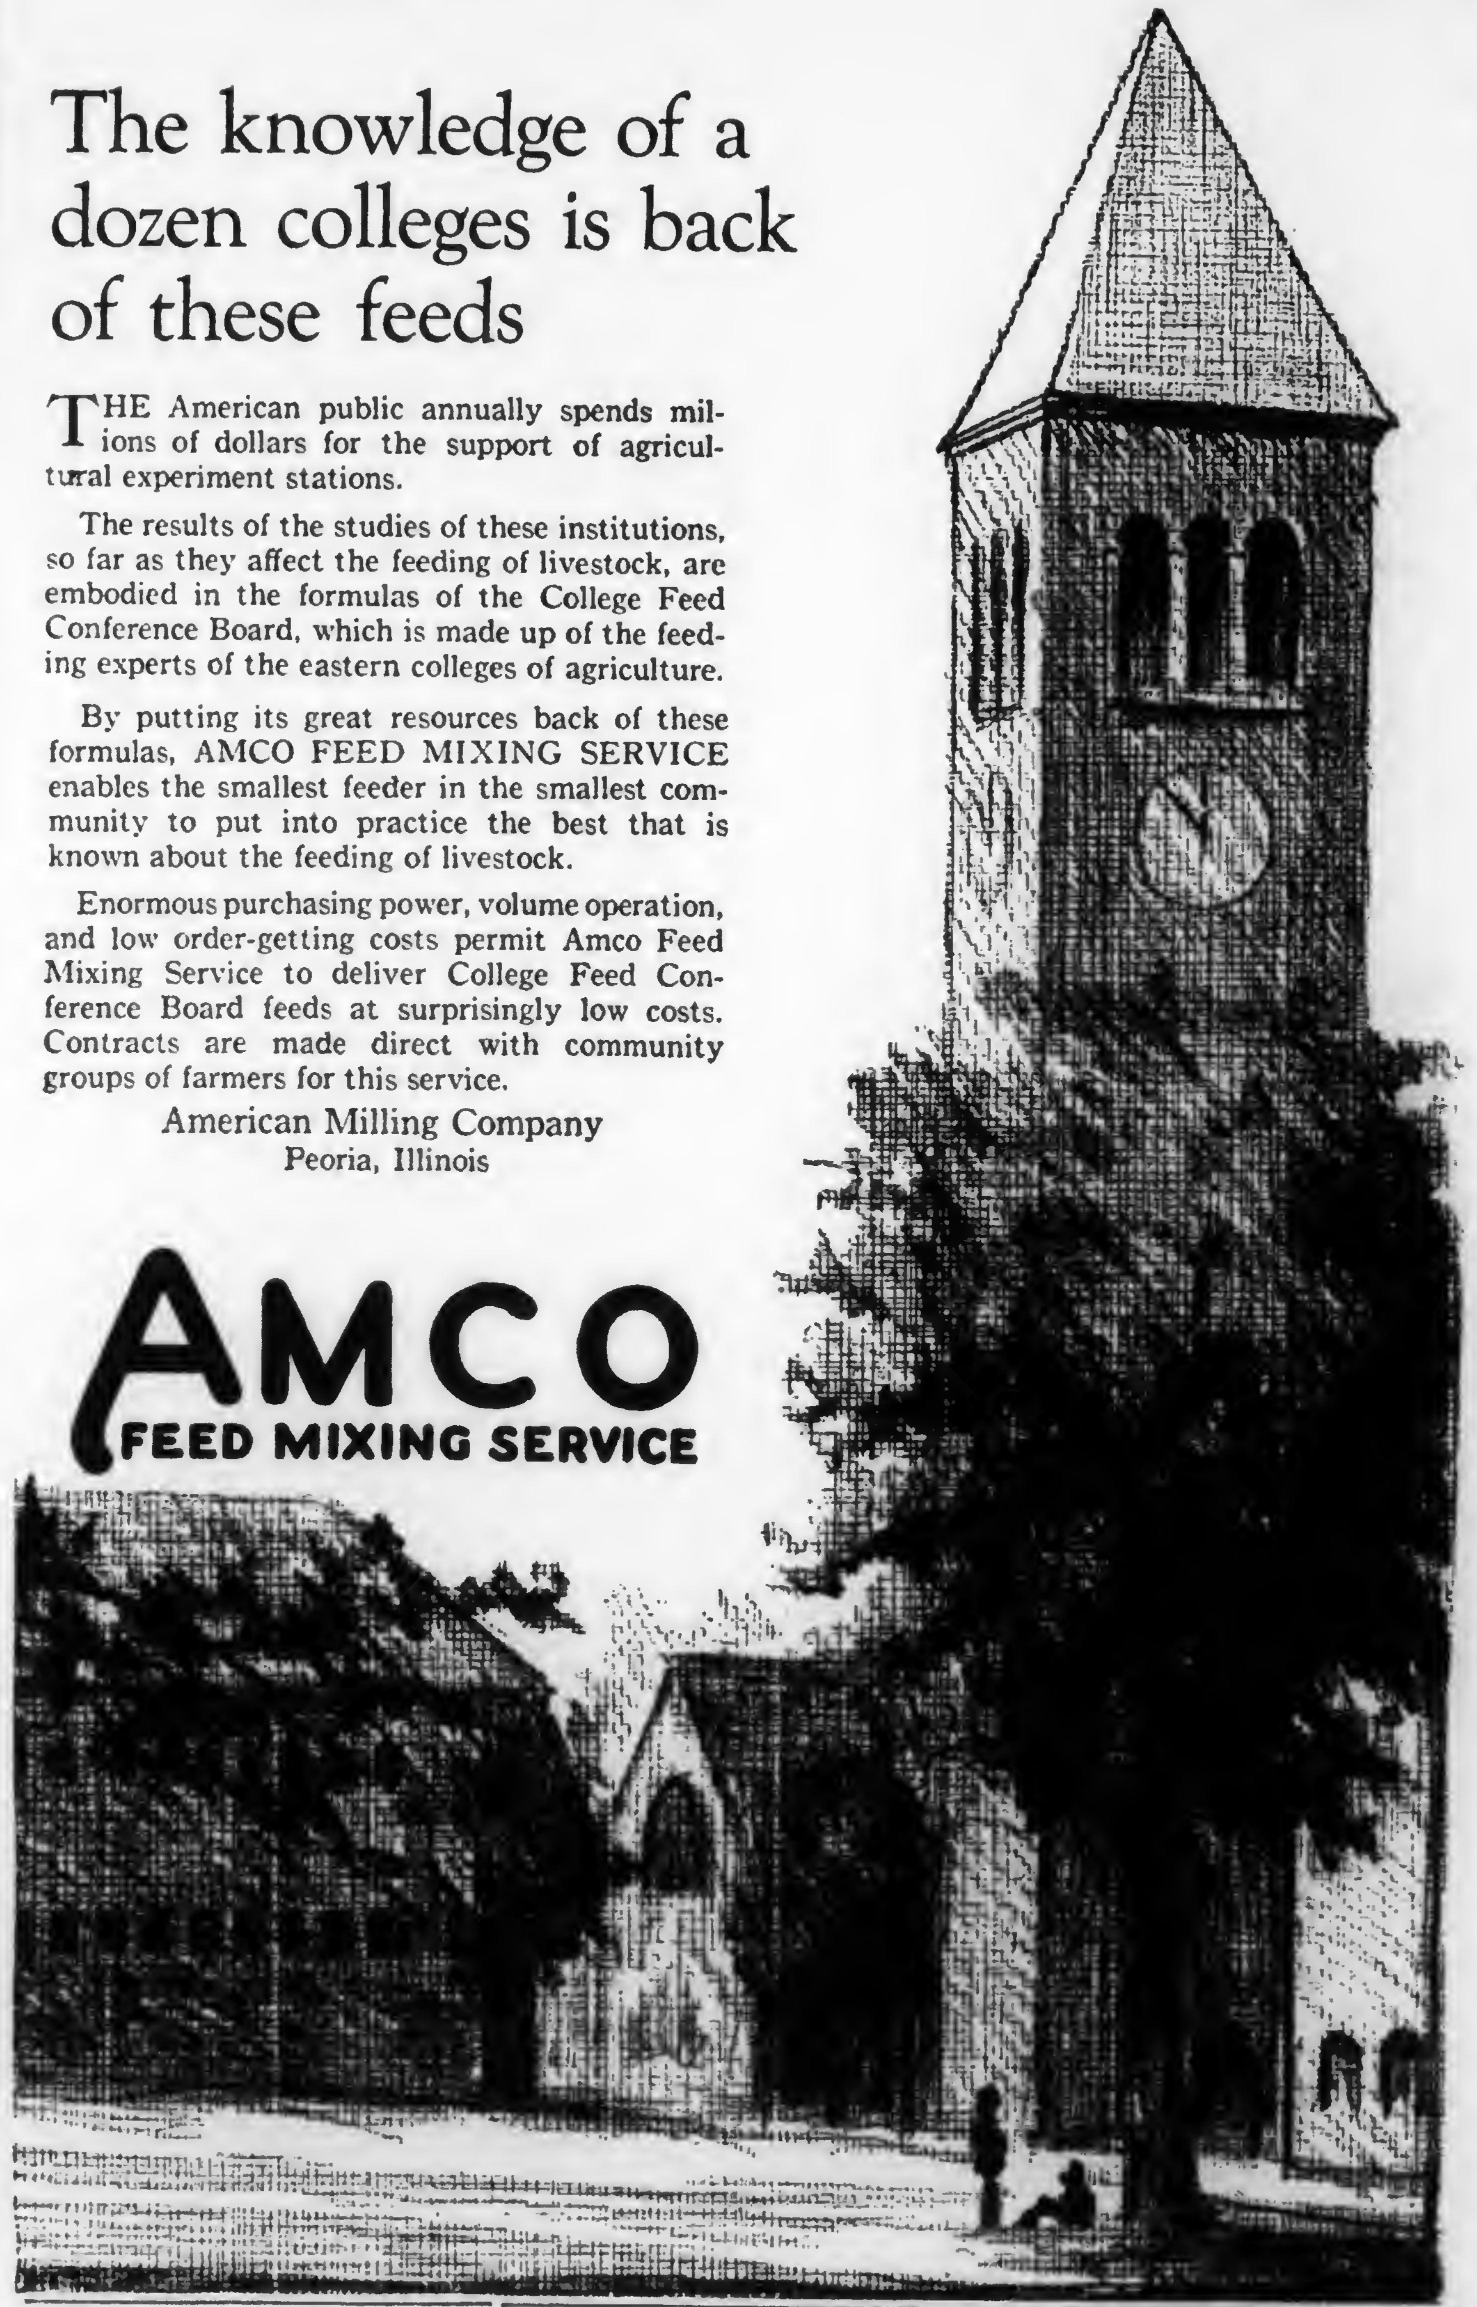
Dependable for Every Engine
Toledo, Ohio



The knowledge of a dozen colleges is back of these feeds

THE American public annually spends millions of dollars for the support of agricultural experiment stations.

The results of the studies of these institutions, so far as they affect the feeding of livestock, are embodied in the formulas of the College Feed Conference Board, which is made up of the feeding experts of the eastern colleges of agriculture.

By putting its great resources back of these formulas, AMCO FEED MIXING SERVICE enables the smallest feeder in the smallest community to put into practice the best that is known about the feeding of livestock.

Enormous purchasing power, volume operation, and low order-getting costs permit Amco Feed Mixing Service to deliver College Feed Conference Board feeds at surprisingly low costs. Contracts are made direct with community groups of farmers for this service.

American Milling Company

AMCO
FEED MIXING SERVICE

Ears of *"Lancaster County Sure Crop"*—a splendid double purpose sort.

Hoffman's Seed Corn

THE fertile soils of Lancaster County, Penna., produce strong-germed Seed Corn that yields heavily. And the cost is very little—less per acre than for almost any other Seed. It will pay you to plant the best.

"LANCASTER SURE CROP"—*Fine for Silo or Crib.* Grows tall and leafy, yielding a heavy tonnage of silage rich in grain. Matures well to the North. Any left from silo-filling can be husked for crib. Alvin Angerer, Michigan, writes: "I had ears that measured 16 inches long last fall, it also is a wonderful silo corn. I filled my 8 x 30 ft. silo with an acre and a half of this 'Lancaster County Sure Crop Corn.'" Read all about this Corn in our new Spring Catalog.

CATALOG and SAMPLES—FREE

Our new Spring Catalog also describes **"White Cap Yellow Dent"**—an extra-good crib corn, and other standard varieties. Eight heavy-yielding varieties of **Oats.** Maine-grown **Seed** Potatoes—all standard varieties. Best grades of hardy **Alfalfa** and northern-grown **Clover.** Explains how to get better stands of **Legumes.** Gives valuable pointers on **Soy Beans, Canada Oats,** and other specialty crops.

Write for this *free* Book today. Mention crops you intend to grow; we'll send samples. Get our Money-back and Freight-paid offers before buying Farm Seeds.

Do you know what *the* COD LIVER MEAL *and* OIL do in

FUL-O-PEP CHICK STARTER

No matter whether you have ten baby chicks, or a thousand, you really should know what the Cod Liver Meal and Oil in Ful-O-Pep Chick Starter can do for them.

In most cases, these new invigorating ingredients reduce chick mortality to an insignificant percentage. No longer need you expect to lose chicks because of diarrhea, or constipation. No longer must you regard leg-weakness or toe-picking as unavoidable chick ailments.

Cod Liver Oil, which has already proved its effectiveness in preventing leg-weakness, is aided by the Cod Liver Meal. These, blended with the good oatmeal and other ingredients of Ful-O-Pep Chick Starter, give chicks a healthy digestion. Every mouthful of this mash gives the chick a proper balance of just the things it needs.

The results are (1) decreased mortality; (2) a better digestive condition; (3) smoother, tighter feathers; (4) stronger bones; (5) more rapid growth.

It's in Ful-O-Pep Growing Mash, too

Cod Liver Meal has been added to Ful-O-Pep Growing Mash, too, so that the young birds may have the benefits of complete assimilation. Get your young flocks on this wonderfully good Growing Mash right away. Of course, Ful-O-Pep Growing Mash, fed to flocks that have come through the first six weeks on Ful-O-Pep Chick Starter, develops unusually husky early birds.

Both are "Weather-Proof" Feeds

Both Ful-O-Pep Chick Starter and Ful-O-Pep Growing Mash give flocks an extra stamina that enables them to thrive through unfavorable weather or a late season. It's the Cod Liver Meal—found only in Ful-O-Pep feeds—that provides this "weather insurance."

Somewhere in your vicinity there is a good dealer who sells the Ful-O-Pep line. He can supply you today.

Write for the 1926 Ful-O-Pep poultry book. It is free to poultry keepers. Use the coupon.

More Good Roads and Better Schools

A Hoosier Goes to See a Hoosier and Comes Home with Some New Ideas

By NORA DEL SMITH GUMBLE

A FRIEND of mine who has been a teacher for thirty years was motoring thru Randolph County, Indiana. She said finally to the young man driving, "There are a lot of mighty good schools around here."

"Yes," he said, "This is where Lee L. Driver was county superintendent for so many years. The way he handled the rural schools here, got him a big job some place in the East."

That big job is "Director of Consolidated Projects in Pennsylvania." It is some big job all right. It has the mountains, the roads, and a lot of folks rock-ribbed against it.

I think I sensed the impetus of Doctor Driver's arrival at Harrisburg. I said with some heat and emphasis, "If the powers that be think they are going to work the same scheme for schools over these twisted mountain roads that they do over the section lines of Indiana, they have another guess."

A Hoosier Plans to Meet a Hoosier

I was brought up in Indiana, too, in a county neighboring Randolph. A Hoosier will go a long way to see a Hoosier, even if he is mistaken. So when Doctor Driver made the commencement address at Hawley, Pa., Mr. Gumble and I were scheduled to meet him. The only date I had from his biography was the fact of his graduation from Indiana University in 1919. My own class was 1907.

Mr. Gumble commented on this with a comparison not altogether odious, "If Doctor Driver was graduated twelve years after you, he is surely very young."

"They have grown-ups at the University. I have the Director placed. He must be an Indiana school superintendent with a reputation."

This conversation was at supper. In the evening we went to hear the address. When Doctor Driver was introduced, Mr. Gumble whispered, "He's not young."

"I'm right, as usual," I retorted.

Then the speaker started his delightful talk by telling us about his own children and his bevy of grandchildren. So we knew his white hair was not entirely the result of early piety.

We were to talk with Doctor Driver after the exercises. I had doctored chilblains for five years because of a wagon "that went creeping like a snail unwillingly to school." This was an opportunity to get rid of an accumulation of disgust to the chief offender.

"Honestly, do you think consolidation is going to work over the bad roads of these sparsely settled hills?" That sounded as if I really needed information.

"The greatest objection to consolidation anywhere is the objectors." If Doctor Driver hasn't that silencer patented, he should. It's a good one. I know when I am out-talked, so we discussed the scenery.

Doctor Lee L. Driver

Not having been able to get my grudge out of my system, I came home to think it over. Here is where I ended. If Haynes, of Indiana, and Ford, of Michigan, had stopped to think about roads in those ante-flivver days, they would never have invented automobiles. The spring roads of the Middle West in those ancient days would have buried those primitive contraptions. But the miracle of good roads followed hard on their daring.

Must Have Courage

The people who believe in better schools must have the same fine courage. The most stubborn of us can not deny that our own new two-room school is better than the ones the grandfathers designed. Their architecture was fearfully unstudied. All we need now is roads to get the children (to page 28)

When Farm Wages Change They Go Up

How the Gradual Movement from Country to City Affects the Labor Supply

FARM wage rates in the United States are the highest since 1920 and the highest recorded with the exception of 1919 and 1920. They are more than three times as high as in the late sixties following the Civil War. Wages per month with board in 1925 averaged $33.94 for the entire United States against $13.29 in 1880 and $9.97 in 1869.

The average value of ten leading crops, based on December 1 farm prices, was $21.50 per acre in 1925 against $11.03 in 1890 and $14.67 in 1869. Besides board, 1.6 acres of crops were required to pay a month's wages for a farm hand in 1925 against only 1.2 acres in 1890 and .7 of an acre in 1869.

Monthly and daily farm wage rates, both with and without board, in 1925 averaged 68 per cent above the 1910 to 1914 level. Average prices at the farm for all farm products, including livestock, in 1925 were 47 per cent above the 1910 to 1914 average.

These figures show the progress the farm hand has made toward "getting more of the product of his industry," one of the central objects of the organized labor movement. The farmer, however, sometimes wonders whether "the laborer is worthy of his hire."

No Reduction in Sight

"No reduction in farm wages may be expected," reads the official outlook statement for 1926, issued by the United States Department of Agriculture. This is a sound view, considering that the prospects for employment in other lines will continue on a high level during most of the year.

Wages are inelastic, even when conditions tend to depress them. They change almost exclusively in an upward direction. This tendency is not characteristic of farm wages alone. For years, industrial labor has been highly successful in racheting its gains, preventing setbacks in periods of business depression.

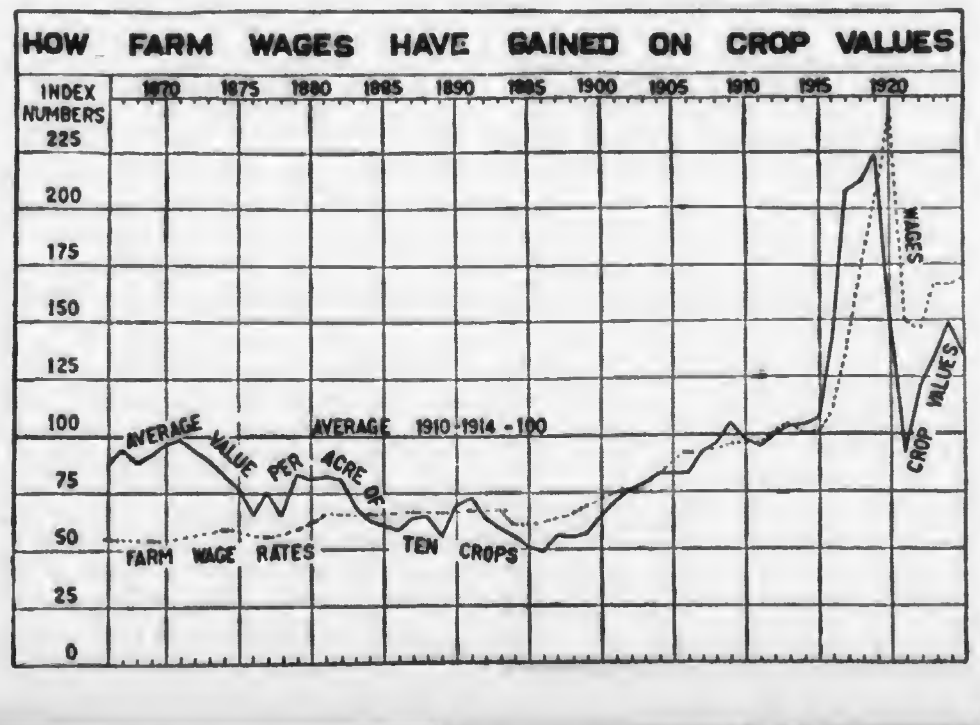
Part of the gain in wages of farm labor is due to its increased productivity as a result of improved machinery, larger equipment, and the use of mechanical power. Contrast the sickle, cradle and flail with the binder, threshing machine, header and combine of today.

In earlier years, a larger share of farm labor than at present was used in such work as clearing land, in constructing buildings, fences and drains, etc. Naturally, with this work done, each man can spend more time in the direct work of production, and fewer men are required to handle a given area of land.

Part of these gains thru improved machinery and thru completion of the pioneer phases of farm work are passed on to the hired man by giving him for his pay the product of a larger number of acres of land.

In spite of the large gains in farm wage rates as compared with twenty-five to fifty years ago, they are relatively lower than those of factory workers; the shift from an agricultural country to a manufacturing nation means that the labor requirements of industry are expanding from year to year.

There are many people moving from town or city to the country, but over any period of five or ten years, the movement away from farms exceeds the return movement. The agricultural population is not gaining in number equal to the excess of births over deaths on farms.



A Possible Limit

The limit may be reached when the nation becomes over industrialized and, particularly, when the demand for new urban construction, including new factories, transportation lines, power companies, roads and streets, as well as homes, apartments, office buildings and stores has outstripped the immediate requirements of the urban population and its ability to pay for them.

All such movements tend to run to extremes. This unbalanced growth of rural and urban population probably will reach a stage ultimately where there will be too many consumers of farm products compared with the number of (to page 28)

COLT LIGHT IS SUNLIGHT

SAFEST AND BEST BY TEST

DAYLIGHT *after* DARK

PERHAPS you've visited a friend who owns a Colt Light Plant. If you have, you know what a wonderful convenience it is. Perhaps you've wanted a Colt Plant in your own home—but have never bought one because you didn't think you could afford it.

The truth is that Colt Light actually pays for itself! For if you own a Colt Plant, you can spend every hour of daylight in the field. You don't have to quit work before dark to milk and feed up. You know that with your Colt barn light, you can do all your odd jobs as easily *after dark* as in the middle of the day. You know that Colt Light pays for itself *because of the extra hours you can spend with your crops.*

And think of the pleasure your whole family will have—with Colt Light in the home! Your wife can iron with the Colt Iron and stay cool even in midsummer. She has no dirty oil lamps to bother with. She can always get a quick meal with the Colt Hot Plate. Your children will enjoy studying, and you will enjoy reading at night—for Colt Light does not strain the eyes. Your wife and daughters can easily see to sew.

Scientific tests prove that Colt Light is practically sunlight. It is made by Union Carbide Gas. On the average farm two or three fillings of Union Carbide a year give plenty of Colt Light, at a cost of a few dollars.

Colt Light Plants are priced very moderately—and payments can be extended over a long period if you own your farm.

COLT TRADE MARK LIGHT

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

IN SPITE of the prompt setting and early start of the strawberry plants last spring they did not make as good growth during the season as we would like. We are unable to tell why. Others have told us that they had the same experience. In addition to the poor start, the past winter has been an especially hard one for strawberries because there was little snow covering in this section. Altho we had the plants at Neshaminy Gardens covered as usual they look far less promising now than did the plants at this time last year.

✤ ✤ ✤

FOR several reasons we are not planning to plant many potatoes this year, one of the chief being the high price of seed. We feel that potato raising is too much of a gamble to risk making the initial investment per acre of fifty dollars for seed, twenty-five dollars for fertilizer and twenty to twenty-five dollars for spraying, besides the plowing, planting, cultivating and harvesting. It is not my purpose to influence others in the matter of planting potatoes this year. It would be a national calamity for all to follow this reasoning since there would be no crop for the market. The government figures showing the "intention to plant" indicate that the acreage for 1926 will be a little over four per cent greater than it was last year, which will be about the five-year average.

✤ ✤ ✤

A FRIEND from Union County, Pennsylvania, has just been for a chat while I write these notes. He has been living off his farm for a number of years but has been running it with hired help. This became so unsatisfactory that he decided to unload the burden, so he made a sale and rented the farm. He stated that good renters are harder to secure in his county than has been the case in any previous year in his experience.

✤ ✤ ✤

AFTER my friend left the office I remembered a magazine article I read the other day in which the author raised the following question: "Why should farmers be in a position to complain, and why should they be leaving the farms when the public is spending more money each year to promote better farming? Is it because farmers will not learn, or is it because the costly aids and advice provided are not just what farmers need most?" Well, it is a good question, but the author quoted did not answer it. Can you?

✤ ✤ ✤

I HAVE never found any business which does not have its discouraging and unprofitable periods. The business of farming has been passing thru one. It has been thru many in the past but has always survived to experience a period of good times later. In my own mind I believe that the worst of the depression which followed the deflating period is well in the rear and that from now on the returns to the farms on which good farming is done will gradually increase. The principles by which the industrial and financial worlds are controlled have been changed and improved so that great panics are not likely to occur so frequently as they have in the past. This should help to stabilize agriculture also, and will when a few fundamental changes in that business have been made. I still have faith to believe that agriculture will, in the end prove to be the best as well as the "noblest occupation of man."

✤ ✤ ✤

A MAN of wide experience in city markets said the other day that the sale and consumption of sweet corn would "double over night" if every farmer could be prevented from pulling and sending to market the immense quantities of ordinary field corn which are annually dumped on the market. Of course, if people really want horse corn for table use they should be permitted to have it, but the corn is sold with the tacit understanding that it is sweet corn and, of course, the consumers are disappointed and buy less.

THE CHEERFUL PLOWMAN

Safety First

MY NEIGHBOR, Hiram Markus, drove madly into town and didn't care a pickle what train was coming down; now Hiram's with the angels and singing, "Watch Your Step" and sending psychic warnings to gentlemen of pep! My neighbor, August Coulter, pressed down upon the gas, disputing with an engine the sacred right to pass; now August is with Hiram and joining in the song, some thirty years too early he met the upper throng! My neighbor Hestor Shipley, a spinster in her prime, propelled her bouncing flivver at triple-sprinting time; the Oriental Flyer bore down upon her car, so she's where Hi and August and other speeders are!

My neighbor, Willie Collins, a youth with racing blood, was not afraid of railroads, of gravel, or of flood, so tried one Friday morning to beat a roaring train; with Hiram, August, Hestor, he's chanting, "Not Again!" My neighbor, Martin Muflets, was master of the wheel, he liked to go at eighty, he liked the thrill and feel; one day he met, unthinking, old Engine Twenty-three, and now he's shouting warnings from upper realms to me,—with Hiram, August, Hestor, and Willie (don't forget!) he's practicing with vigor—a "safety first" quintet!

Sweet music they are making, the five of them, I know; they're anxious, I am certain, for drivers here below, but I can't help but wonder if they should not have stayed down here in Wilkins County where danger signs are made, where signals at the crossings say, "Listen!", "Look!", and "Wait!" I feel they knocked too early upon the Golden Gate!"—J. Edw. Tufft.

Think how low the recent reduction of Chevrolet prices brings the cost of a fully equipped automobile. Compare what you get for Chevrolet's new low prices with any other car in the world.

Remember that Chevrolet equipment includes, three-speed transmission, disc clutch, Duco finish, alemite lubrication—on closed models Fisher Bodies and balloon tires and scores of other features essential on a modern motor car.

Remember that Chevrolet provides a performance so smooth—so powerful that it will amaze you. Skim over country roads. Plow through mud and sand. Rush up hills that balk bigger and higher priced cars. One ride in the Improved Chevrolet will convince you that equal power, flexibility, comfort and beauty cannot be obtained at anywhere near its price.

Now, more than ever before, check price for price and value for value—and you will buy a Chevrolet!

Vol. 93, No. 15 Phila., Pa., April 10, 1926 Whole No. 1508

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Pleasantness does not sound as well as self-sacrifice, or wisdom or spirituality; but it may include all these great words.—Margaret Deland.

Looking Ahead

LONG range forecasters of business conditions usually try to protect their reputations by frequent use of the words "probably" and "perhaps" in the prophecies. Just now, however, conditions are lining up so favorably for farmers that the well-known Brookmire Forecaster comes out with this statement in bold face type:

"The prospect is that relative farm prosperity will be maintained and that agriculture will continue to be a sustaining force in a possibly waning national prosperity."

Further on the Brookmire bulletin says: "Agriculture has just come out of depression. It is now on a firm foundation with prospects of fairly well sustained income and with capital values written down below their true worth."

Deposit Checks Promptly

BUSINESS houses that have dealings with country people often form a very poor opinion of the farmer as a business man, simply because he does not go to the bank as often as he should.

When any concern issues a check in payment for produce or services, it likes to get the canceled check back as soon as possible. As long as the check is out, the transaction isn't completed, and the books are unbalanced. Some firms consider this point so important that they print on their checks a statement to the effect that they will not be honored if not presented for payment within sixty days from the date of issue.

It is even more to the advantage of the receiver of the check for him to dispose of it promptly. That little piece of paper is simply a promise to pay a certain amount of money. If the firm that issues it goes out of business before the check is paid, that bit of paper isn't worth what it cost to print it. Or if the check is lost, and the endorsement is forged by the finder, the person to whom it was issued is simply out of luck.

Everyone who trys to conduct his affairs in a business-like manner should deposit all checks at the bank as soon as possible, or at least have them cashed by the bank or by the local merchant.

Feeds a Perennial Question

DAIRYING is one of our largest branches of agriculture and feeding the dairy cow is one of the most important features of that industry. For these reasons questions of how and what to feed are being asked continually. Besides the questions we receive asking what to mix to procure a balanced ration, many readers inquire which is the more economical, to mix ingredients at home or purchase ready mixed feeds. An example of the latter kind of inquiry is the following letter received this morning from a Bradford County reader:

"I would like to learn the best thing to do in feeding a herd of eighteen grade Holstein cows. One man tells you it is better to mix your own feeds on the farm. Another thinks it is better to buy ready mixed commercial brands of feeds that are of good quality.

"There are a number of farmers in this section who are about as interested in this matter as I am, and if you can tell me, I would like to know just what, in your judgment, would be the best method to follow—whether we should follow formulas that we find occasionally in the farm papers and mix our own feeds, or buy a good commercial brand of ready-mixed feed."—J. F.

Let us take for example Farmer A who has a good farm on which he raises an abundance of alfalfa and other legume crops. He has plenty of corn above what is required to fill his silos. Oats is a high yielding crop in his rotation system. Farmer A has made a study of feeds and feeding and keeps posted on the latest findings and developments. His barn is equipped with power and mills for grinding grain. The one element he does not have in sufficient supply is protein. This he must secure in the form of cottonseed meal, gluten feed, or oil meal. These he buys in wholesale quantities, paying cash. Since he knows how to do it he is in a position to mix his own feed economically and get good results.

Farmer B has the same number of cows but is equipped very differently. He raises very little alfalfa. His silage usually runs out long before pasture comes and he has no more ripe corn and no more oats than are required by his horses. He knows little about the science of feeding and does not understand the question of rations as does Farmer A. For these reasons, Farmer B will have better and more economical results if he buys a high grade, ready mixed feed.

These illustrations are used merely to convey an idea of the general principles underlying the economies of feed buying. They by no means represent general practice. Many dairymen in the Farmer A class buy all their feed ready mixed, while many in the Farmer B class mix their own rations. However, we believe it would be well for every dairyman to learn which class most nearly represents his conditions and act accordingly. The aim of everyone is, of course, the most milk at the least cost.

The advice and formulas published in farm papers are usually answers to questions asked by men who have available several feed ingredients but who wish to know what proportions to use and what to add to them to bring the protein content up to the necessary percentage.

Economy in dairy feed buying depends largely upon how feed or materials are purchased. The man who buys in small quantities on credit can not hope to buy as cheaply as the man who buys in wholesale amounts and pays cash. The dealer who carries credit accounts, keeps up a stock of feed, and doles it out in small quantities should not be expected to sell at wholesale prices.

Where Does the Money Go?

WHAT becomes of all the money people are earning? This question is asked frequently when the subject of high wages and full-time employment are under discussion. The question usually implies the thought that people are not saving any more than they did under former conditions. The records of savings banks and other institutions, however, seem to tell a different story.

Recently published statistics show that in 1913 there were over eleven million depositors in the savings banks, having a total of a little less than nine billion dollars on deposit. In 1925 the number of depositors had increased to nearly forty-four million, with a combined deposit of more than twenty-three billion dollars. The amount of life insurance carried increased from sixteen and one-half billion dollars in 1913 to seventy-two billion in 1925. In the past ten years the number of bond holders in the country has increased by three and one-half million. When to all this is added the amount of money involved in installment buying of homes, furnishings, automobiles, machinery, etc., it would seem that the American people are better off than they have ever been in the history of the country, and that not all their incomes are being wasted. Of course there is a big field for improvement in wise spending, and it is a fact that all too many of the wage earners are not to be found in the list of depositors and investors.

"Ear of Corn Markets"

READERS of Pennsylvania Farmer are acquainted with the efforts of New Jersey farmers operating roadside markets to shield themselves from the unsavory reputation developed by "gyp" horse-and-wagon "farmers." By living up to a rather stringent set of rules, and by submitting to inspection by the State Bureau of Markets, some of the Jersey produce men are building for the "Standard Markets" a reputation for fair dealing and high quality produce. Their way of doing business is certain to draw trade away from the man who loads up a wagon with stale produce from city wholesale centers and sells it along a busy country roadside.

Massachusetts produce growers have had the same kind of competition to meet. A group of farmers in one county of that state got together, decided upon a set of regulations, and adopted as their trade sign an ear of corn.

Now there is a movement under foot for cooperation between the progressive roadside market owners of several eastern states. The Massachusetts growers probably will adopt the principle of inspection by the State Bureau of Markets, which is already the practice in New Jersey. And the New Jersey standard roadside market owners very recently adopted Massachusetts' ear of corn as their sign. Maryland is expected to fall in line next.

It should not be long until a large number of "Ear of Corn" markets are in operation in the eastern states, helping to eliminate from the public mind the prejudice against roadside markets, in the neighborhood of the large cities, that has resulted from the tactics of unscrupulous fly-by-night dealers, and a few dishonest farmers.

Washington Letter

MAKES PROGRESS ON RELIEF PLANS.—Considerable progress has been made in the proposed agricultural relief legislation hearings before the House committee on agriculture. The organizations asking for such legislation have apparently reached a definite agreement as to the details of the measure they think Congress should pass. A statement in which the surplus disposal bill drafted by the Corn Belt committee is specifically endorsed, has been submitted to the House committee. It is signed by S. H. Thompson, president American Farm Bureau Federation; John Tromble, vice president National Farmers' Union; William Hirth, chairman Corn Belt Farm Organizations Committee; Frank W. Murphy, chairman American Council of Agriculture, and George N. Peek, chairman executive committee of 22, North Central States Agricultural Conference.

PROVIDES EQUALIZATION FUND.—This is the bill which provides for a Federal Farm Advisory Council, a Federal Farm Board, and an equalization fund, and classes wheat, cotton, cattle and hogs as basic agricultural commodities, on which an equalization fee shall be levied. It is asserted that corn is reached by the provisions for cattle and hogs. In the handling of each of these four basic products it is proposed that producers export trading corporations be formed.

THIRTY-ONE "RELIEF" BILLS.—Hearings on the thirty-one agricultural relief bills introduced in Congress so far this session were begun before the Senate committee on Agriculture March 29. A friendlier interest seemed to be shown by the Senate committee than by the House committee towards the various surplus disposal schemes.

GRANGE DOESN'T BACK THOMPSON.—There is some question as to the claims that all the organized farmers are united in favor of the Corn Belt committee's bill. Members of the congressional committees are stressing the point that the statement presented by President Thompson of the American Farm Bureau Federation was not signed by the National Grange and National Council of Farmers' Cooperative Marketing Associations, two of the largest and most influential of the farm organizations.

SAY SHIP CANAL WOULD TURN THE TRICK.—Former Secretary of Agriculture E. T. Meredith is in Washington in the interest of his plan to fix base-line prices on staple farm crops before they are planted.

Another group from the Middle West, headed by Ex-Governor Harding, of Iowa, are asserting that the proposed Saint Lawrence ship canal would provide all the relief that is necessary. Mr. Harding says the farmers' troubles are due to lack of transportation facilities back in 1921.

STANDARD BOLT LAW PROPOSED.—A bill has been reported favorably by the Committee on Manufactures which, while not strictly agricultural legislation, is of direct interest to agriculture. Its purpose is the standardization of bolts and screwheads. It is believed it would save much loss of time and delay in farm work if this bill should become a law.

WOMEN FIGHT FARMERS' INTERESTS.—The tariff on food products is being attacked by the National Consumers' League, whose representatives have been besieging Congress for a downward revision of rates. It is now indicated that the farmers will have arrayed against them the powerful opposition of the organized women's clubs, in the coming contest over tariff revision.

HEARINGS ON MILK TARIFF.—At the preliminary hearings in the milk and cream tariff investigations before the United States Tariff Commission, March 25, representatives of the dairy interests in the states bordering Canada asked for an embargo on milk and cream from across the border.

The Tariff Commission has decided to confine its production costs studies to eastern Canada, New York and New England. Consideration will be given to costs of production in divisions where the sanitary requirements are high, and on dairy farms where sanitary regulations are comparatively low.—E. E. Reynolds.

Harrisburg Letter

TO TEST RURAL RULES.—Action of the big electrical interests in appealing to the Superior Court from the new rural electric regulations on the ground that the Public Service Commission exceeded its powers in promulgating such rules will mean a prolonged fight in the courts as there is no doubt but that the case will be carried to the highest tribunal. It will be a test of very interesting character. No announcement has been made whether the appeal will interfere with effectiveness of the regulations for the present or not.

GOOD HONEY SIGNS.—According to a report issued by the State Department of Agriculture the inspections of apiaries by Charles N. Greene, the state inspector, show good prospects and splendid condition in many counties. Snow and moisture are said to be especially favorable.

BURNING THE BORER.—State agricultural authorities have tapped the emergency fund provided by the last Legislature to meet pests and will purchase types of tractors which burn over fields so as to destroy the stalks and roots in which the corn borer lurks. Experience of Ohio with such machines has been checked up and steps will be taken not only to burn out the borer in the northwestern counties where he has gotten a hold, but to inspect the fields. The state quarantine against the borer, which includes various counties in that part of Pennsylvania will be gone over and where farmers are unable to get out all of the stalks state appliances and assistance will be provided according to a schedule. Secretary Frank P. Willits says a determined effort will be made to keep the borer within the present limits.

SORRY TO HAVE TO GET YOU OUT OF BED, DOC, BUT THE MISSUS CAN'T REST UNTIL YOU SEE THE CHILD!
50 YEARS AGO—
HER TEMPERATURE IS 103, DOCTOR.
I'LL COME RIGHT OUT! FOLLOW MY INSTRUCTIONS UNTIL I GET THERE, MRS BROWN!
HAPPY BIRTHDAY
AND, TODAY!

The fiftieth anniversary of a great convenience

THE POTATO SURVEY.—State Bureau of Plant Industry officials have been working out their plans for a continuance of the survey of potatoes in Pennsylvania. The idea is not so much to work along the line of the potato wart quarantine, but to cover the state and hunt for any evidences. The wart has been localized in eleven counties and as immune varieties are being grown it is believed excellent results will soon be shown. But at the same time the survey is to go right on and neighborhoods not infected will be combed so as to make sure there are no unfavorable conditions. Seed potato grading will help.

ASKING FOR QUAIL.—While on the subject of potatoes it is a notable fact requests for quail to be distributed in sections of counties where potatoes are extensively raised have been coming to the Capitol. The value of the quail as a potato bug exterminator has become almost proverbial in Pennsylvania. Game authorities say they will furnish the quail if land owners will permit hunting.

FIGURES ON PEACHES.—Statistical officers in the Department of Agriculture are getting data together on peach trees, showing not only the number but the age of such trees in the commercial orchards. This survey shows the leadership is now in the Cumberland Valley—South Mountain country. The state's drive against the peach yellows is declared to be showing results in sections where the disease had been found to be a menace.

LINE UP ROAD WORK.—State Highway Department officials believe inside of a fortnight they will be able to have contractors go to work on the construction projects in the southern counties, but there are doubts about the northern line owing to the snow still on the ground and the depth of frost.

DRIVE ON WEEDS.—Farmers and landowners of Pennsylvania are going to be warned against the presence of dangerous weeds and the necessity of arranging work so that weeds can be attacked before they start to seed.—Hamilton, Harrisburg.

New Jersey Letter

POTATO SEEDING UNDER WAY.—Milder weather in late March permitted field work in the central New Jersey potato belt. Plowing was the order of the day and considerable ground was planted in early spuds. Potato growers are getting more and more away from Jersey Giants and later varieties and proper packing and merchandising methods are widely advocated in central New Jersey this year.

VINELAND BUILDINGS NEED PAINT.—Lack of money to keep repaired the buildings at the national egg laying contest at Vineland has brought forth considerable comment on the part of poultrymen thruout the state. The farm interests secured a small appropriation to paint the buildings in the current appropriations bill. Recent controversy in the Legislature on appropriations do not include an agricultural budget, and poultrymen were optimistic that the bill as finally approved would include the funds for Vineland.

LESS ACREAGE IN TOMATOES.—With the information general that large stocks of canned tomatoes, corn and peas are held over this year, tomato growers in southern New Jersey are reducing their acreage decidedly, some cuts being reported from twenty to fifty per cent. It is seldom that the carry-over of canned goods has been of such quantity that spot prices are the highest offered for future deliveries, and some of the leading growers have stated that they will not plant this season except for sale under canhouse contracts.

RENEWED INTEREST IN FAIRS.—Early spring meetings of fair association committees in various parts of the state indicate plans well under way for a good fair season. Last year there was considerable talk about discontinuing several of the older and well-known local fairs. Some of these were finally brought thru with satisfactory attendance and interest and the general indications at present are that New Jersey will have more representative and large local fairs this year.

JUNIOR APPLE DEMONSTRATION.—The State Department of Agriculture has been interesting students in vocational schools in proper grading and packing of apples. Demonstrations have been held for more than 500 boys in the state. The program is a phase of the work of the Department to interest farm boys in standard grades of farm products now demanded by consumers in the large markets. The apple demonstrations were held at nine major towns from Newton and Hackettstown down thru the central part of the state to Shiloh and Bridgeton.—B.

New York Letter

STATE REFUSES REQUESTS FOR MORE FAIR MONEY.—Leaders in junior project work in this state have recently made a strong plea for an addition of $1800 to prize money offered in junior departments at the state fair. It was denied, for lack of funds. Livestock interests asked for a special division in which dairymen whose cattle are not distinctly of the show herd type might exhibit, as one of the greatest needs of dairying in the state. This was denied.

MAPLE SEASON STILL RETARDED.—Continued cold weather has prevented a free flow of sap. Many leading maple syrup makers have not tapped their trees yet. The coming of robins was delayed several days beyond former late records for their appearance. Snow and ice still block most country roads of the state. This being true on the last day of March will mean a very short maple season, a late spring, and considerable inconvenience in the major farming operations.

TWELFTH STATE TAX CONFERENCE.—H. E. McKenzie, the Farm Bureau's tax expert, recently made his plea before the Twelfth State Tax Conference in behalf of farmers. He proved that in 1924 real estate paid seventy-six per cent of the state and local taxes; that exemptions have grown out of all reason, twenty-one per cent of all real estate in the state being now exempt; that the state should assume the financial burden of the common schools; that relief from road taxes is needed, thru a gasoline tax, to be administered by the state and sent back into the counties; that future taxes should be more largely on income and less on value; that personal income and corporation taxes should help take up increasing cost of government; that exemptions on personal incomes should be lowered, whereas the present legislature has just raised them to permit the release of nearly a third of the income tax of the state; that there should be an unincorporated business tax; that inheritance taxes should probably be increased; and that more attention should be paid to fees and licenses.—M. G. F.

Of course you're going to spray this year with the more effective, more convenient Pyrox, so

why not save money by getting your Pyrox in the five, ten or twenty-five pound drums?

YOU'LL save money and time and run absolutely no risk, because the new improved Pyrox will keep its creamy, easy-working consistency until used.

Last season the success of the new Pyrox was nothing less than sensational. Its increased effectiveness as a combined insecticide and fungicide spray, and its greater convenience, were revelations to the thousands who used it.

With Pyrox, five minutes, and you're ready to spray. Pyrox saves time, labor and money. It goes farther. *It sticks*, making frequent sprayings unnecessary. Lengthens the growing season, increases the yield and improves quality.

THE NEW IMPROVED Pyrox REG. U.S. PAT. OFF. TRADE MARK REGISTERED

the powerful triple-duty spray

Kills Bugs *Controls Diseases* *Improves Foliage*

Its soft, creamy consistency is guaranteed by 28 years of manufacturing experience.

Made by BOWKER CHEMICAL COMPANY, 40 West Street, New York

Manufacturers also of Bowker's Arsenate of Lead; Bowker's Calcide (high-grade calcium Arsenate); Bowker's Bordeaux; Bowker's Bordeaux Arsenate; Bowker's Lime Sulphur; Bowker's Copper-Lime Dust.

Eureka Traction Sprayer

Does the biggest, most necessary job in crop raising. Insures investment in crops and increases yield from 50 to 200 per cent. Eliminates bugs, mold and blight. Quickly sprays potatoes, tomatoes, garden truck, cabbage, cucumbers, pickles, tobacco, beans, sugar beets, celery, etc.

The Eureka has 1, 2 or 3 nozzles per row and 4, 6 or more rows per boom. Wheels adjustable to various width rows. 60 to 100 gal. tanks with double or triple action pumps. May be equipped for spraying orchards and bushes.

In stock near you. Write today for catalogue on Eureka Sprayers and Potato Machines

Eureka Mower Co., Box 140 Utica, N.Y.

OATS

SENSATION—One of the most productive oats in cultivation. 75 bushels and upward per acre are frequent with large, white, meaty grains weighing 44-46 lbs. per measured bushel of the highest quality. Seed furnished as low as 65c per bushel in quantities. You should by all means try these oats.

Write for sample and circular

Pennsylvania State College

Small Fruits to Grow in the Home Garden

(Continued from last week)

CURRANTS and gooseberries are heartily neglected in most gardens. Both luxuriate under coolness and moisture, preferring partial shade, and can be grown to advantage under a permanent heavy mulch. The white pine blister rust, which threatens to destroy the five needle pines of the country, lives part of its life cycle on currants, especially the European black currant; hence currants are more or less taboo in New England states unless grown over 1000 feet away from the pines.

Since the stand of white pine in the United States is worth $500,000,000 and that of Canada $600,000,000, it is likely that the currants will be sacrificed if necessary, rather than the pines. We can let the black currants go without regret but we should hate to lose the reds. Standard varieties of the red currant in order of ripening are Fay, Wilder and Diploma. The Golden or Flowering currant, a favorite ornamental bush on old fashioned lawns, with fragrant yellow flowers, makes fair jam and preserves.

Currants mulched heavily with straw. This is preferable to cultivation.

San Jose Scale Kills Quickly

Watch currant bushes sharply for San Jose scale which kills them quickly, and spray with lime-sulphur. Fresh powdered hellebore dusted on the leaves thru a piece of muslin will kill the worms that eat the leaves so voraciously.

Gooseberries are even more discredited than currants chiefly because they are so viciously thorny, and because Americans eat them green and do not let them ripen on the bushes, as in Europe, when they become a really interesting dessert fruit. Two of the best of the American varieties are Chautauqua and Poorman. The English varieties, while of high quality, require too much coddling. Both currants and gooseberries may need a spraying with Bordeaux to prevent defoliation of the bushes by leaf-spot.

Conditions Required by Strawberries

The limiting factors in the culture of strawberries are an optimum of moisture and a minimum of weeds. Both conditions are rather difficult to maintain. This is one reason why potted plants, set in early August, find favor amonk home gardeners. They are set after the most aggressive weed invasion has passed, following a crop of some early vegetable. Altho few runners are made there is a fair crop the following spring. This method is more expensive than setting runner plants in the spring, but far less trouble.

Spring-set plants need careful attention in training the runners. It is best to keep the row narrow, not over fifteen inches wide, and cut off all surplus runners after a row of this width has been made. Keeping the plants in hills, by pulling off all runners, is impracticable in this climate altho it gives some very fine berries if the plants are very carefully mulched. Apply the mulch in late fall an inch or two deep, using clean straw, free from weed seeds or grain; never use fresh horse manure, which is weedy. All the flowers of the strawberry plant are formed in the crown during September and October of the year before they open, hence the main effort should be to secure strong crowns and hence, also, irrigation while the berries are swelling will increase their size but not their number.

Diploma and White Grape currants are two good sorts for the garden.

In market garden culture only one crop may be harvested and a new field set each spring. In the home garden usually it is best to harvest two or three crops. Immediately after the last picking reduce the width of the row to about six inches. Spade under as many of the older plants as possible and enrich the soil between the rows so as to favor the formation of new runners. Mowing and burning leaves is not necessary with clean foliage sorts like the Howard 17.

Extra large exhibition berries may be grown to best advantage from potted plants set on heavily manured ground. Only two or three fruits are left to mature on each plant and the plants are watered daily with liquid manure. Immense berries, three or four to the quart, may be grown in this way; but, as Marshal P. Wilder once remarked, "We already have strawberries large enough to fill any mouth of decent dimensions."

Downing—One of the best American gooseberries.

Ripe strawberries in mid-winter may be had by setting potted plants in six-inch pots and growing them in a cold frame until late fall, with frequent and copious watering. When brought into heat gradually after December 1, these plants give berries of exceptionally high quality. The blossoms will need to be pollinated by hand and the plants fed with liquid manure.

The Different Varieties

The outstanding variety in Pennsylvania is the Howard 17, erroneously called Premier. It is prolific, ripens early, is of good quality, and the foliage is remarkably free from disease. Marshall and Glen Mary are dependable second early sorts. Chesapeake, Gibson, William Belt and Parsons, are good late varieties, while Gandy and Stevens Late are excellent very late varieties. The Chesapeake is one of the handsomest berries but makes few runners and is best grown under irrigation.

The highly advertised "everbearing" strawberries are disappointing except under very favorable conditions, including rich soil and a copious supply of moisture thruout the season. The Champion now seems to find greater favor than the Progressive. If the blossoms are picked off until July, they may give light pickings during August, September and October—enough for an occasional shortcake—and a fair crop the following spring.—S. W. Fletcher.

(To be continued)

"Tomorrow afternoon," said a minister to his congregation, "the funeral of Mr. So-and-so will be held in this church. I shall make the funeral address on this occasion and the man himself will be here, the first time in twenty years."

OUR AIM: TO SERVE YOU WELL AND FAITHFULLY —ALWAYS

J.C.Penney Co. INC. A NATION-WIDE INSTITUTION. DEPARTMENT STORES

WHERE SAVINGS ARE GREATEST THRUOUT THE YEAR

NATION-WIDE Store Service

IT was in the days when dad pulled on his big cowhide boots by the straps and pulled them off again with the aid of the old bootjack. The old grey mare and the spring democrat wagon were relied upon for safe conveyance to town.

It was during those good old fashioned days, nearly a quarter of a century ago, that "Jim" Penney, as the miners up in the mountains of Wyoming called him, opened a good old fashioned store and conducted it in the good old fashioned way—a square deal alike to everybody and economy for all who came to him for their dry goods, clothing and shoes.

That was in April, 1902, 24 years ago: then Mr. Penney served comparatively few people and his business that year was only a few thousand dollars.

Since then great changes have taken place. Paved and hard surfaced roads have replaced the old dirt roads with their sinkholes and ruts. Automobiles have supplanted Old Dobbin and the buggy. Tedious journeys of yesteryears are merely incidents of busy hours nowadays.

Today the 676 Department Stores that bear Mr. Penney's name, scattered from coast to coast in 44 States, are within reach of more than one-fourth of the entire population of the United States. The business amounted to over $91,000,000 in 1925.

The good old fashioned principles and policies continue to govern. At no time in the active career of the Company has there been even a momentary departure from these methods.

The J. C. Penney Company has served itself best by serving the public most. Its co-operative plans in which both producer and consumer derive far-reaching advantages, together with its large buying and selective powers, have earned a great testimonial in steel and concrete —the J. C. Penney Co. Building at N. Y. while creating still another testimonial, *the confidence and good will of legions of customers.*

Hoffman's Seed Corn

Ears of *"Lancaster County Sure Crop"*—a splendid double purpose sort.

Sound Germination Sold at Right Prices

THE fertile soils of Lancaster County, Penna., produce strong-germed Seed Corn that yields heavily. And the cost is very little—less per acre than for almost any other Seed. It will pay you to plant the best.

"LANCASTER SURE CROP"—*Fine for Silo or Crib.* Grows tall and leafy, yielding a heavy tonnage of silage rich in grain. Matures well to the North. Any left from silo-filling can be husked for crib. Alvin Angerer, Michigan, writes: "I had ears that measured 16 inches long last fall, it also is a wonderful silo corn. I filled my 8 x 30 ft. silo with an acre and a half of this 'Lancaster County Sure Crop Corn.'" Read all about this Corn in our new Spring Catalog.

CATALOG and SAMPLES—FREE

Our new Spring Catalog also describes "White Cap Yellow Dent"—an extra-good crib corn, and other standard varieties. Eight heavy-yielding varieties of Oats. Maine-grown Seed Potatoes—all standard varieties. Best grades of hardy Alfalfa and northern-grown Clover. Explains how to get better stands of Legumes. Gives valuable pointers on Soy Beans, Canada Oats, and other specialty crops.

Write for this *free* Book today. Mention crops you intend to grow; we'll send samples. Get our Money-back and Freight-paid offers before buying Farm Seeds.

A. H. HOFFMAN, INC. Box 40, Landisville, Lanc. Co., Pa.

Every 200-pound bag of V-C Fertilizer used per acre, on Corn will produce under good cultural conditions, an increase of 10 bushels of grain, equivalent to 100 pounds of pork.

Fertilize For a Full Ear Well Matured

Back of every fully matured ear was a stalk that was well supplied with plant food during the growing season.

Make more bushels of sound ears by selecting a fertilizer for your Corn that will feed it at every stage of growth and mature it early.

V-C Fertilizers for Corn not only nourish the plant while small, but when it is forming and filling the ear. They give the corn a quick start in the spring, grow it rapidly, uniformly, and mature large, heavy, well-developed ears before frost.

V-C Fertilizers have an established reputation among leading Corn growers for producing heavy yields of sound grain.

Ask your dealer for V-C Fertilizers made for Corn, or write

Raising Asparagus Roots

How can I raise my own asparagus roots?—A. L., Chester County, Pa.

Since you have asked how you can raise your own asparagus roots, I assume that you have already considered the pros and cons of buying versus growing asparagus roots. Good roots can be grown under the right conditions and if you plant plenty of seed you can save only the best roots and discard the smaller and weaker ones.

Soils which are open and porous facilitate root penetration and elongation, therefore, well decomposed peat or light sandy loams are best suited for the production of good crowns. Roots can be dug early and with a minimum of injury. Heavy soils can be used to grow your crowns, but it requires more labor to keep them in good physical condition. They remain wet later in the spring, also a heavy soil may become packed and in this condition digging becomes difficult, roots are injured and many of the large fleshy roots lost entirely.

Soil Must Be in Good Condition

Have the soil in good condition, asparagus seed germinates slowly, if the land is weedy, the young plants may be smothered out before they are large enough to be seen in the row. It is usually from two to six weeks before the plants appear above ground and another week before the young plants are large enough to be visible in the rows so as to permit cultivation.

In order to overcome the difficulties incident to slow germination of the seed, a number of growers have practiced a method worked out by H. A. Borthwick, of the California Agricultural Experiment Station. Soaking asparagus seed in water is not difficult. The temperature and time may vary considerably without danger of injury. A temperature of the water of eighty-six degrees to ninety-two degrees Fahrenheit for four or five days is recommended. Soaking in water at the ordinary temperature of the air, seventy to seventy-five degrees Fahrenheit, for short periods of time has comparatively little value.

After removing seed from water, spread out thin on canvas, stir for a few minutes until water disappears from surface and then plant immediately. The soaked seed will be swelled but hard and firm and after drying for a few minutes may be planted either with a drill or by hand. Caution: Do not plant soaked seed in a very dry soil, in one day the dry soil will take up the moisture in the seed.

A Few Necessary Points

One pound of seed grows enough plants for an acre field, one ounce should produce enough to set out 200 feet of row. Rows for seed should be about twenty-eight inches apart, sow seed in furrows three to six inches wide so as to give the growing plants plenty of room. Plant seed from one to two inches deep. It is generally advisable to let seedlings stand in the seed row over winter, dig just before growth starts. Eliminate all inferior plants. Do not hesitate to throw away small or injured plants.

Asparagus varieties and planting the bed were discussed in an article in Pennsylvania Farmer of March 13th. Mary Washington is the variety for first choice, followed by Martha Washington and Reading Giant. You can grow good roots, give them care, fertilize if the soil is light and plant enough seed spaced far enough apart so that each crown can develop alone. Seed planted three inches apart will prevent rootstocks becoming interwoven so that it is difficult to separate them at digging time.—W. T. Tapley.

The Book That Began a New Era for Orchardists

A Golden Harvest from Your Under-Grade Apples

HERE is the impressive story of profitable cider making! The story of how sound undergrades are sold at prices that double the value of your apple crop! The complete details of how progressive orchardists made thousands of dollars from undergrade fruit in 1925! And this book, "A Golden Harvest from Undergrade Apples"—describing Mount Gilead Hydraulic Cider Presses and the Mount Gilead Process—is free to you.

Mount Gilead HYDRAULIC CIDER PRESSES

Are the first choice of progressive orchardists. Their dependable efficiency produces the greatest possible amount of juice from every bushel of apples. They are made in a wide range of sizes from a capacity of 80 bushels to 1,500 bushels a day, including presses for roadside, orchard and custom pressing. There are more Mount Gilead Cider Presses in current use—and more being sold each year—than all other hydraulic cider presses combined.

The Mount Gilead Process

Without the use of chemicals—and without cooking the juice—the famous Mount Gilead Process produces pure cider that keeps sweet the year 'round. It conforms in every detail to the Federal Prohibition Laws. It enables you to market fresh cider the year 'round at "top" prices.

Write for Your Copy

Write us today for your free copy of this interesting book, "A Golden Harvest." It tells you not only the story of Mount Gilead Presses and the Mount Gilead Process but also how to make real money from apple products.

Dr. Lipman Goes Abroad

NINE American delegates have been appointed by Secretary Kellogg, of the State Department, upon the recommendation of Secretary Jardine, of the Department of Agriculture, to represent the United States at the biennial meeting of the General Assembly of the International Institute of Agriculture which will convene at Rome, Italy, on April 19th.

The delegates include L. J. Taber, Master of the National Grange; J. G. Lipman, director, New Jersey Agricultural Experiment Station and Contributing Editor of Pennsylvania Farmer; S. T. Dana, United States Forest Service; R. A. Oakley, Bureau of Plant Industry; O. C. Stine, Bureau of Agricultural Economics; C. J. Galpin, Bureau of Agricultural Economics; R. A. Pearson, president of the University of Maryland; Asher Hobson, permanent delegate of the United States, stationed at the Institute, and E. A. Foley, American Agricultural Commissioner at London.

The biennial conference, which is attended by representatives from the sixty-two countries that have membership in the Institute, is for the purpose of formulating a program of action for the next two years in connection with methods of collecting and disseminating statistics on current world crop conditions, the movement of agricultural products in international trade, and other agricultural problems. The Institute is virtually a world clearing house of agricultural information and has been an important factor in enabling the Department of Agriculture to keep farmers in the United States informed on crop conditions in competing world areas.

1925 Crop Honor Roll

LANCASTER County, first in the total production of wheat, corn, tobacco and hay.

Somerset, first in oats.
Lehigh, first in potatoes.
Bradford, first in buckwheat.
Berks, first in rye.
Adams, first in apples.—Weekly News Bulletin, State Department of Agriculture.

The Department of Agriculture has indirect telegraphic contact thru the Institute with the responsible government crop reporting agencies thruout the world. The crop data are received by telegraph and radio at Washington, where they are interpreted and released immediately over the United States for the guidance of farmers in the production and marketing of crops.

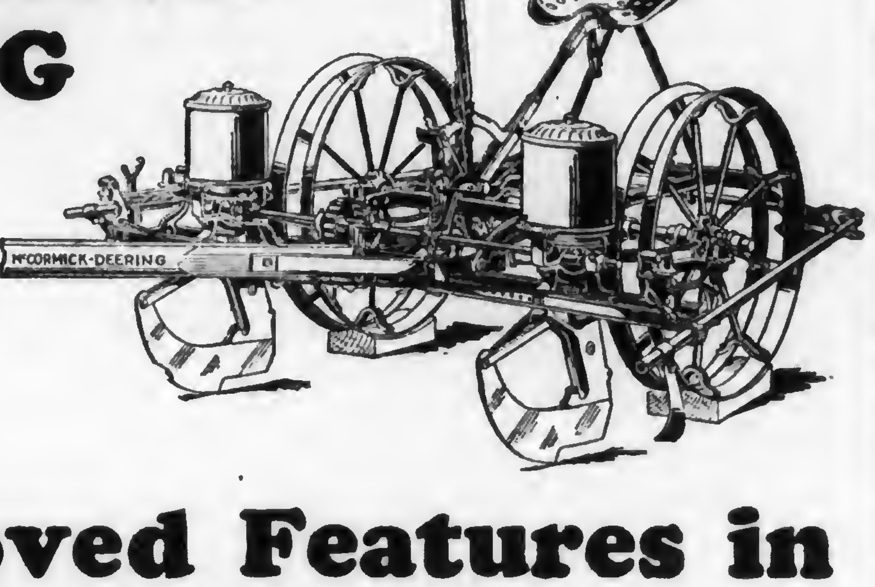
Control Oriental Moth

IN THE hope of reducing the ravages of the Oriental fruit moth the Bureau of Plant Industry, State Department of Agriculture, is urging the cultivation of peach orchards to a depth of at least four inches before the trees blossom this spring.

This moth is found in peach orchards thruout southeastern Pennsylvania and causes heavy losses each year. The damage is caused in two ways: First, the larvae feed in the young shoots of the peach tree, killing them back and causing them to take on a bushy growth; and, second, the larvae feed in the fruit of peach, quince and apple causing a wormy product which is often not evident from the exterior.

Many larvae of this much-dreaded insect spend the winter in bits of plant material about the peach orchard and thoro cultivation aids in their destruction. While not giving complete control, early cultivation is one of the series of measures, advocated by the various state and federal agencies, for reducing the loss.

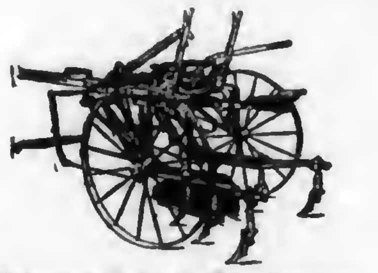
McCORMICK-DEERING Corn Planters and Drills



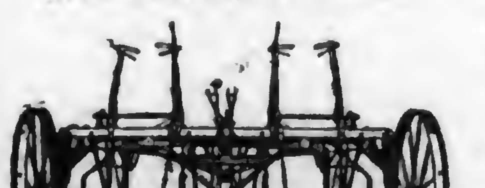
Time-Proved Features in a 1926 Model

1. Variable drop.
2. Improved clutch.
3. Plunger-type valve action.
4. Improved check heads.
5. Check-row or drill.
6. Any type openers.
7. Automatic markers.
8. Improved fertilizer attachment.
9. Built-in power hill-drop.

Flat, edge, or full-hill drop. Plates interchange. Plant peas and beans with corn with the 1926 McCormick-Deering Planters.



McCormick-Deering 1-Row Cultivator



McCormick-Deering 2-Row Cultivator

McCormick-Deering 1 and 2-Row Cultivators

For as long as many can remember, McCormick-Deering cultivators have been helping grow good crops wherever row crops are grown. This year will see these easy-to-operate, thorough tools again at work. Perhaps on your farm there is a need for a new 2-row in place of worn out single-row cultivators. Or perhaps you are going to replace a walker with a rider. Whatever your need, remember the quality of McCormick-Deering cultivators and the complete service rendered by McCormick-Deering dealers. Give your local dealer a chance to show you these good planters and cultivators.

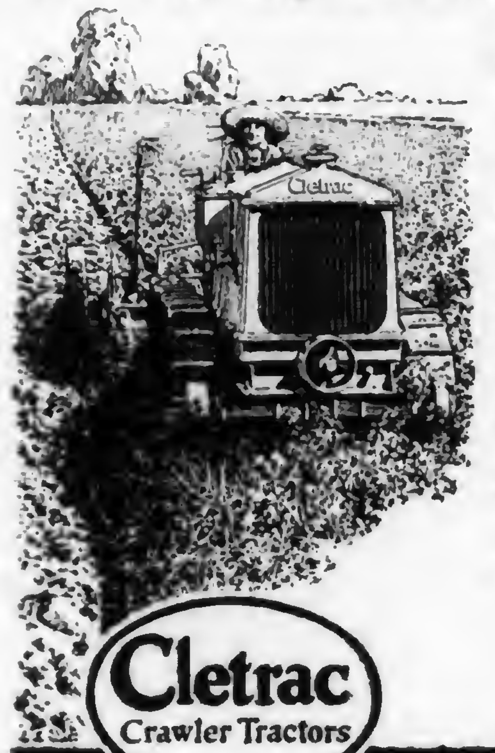
=Cletrac=
Crawler Tractors

CLETRAC'S abundant power, low operating cost, and extremely easy handling make it a farm tractor of unusual ability. With Cletrac on the farm, it is easy to set a new record of economy and speed on all the big jobs. Labor costs are cut, work is done quicker and easier, time is saved and power expense is cut to an absolute minimum.

Plowing, discing, seeding, cultivating—heavy field and belt jobs—Cletrac wades through them all and puts bigger profits in the pockets of its owners.

You Can Depend on a Cletrac—Always!



Cletrac Power is always "on the job"—whether in the field, the barn, the woodlot or on the highway, building and maintaining roads. It is dependable power—easily controlled—and quickly available.

The broad tracks of Cletrac Tractors afford positive traction and substantial fuel saving. There is no wasted power. And their short turning radius and low heighth make them ideal for thorough work in tight places.

Let us tell you how Cletrac Power earns large profits on every class of farm work. Write us today for complete information and the name of our nearest dealer who will demonstrate the Cletrac for you.

A New White Diarrhea Tablet

Diarrhea among small chicks has become so prevalent that it has engaged the attention of our foremost men of science.

At the instance of Dr. Hess & Clark a group of veterinarians and chemists have made diarrhea in chicks a subject of scientific research.

These men have evolved an entirely new tablet for White Diarrhea—in fact, any form of diarrhea affecting poultry.

Dr. Hess & Clark are now manufacturing this new diarrhea tablet and placing it on the market this season for the first.

You will want this new tablet, which is the last word in medical science for White Diarrhea, either as a preventive or as a remedy.

You can secure this tablet from any Dr. Hess & Clark dealer. Ask for

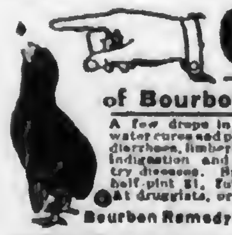
Dr. Hess
WHITE DIARRHEA TABLETS

Then follow these simple directions:

Crush and dissolve just 4 tablets in each gallon of drinking water (one tablet to a quart). Stir once thoroughly, then let your chicks run to it; they will doctor themselves.

Make a fresh solution each day.

Our guarantee covers this tablet absolutely. DR. HESS & CLARK, Inc., Ashland, Ohio.



One Drop
of Bourbon Poultry Remedy
Cures Gapes
A few drops in the drinking water cures and prevents white diarrhea, limberneck, cholera, indigestion and other poultry diseases. Small size 60c, half-pint $1, full pint $1.50. At druggists, or sent by mail.
Bourbon Remedy Co., Box 8, Lexington, Ky.

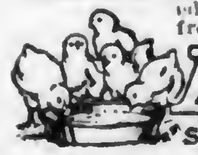
Diarrhea Killed Half Her Chicks

Not another chick died after using this in the drinking water

Readers will be interested in this letter from Mrs. John Shaffer, of Owen, Wis. She says:

"I bought 25 baby chicks. When about a week old, they began to get droopy and in a few hours would die. After 10 of them had died, I began putting Avicol in the drinking water. They stopped dying at once and I didn't lose another chick."

A free test of Avicol will show how easily white diarrhea can be prevented and stopped. The way it makes sick chicks lively and healthy in just a few hours, will amaze you. Write today for free sample, or send 50c for full-sized package to Burrell-Dugger Co., 657 Nelson St., Indianapolis, Ind. It costs nothing to try the 50c package, as Avicol is guaranteed to do the work or money refunded. But if you prefer, try free sample first.



AVICOL stops chicks dying

Poultry

Rations for Chicks

I have 300 White Leghorn chicks. The feeding problem troubles me considerably. I am trying to find a simple ration and method of feeding to get them past the critical period which I understand to be the first three weeks. There are so many ways and so many mixtures suggested that I am confused. Besides, I shall not have time to feed a complex ration as the spring rush will be coming on, hence only the simplest will meet my conditions.—M. E. B., York County, Pa.

If you are busy with farm work and have little time to mix chick rations it will be very profitable to buy one of the commercial starters for chicks. Many experienced poultrymen use these starting mashes entirely because they are carefully mixed with first class materials and produce excellent results. Very often poultrymen who mix their own laying mashes do not attempt to mix the starting mashes for the chicks.

Cod liver oil can be mixed in the mash at the rate of one pound of cod liver oil to 100 pounds of mash. Cod liver oil can be mixed with semi-solid buttermilk or cottage cheese at the rate of one to sixteen and the chicks given a little each day. The starting mashes are placed in hoppers to which the chicks have access at all times. If they seem to become overfed and listless it sometimes helps to remove the hoppers for a few hours to stimulate their appetites. Full directions for feeding the different brands of starters come in the bags.—R. G. Kirby.

Avian Tuberculosis

I have a flock of forty pullets. I feel quite sure from what I have read on the subject that some of them are infected with tuberculosis. Will such infection affect the eggs for use or hatching? I plan to sell present flock before next fall and disinfect the house. Does snow and freezing weather kill the germs outside? The chickens can run anywhere on the farm. Is there much danger of infecting little chicks if they are kept in pens? If so, will the use of lime remove danger? What disinfectant is best to use in chicken house? Is there danger of infecting family or farm animals?—R. J. B., Venango County, Pa.

It is a fortunate fact that sick and diseased hens seldom produce eggs. Usually egg production stops almost immediately when sickness begins. For that reason it is considered safe to use eggs for food even tho a few birds in a flock may be out of condition. It is best to hatch only eggs from strong vigorous breeding stock. By killing or isolating any birds that seem under par, you might mate up a breeding pen of the best of the remaining birds and use their eggs for hatching.

Keep Soil Clean

The cold winter weather undoubtedly does a great deal to clean up a poultry range and free it of disease germs. This is especially true when the birds are confined thruout the winter and do not use the range from November 1 until the middle of April. It pays to raise young chicks on soil as clean as possible. It is best to keep them on a range fenced away from the old stock. Plowing and liming an old poultry range are very beneficial.

The commercial coal tar disinfectants are widely used by poultrymen with good success. Swine can be infected with avian tuberculosis. If you suspect this disease in the flock it usually pays to have a veterinarian inspect the birds and make recommendations. There is a natural prejudice against using poultry for meat unless they are in the best of condition and it is probably safest to use only such birds.—R. G. K.

Production Dropped

I have a flock of 820 birds, 470 hens and 350 pullets. Up until February 25 I turned on the lights at five A. M. The average number of eggs was 600 daily up until that time. After that I began to lose birds, oviducts protruded, and production fell to 425 on March 12 and as low as 375 on the 17th. What is your opinion of my trouble?—H. C., Montgomery County, Pa.

When 820 birds, of which more than half are hens, are producing 600 eggs per day up to February 25, there is always the danger of a slackening in production along towards spring. Your production was about seventy-five per cent and now a lot of the birds are slowing down because they need the rest to gain new vigor and increase their bodily weight. The use of artificial light advances the time of heavy production but may not greatly increase the total annual production.

Cull Out Less Vigorous Birds

You sold more high-priced eggs but will have to take a lower production at this time. Nothing much can be done but feed the normal ration and turn the birds on range as soon as the weather permits. They will rapidly improve and may be profitable producers for several months. Culling out any birds that seem lacking in vigor will cut down the feed bill.

The protruding of the oviduct is sometimes caused by heavy laying of large eggs especially by pullets. Remove such birds from the flock at once to prevent cannibalism. Place vaseline on the parts and return them gently. If they will not stay in place it is best to kill the bird.

If you can keep the flock close to fifty per cent production after the heavy fall and winter production it will not be a bad record for the year.—R. G. Kirby.

Roup and Canker

Please let me know what I can do for my barnyard flock of mixed chickens. Their eyes swell up and close. A yellow pus forms in the mouth and throat. I don't seem to be able to cure them. We feed them dry mash and a grain mixture of wheat and corn. We let them out every day and lock them up at night.—G. Z., Washington County, Pa.

The hens probably have roup and canker. Treatment is the most satisfactory in the early stages. It may be best to kill the birds that are badly devitalized and becoming thin. Hens in fairly good condition may be treated.

Remove the thick yellow pus on the cankers and touch the sores with iodine. Remove the mucus from the nostrils by squeezing with wads of tissue paper and inject commercial disinfectant or a strong solution of potassium permanganate.

The lumps under the eyes have to be lanced and the thick leathery pus removed. Then place a small wad of cotton soaked with iodine in the wound so it will heal from the inside. Such treatment is severe. It takes time and a long period of isolation to avoid infecting healthy members of the flock with the disease. The best method is to keep the houses as clean and well ventilated as possible to prevent such troubles. The simple colds and small canker spots submit readily to treatment but hens in the last stages of roup and canker had better be killed.—R. G. Kirby.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 517, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Waterloo, Iowa,** for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 517,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

Mark (X) in square indicating size package wanted. Large package contains about two and one-third times as much as small.

Scene in White House, 1862. Lincoln signing the famous Land Grant Act, which was sponsored by Justin S. Morrill (at left). It was largely Morrill's sagacity and vision which made possible the development of Agricultural Colleges and Experiment Stations.

Proving by Test

Just as Agricultural Experiment Stations help farmers produce better crops, so at Firestone factories tire improvements are developed by scores of engineers working in the extensive Firestone experimental laboratories.

Every step forward is founded on facts gathered in the most thorough testing methods known to the tire industry.

Throughout the year, Firestone operates a large fleet of test cars comprising representative types, from the largest to the smallest. One great fleet of 2500 taxicabs, Firestone equipped, totals more than a million tire miles per day, of severest service—all supervised by Firestone engineers and inspectors.

You should use only those tires which are being continually checked and proved by road test—tires whose known name and high reputation are demonstrated by millions of miles of records of superiority. See the nearest Firestone Dealer today.

The Feed that Makes 'Em Grow

Globe Growing Mash

If you want your young chicks to grow as you never had chicks grow before, feed them Globe Chick Starter for the first six weeks, then change to Globe Growing Mash. The results will surprise you. You'll have the fastest growth, finest developed flock you ever owned just like H. E. Dell of Caledonia, Mich., had. Read his letter:—

"I want to tell you of the success I had with Globe Feeds last season. In all my many years of experience with poultry, I have never had such results as I had last year with your good feeds. I raised 4,000 birds last Spring, using Globe Chick Starter and Globe Growing Mash. My losses were very small and the entire flock was better developed than any chickens I ever raised. At 8 weeks of age the cockerels were ready to market and in better condition than I ever had them before at 10 weeks of age. I got many more eggs from the pullets than in previous years, because they were in so much better condition. For these reasons, I shall in the future stick to Globe Feeds."

The reason Globe Growing Mash will make your birds grow faster, develop quicker is because 24 years of experience in manufacturing poultry feeds has taught us exactly what ingredients are necessary to produce BEST results, and we put them in Globe Feeds. Nothing but the BEST materials go into Globe Feeds and every bag is uniform—ALWAYS THE SAME. That's why Globe Feeds have become universally known as the BEST Feeds to Buy.

Over 400,000 successful poultry raisers have found that it pays and pays big to follow "The Globe Way" of raising poultry from shell to maturity. Why experiment? Feed Globe Feeds and MAKE SURE of the most profit from your flock.

"What Does This Mean?"

"It means Orange County Producers must meet this competition and prepare to do it quickly."

THE foregoing quotations are from an article in the Middletown (N. Y.) Times Press on "the prospects of an invasion of their territory by middle Western and Western milk.

The statement is very true and the way in which the competition can be met quickly and most effectively is in lowering the cost of production.

We have records of Eastern Dairies that have saved from 50c to $1.00 per 100 pounds in the cost of milk produced by their herd. This was accomplished through the use of Red Brand Tioga Dairy Feed and Tioga Mineral Food.

There is no better way to meet the competition and it will be worth your while to make the same saving. You can do it by using Tioga Dairy Feeds and Tioga Mineral Food as directed on tags attached to every bag.

If your dealer doesn't have Tioga Dairy Feeds or Tioga Mineral Food advise us and we will see that you are supplied.

On request we will be glad to send you copy of a letter to feeders on *"Who will control the market for milk"* written by Mr. A. C. Palmer, President of our company and which we believe you will find of interest.

TIOGA MILL & ELEVATOR CO., Waverly, N.Y.

TI-O-GA FEED SERVICE

The Big Four of a Perfect Silo

The *Unadilla* Silo provides convenience, safety, efficiency, profits, and satisfaction to its owners.

Silage Keeping Qualities

Air-tight—water-tight staves and doors. Feed settles compactly and cures evenly. Heating and fermenting processes aided by air-tight wood construction.

Strength

Sound, close grained, tight-jointed wood. Silo is firmly anchored to ground. Truly called a tower of strength.

Safety

Ladder formed by door fasteners—a great silo convenience and safety device. Hoops *start* and *end* at front. You can easily take up every hoop 12 inches at front.

Fine Appearance

Straight, graceful, outstanding—the Unadilla silo is an addition to any farm, however fine.

You'll never know real silo comfort until you have a Unadilla. It can be bought on easy terms if you like. There is a saving for you on early shipment orders with liberal discount for cash.

Send for our handsome, big, illustrated catalog telling you of all Unadilla advantages—also describing Unadilla storage tanks, water tubs and vats.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Milk Production and Health Most Important

THE dairyman need not be confused by conflicting claims regarding this or that protein theory. After all, his only concern is with results in milk and butterfat production and cow maintenance, not with the fine points of hair-line chemical analysis. Fortunately, feeding tests by a large number of experiment stations and individual dairymen give him a good result-basis for judgment, so that he need not depend on isolated cases for guidance. Those tests point the way to a safe and sane middle course, avoiding risky extremes.

A series of feeding tests at the Ohio Experiment Station, fully described in their Bulletin 389, "Protein Requirements of Dairy Cows," extended over fourteen years. These thoro and exhaustive tests show that the older feed standards call for unnecessarily large amounts of protein; that the actual maintenance and productive requirements of the dairy cow are less than those prescribed by these old standards. An amount of digestible protein only slightly greater than the protein content of the milk clearly appears to be adequate.

Protein a Supply of Material

It is well to remember the statement of Professor Armsby, late director of the Institute of Animal Nutrition of Pennsylvania College, that "protein is substantially a supply of material, and not a cause of production." He was obviously not in accord with those who hold that a dairy ration containing thirty-two per cent or twenty-four per cent protein must necessarily cause cows to make a greater flow than on a mixture of twenty per cent protein.

Another long series of experiments of the Vermont Experiment Station, covering thirteen years, determined that "a medium protein ration," year in and year out, "produced fully as much as a high protein ration." The "medium protein ration" of concentrates, as defined by this station, differs by only three quarters of one per cent or one per cent from a twenty per cent crude protein mixture.

Aside from the question of the effect of protein on milk production, there is the matter of health. Professor A. L. Haecker, a sound authority on feeding practice, says that too much protein "is a fruitful source of barrenness, shy breeding—and other disorders;" that "heavy feeding of highly nitrogenous feeds has injured many—great cows and their progeny," because of "abnormal stimulation and development of the digestive and mammary glands."

The Effects of Over-Doses

It is true that some cows may show temporary spurts of production under the influence of overdoses of protein. So will a man exhibit temporarily increased activity after a "shot" of certain drugs. But the after effects?

Dry cows, fed too much protein, often have caked or inflamed udders when they freshen, or a case of milk fever if natural heavy milkers. Those just fresh have in many herds shown the effect of excess protein by going off feed, which brings down production and the owner's profit as its first result.

Again, the "burning out" of extra good milkers by concentrates which are too highly nitrogenous—which is only another way of saying that they are too high in protein—is something all dairymen know of, either by experience or hearsay. These burned out cows, besides being spoilt as profitable milkers, are among the number that do not calve regularly, or else become sterile.—Arthur M. Parker.

Efficiency of Tuberculin Test

THAT the tuberculin test as now applied to dairy cattle is highly efficient in detecting the diseased animals in a herd and that the test is seldom misleading is strikingly illustrated by its use on the herd of Jersey cattle maintained at the New York State Experiment Station at Geneva, where 902 tuberculin tests have been made in the past twenty-five years with only three instances in which there was any doubt as to the accuracy of the test. Altho the test is not infallible, it proved to be more accurate in the station herd than it is generally acknowledged to be, declare the station authorities, who maintain that, when used as the veterinary profession recommends and when the results are interpreted properly, the test is reasonably accurate.

"During twenty-five years of tuberculin testing in the station herd, after the first lot of diseased animals had been detected and removed from the herd, only nine reactions indicating tuberculosis were secured in 902 tests," says a statement on the subject issued recently by the station authorities. "Tubercular lesions were found in the bodies of six of the reacting animals and thus verified the test.

"In the case of two of the reacting animals, no lesions could be found when the animals were slaughtered, and it is impossible to say definitely whether they were tubercular or not. The other reactor passed a retest and was not slaughtered until a year later when no tubercular lesions could be found. Thus, the test may have been at fault in a total of three cases out of 902 trials, certainly a very satisfactory record.

"Also, no diseased animal has ever passed the first test. Whenever an animal became tubercular, it gave the usual reaction and was immediately removed from the herd, thus keeping the herd free from the disease. By following this practice, no demonstrated case of tuberculosis has occurred in the station herd for the past twenty years."

Inter-State Milk Prices

THE Philadelphia price of milk, in effect April 1, as quoted by the Inter-State Milk Producers' Association, is as follows: For 3 per cent milk, basic quantity, $2.94 per 100 pounds; 6.3 cents per quart. Class 1, surplus, $2.22 per 100 pounds; 4.75 cents per quart. Class 2, surplus, $1.87 per 100 pounds; 4 cents per quart. The differential is 4 cents for each tenth point and 2 cents for each half tenth point up or down in butterfat test.

Doctoring the Lawn

SEVERE winter weather, with alternate freezing and thawing, frequently causes lawns to have a "sickly" appearance in the spring. If the grass is raised from the ground, as is often the case, the lawn should be rolled early while the ground is moist and soft. This will make the lawn smooth and will replace the grass that has been uprooted. Sometimes spots appear where the grass has been killed during the winter. These should be loosened up by raking and heavily seeded.

It is often a problem what fertilizer to use on lawns. The following is a mixture recommended by Dr. E. M. Gress, State Department of Agriculture:

Nitrate of soda....	3.5 pounds
Phosphoric acid....	5.0 pounds
Muriate of potash..	1.5 pounds

This mixture of ten pounds is sufficient to cover an area of 500 square feet. It should be spread evenly and care must be taken to avoid any scalding or burning of the grass.

Nitrate of soda dissolved in water and applied with a sprinkling can at the rate of about one-quarter pounds to 100 square feet of surface makes a good, quickly available fertilizer.

Application of Lime Valuable

Lime keeps the soil sweet and is especially valuable in maintaining the proper condition for the growth of soil organisms and the grass. It may be applied in the early spring at the rate of about twenty-five pounds of slaked lime to 1000 square feet of lawn.

When selecting lawn seed, either for reseeding or for making a new lawn, Dr. Gress warns against the purchase of cheap seed. If one does not have confidence in his own ability to select the seeds to be used, Dr. Gress advises him to go to a reputable dealer and buy the very best seeds that it is possible to get. These can not be bought at the rate of ten cents for a seven-ounce package as can be done in some of the stores in nearly every town or city in the state.

For a good mixture of grass seeds suitable for lawns in Pennsylvania, Dr. Gress advises the following:

	By weight
Kentucky blue grass.......	4 parts
Redtop	2 parts
Red fescue or Chewing's fescue	1 part
Creeping bent	1 part
Perennial rye grass	1 part
White clover	1 part

The seeds should be mixed and sowed evenly at the rate of about one pound to 200 square feet of surface.

Sweet Clover in Wheat

I would like to sow sweet clover in my wheat this spring. Would you kindly tell me how to sow it and how many quarts to the acre? I have been told sweet clover makes good hay, and is a soil builder.—W. R. B., Lycoming County, Pa.

Many farmers are successful in getting a stand of sweet clover by sowing it on wheat in the spring. Choose a time when the ground is well honey-combed by frost,—the same as for sowing red clover. Be sure there is plenty of lime in the soil and, if best results are to be secured that the proper bacteria are in the soil. If alfalfa has been grown on the field successfully the same bacteria will do for sweet clover. Otherwise, inoculation by culture or by spreading inoculated soil over the field is necessary. Most farmers when sowing it for the first time make their seed mixture to contain one-third or one-half of sweet clover seed so that in case of failure there will be a set of other grass. If sown alone use ten to fifteen pounds of seed per acre.—R. P. K.

No More SORE TEATS

Eliminate troubles of the udder and teats, and you are rid of one of the constantly occuring causes of short milk yield. Bag Balm has solved this problem on thousands of farms. Once used, you'll never be without it.

For most cuts, chaps and injuries to udder or teats Bag Balm effects a healing between milkings. This famous ointment has wonderful power of penetration and healing. It is compounded especially for use on the delicate tissues of udder and teats. For all inflammation, caked bag, bunches, cow pox, cracked teats, teats stepped on, etc. the relief is quick.

Big 10-ounce package, 60c., at feed dealers, general stores, druggists. If you have trouble getting Bag Balm order direct from us. Booklet, "Dairy Wrinkles," free on request.

1/2 Million Cows Milked the De Laval Way

THE De Laval Milker has now been on the market for almost ten years. During that time it has been put to every conceivable test and condition of use, and has made good in a remarkable way. With thousands in use, milking more than 500,000 cows twice a day every day in the year, it has proved beyond all question of doubt that it is better, faster, cheaper and cleaner than any other way of milking cows. Hand milking is rapidly becoming as old-fashioned as hand skimming of cream or harvesting grain with a cradle.

Lowest Cost Milk Ration

Sugared Schumacher Feed Plus Protein Concentrates

Your Cows Will Produce More A Big Saving In Feed Costs

Read this letter from R. L. Swanson & Son:—

HERSEY MEADOW FARM
R. L. Swanson & Son,
Auburn, Rhode Island *January 13, 1926*

The Quaker Oats Company:

About six months ago one of your salesmen called and advised a home mixed ration with SUGARED SCHUMACHER FEED as a base, which has averaged to save me eight dollars per ton.

My milk production has increased, feeding this ration and the cows are in excellent condition. The appearance of the cows' hair and skin has improved since we started feeding this ration—due to the molasses in SUGARED SCHUMACHER FEED.

My grain ration is composed of:

2 parts Cottonseed 43% *2 parts Gluten Feed*
2 " Bran *4 " SUGARED SCHUMACHER FEED*

(Signed) R. L. Swanson & Son

Lowest Cost—Greatest Production—Least Labor

Sugared Schumacher Feed supplies your cows with all the requirements for bodily maintenance and also adds to the food value of your high protein feeds by adding to their palatability and enriching their mineral content.

Let Sugared Schumacher help you reduce the cost of your milk production. Your dealer can supply you.

The Gospel of Good Feeding

This Book Says—

"Cows Need More Than Grass"

Your juicy spring pasture is good feed but it is not enough to produce a full flow of milk and maintain the condition of your cows at the same time. The Minnesota Cow Testing Associations have proved the truth of this:

Farmers owning 700 cows fed nothing but grass during spring and summer. Farmers owning 300 cows fed a grain mixture with pasture. They were all fed alike during the winter. The records for one year show the following amazing results:

	Pasture Only	Grain and Pasture
Number of cows	700	300
Butterfat per cow	238 lbs.	302 lbs.
Cost of feed per cow	$41.87	$49.85

The cows which had grain every day during the year produced 64 pounds of butterfat per cow more than those that had pasture alone. It is true that their feed cost was slightly more than pasture, but let's see about the net profit:

To 64 lbs. extra butterfat at 40c	$25.60
Less grain, per cow for pasture	7.48
Extra profit each grain fed cow	$18.12

You can duplicate this success and get these extra profits from your cows by giving them a Corn Gluten Feed ration when they go on pasture. They will stay fresh longer, and go into next winter in better condition.

This Valuable Book—Free

"The Gospel of Good Feeding" is a new book of 64 pages. It does away with guess work. It gives you the best of practical feed lot experience. It deals in a fair way with the 50 best known feeding materials and tells you why Corn Gluten Feed always makes a better ration.

More Frank Letters from Husbands and Wives

UNLESS she be an agriculturist, a horticulturist, a mechanic, a carpenter or blacksmith, and a business woman, I wish my wife would not interfere with my farming methods. When a stranger or neighbor drives into the yard I wish she would not worry, thinking I will buy something I do not need.

While she has all dishes, cooking utensils, a good cook stove, a one-pipe furnace, a piano, a phonograph, and all the furniture necessary to keep house, I wish she wouldn't interfere every time I wanted to buy improved seed or purebred stock or any machinery, or barn fixtures, because all these things are necessary to do up-to-date farming.

Intensive and Diversified Farming

I have no use for the in-the-old-rut farmer nor the woman who doesn't believe in the up-to-date farming. I believe in intensive, diversified farming. I wish my wife wouldn't interfere with this work because it takes all the energy I have to look after and manage a 215-acre farm.

In the spring of 1921 I had on my farm forty head of high-grade Holstein cattle, six good horses, twenty-three hogs and pigs, 115 hens and all the necessary farming tools, and because I wanted to dispose of some of the horses and buy a tractor my wife interfered. She caused a split in the family, or to make it more plain, between her and me, and the son (that I worked for thirty-eight years to get things fixed up and get an income established) is on the farm.

My wife at the age of sixty-five years, has her own fires to build, if she has something to eat, she eats alone, most of the time, and I, well, I am working at whatever I can get to do at the age of sixty-four years young, all because my wife wanted her own way and made it unpleasant for me in whatever I did.—A Pennsylvania Farmer.

Asks Too Many Questions

THESE are some things I wish my husband wouldn't ask me. He says: "What time is it?" instead of looking at the clock. "What day is it?" instead of looking at the calendar. "How cold is it?" instead of looking at the thermometer. "How do you spell cat?" instead of consulting the dictionary.

Even if I am reading, trying to take a nap or counting stitches in my crochet work he will say, "Where are my glasses?" "Did you see my gloves?" "What day did I set that yellow hen?" "How old is that spotted calf?"

So he goes on week after week asking unnecessary questions till I fairly hate the words, how, when, what, where and who.—Mrs. Y. Z.

A Chance to Get Even

NOW I call this a chance to get even with my wife for the things she said about me when she wrote about "Things I Wish My Husband Wouldn't Do."

When I come home from work in the evening, about supper time, I'm, as a general thing, so hungry I could eat dry chips. Well, what does my wife go and do but cook all the fancy dishes she knows how, and I eat and eat and eat till I just can't eat any more. Then I don't feel a bit good in about fifteen minutes. Now I wish my wife wouldn't do that. If she only cooked one thing one evening and then one the next, I wouldn't eat so much.

Another thing. When I'm real tired some nights and just enjoying a good snooze, I'm brought right out from the middle of it all by a jab in the ribs, and my wife in a faint whisper exclaims, "John, I'm sure I hear a burglar downstairs." I don't get a bit of peace until I shoulder my golf club and take my trusty six-shooter and tip-toe down stairs, and then after all its likely just the cat.

Well, I open the door and scare the cat out, and generally make such a racket it wakes Johnny Junior out of his sleep and he sets up a howl. Then, of course, its my job to get him to sleep again, which often means walking the floor for about half an hour, and that's no fun, nights as cold as this.—J. E. D.

Teases Cat, Dog and Wife

EXASPERATE is just what my husband does when around the house on stormy days or idle time in winter, when there is a cat or dog to tease. He will get the cat and pull its ears and rub its face just enough to make it meow. And the one we have now will meow, meow, if he just pats it on the back, and I am about ready to fly.

Then he will say, "I can do two things at once, tease the cat and make the Mrs. mad." And if it is a dog he will do something to make it bark and bark, and then laugh at me for saying I am ready to fly.

Then he will say, "Don't you wish I was away at work at something," as he is willing to help do anything he can on idle days. I told him I was going to write and he told me I did not dare.—Mrs. W. S., Pennsylvania.

Advice Is Not Wanted

THIS, I think, is my husband's most annoying fault. Our children, three boys and a girl, often pass an evening playing such games as parchesi, pit, snap or old maids. Frequently friends come in and they have, in their words, "Quite a time." Father is always asked to join in but generally refuses. However, just as soon as the game gets interesting he will stand back of someone and offer instructions as to how to play. The one helped usually wins, causing ill-feelings among the rest and giving rise to this remark, "You only won because father helped you."—A Worried Mother.

Golden Health Rules

Eat less, chew more.
Ride less, walk more.
Clothe less, bathe more.
Worry less, work more.
Idle less, play more.
Talk less, think more.
Go less, sleep more.
Waste less, give more.
Scold less, laugh more.
Preach less, practice more.

For every 100 people alive right now, thirty-six will die of preventable diseases before they reach sixty-five years of age. And the rest of them will be alive because they have practiced these ten Golden Rules.

Prices and Prospects

THE New York egg market was active during the week ending March 24 and the Easter demand was sufficient to keep the heavy supplies from accumulating. Prices advanced on both nearby and Pacific Coast stock. Poorer grades of nearby eggs were slow. Toward the close of the week there was a surplus of fancy selected stock and on Tuesday prices dropped. The Philadelphia egg market was firm and the best grades were active at higher prices.

Liberal supplies and a slow demand resulted in lower prices for live poultry during the week. Broilers were in more liberal supply but the demand was sufficient to take care of the offerings. Capons were in strong demand but old roosters were dull. Express fowl sold slowly and the express receipts of broilers were rather irregular.

There was a better demand for grain during the week. The domestic wheat market was more active and premiums advanced one to two cents at most markets. The corn market recovered from the sharp decline of the previous week, and prices made slight gains as the result of the good demand.

Highest Potato Prices

The highest prices of the season were reached on old potatoes toward the end of March and the highest prices for new potatoes since 1920. Pennsylvania round whites reached $7.75 per 150-pound sack on the Philadelphia market and Maine Green Mountains brought as high as $8.00. One of the sensations for the week was when U. S. No. 1 Spaulding Rose from Florida sold at $18.50 per barrel. Red skin potatoes from New Jersey jobbed out as high as $2.00 per five-eighths basket.

The shortage of northern stock and the delayed movement of southern potatoes advanced values rapidly at most markets. The decrease of 750 cars in the weekly shipments was due in part to lighter haulings because of bad roads in some sections. Spring thaws were occurring in some of the northern shipping sections and roads were almost impassable. Total shipments amounted to about 4000 cars, compared with 4700 cars last year.

Increase in Canadian Imports

Imports from Canada increased and the total Canadian imports to date exceeded 5000 carloads. Boston received 60 cars from Canada among its total arrivals of 315 cars for the week. As a result of the high prices prevailing in Philadelphia many states were represented in the receipts. Potatoes from Pennsylvania, Maine, New York, New Jersey, New Hampshire, Vermont, Michigan, Wisconsin, Minnesota, North Dakota, Idaho and Florida were offered on the market on April 1st. This is the largest number of states represented this season.

The butter market during the week has generally been a continuation of the unsatisfactory condition prevailing during the past month. Until the close of the week supplies of 92 score butter have been heavy with pressure to sell evident at all large markets, resulting in daily fractional declines. Buyers have not exhibited confidence in the situation and have limited purchases to immediate requirements, in this manner preventing clearance of heavy market receipts.

The large part that sentiment plays in determining the market trend was noticeable at the close of the week, March 31st. Advances of rather severe storms thruout the western producing territory changed the situation at Philadelphia from a weak market Tuesday afternoon at 40½c to a firm market at 41c, altho supplies on hand were still heavy.—W. R. Whitacre.

An EXTRA Month in the Barn ~ Puts EXTRA Milk in the Pail!

KEEP OFF THE GRASS ANOTHER MONTH

Some morning before long your pastures are going to spring into life; and as the grass shoots up—fresh, green and inviting—your natural thought is going to be, "Time to turn the cows out."

But wait! You will pay later for haste now—pay in lower milk production next fall and winter; pay heavily in poorer condition of your cows; pay in damage to your pasture.

Succulent, new grass is deceptive. True, it has a tonic effect on cows—stimulates both them and their milk flow for a while. But the increase won't keep up because tender spring grass is mostly water and cows can't eat enough grass to get the nourishment needed for milk production and body maintenance. Milk produced on a ration of grass alone is literally taken off the cow's back, and sooner or later you will pay the bill when the milk yield drops.

Further, the constant trampling of soft new pasture injures it immeasurably; close cropping tears and kills the tender grass roots. There is no surer way to ruin good pasture than to graze cows on it too early in the year.

Feed your cows their full ration of Larro for another month, and you protect your pasture and keep up steady milk production. Feed enough Larro throughout the summer to supply the food values that pasture lacks, and you not only maintain milk production now, but bring your cows into the fall season of highest milk prices in condition to earn the biggest possible profits.

Obey this warning of experience—keep off the grass—stay on Larro at least 30 days longer than your eyes tell you is necessary. This policy will pay you back two-fold.

Sale of 32 Registered Guernsey Cattle

at my farm on Hagerstown Middle and Greencastle pike, I will sell at public auction on Wednesday, April 21st at 11 o'clock my entire herd, consisting of 13 matured females, 9 bred and open heifers, 4 bulls, 6 bred heifers consigned by C. S. Walfinger. All federal accredited and free from contagious abortion. Write for catalog and details. Sales Manager, F. M. James, Purcellville, Va. Isaac M. Saer, Hagerstown, Md., R. No. 6.

PLEASE mention Pennsylvania Farmer when writing to our advertisers. They want to know and we want them to know that you read it all.

HOW LONG Will My Silo Last?

Will it get out of shape and eventually fall? Will it continually need repairs, meaning trouble and expense? Can I forget it or must I worry about tightening lugs or loops? Will it keep my silage in the proper succulent condition?

The Craine owner has no such worries. He simply uses his silo season after season without thought of its condition. It's a *strong, handsome, durable, weather-proof* and *frost resisting* structure that will *stand up* and *save money* for many years. Write today for catalog and descriptive literature.

Roof frame given without charge on silos delivered before May 10.

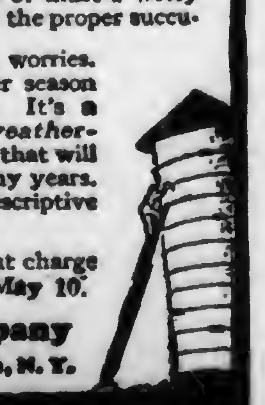
Box 140-B Norwich, N. Y.



CRAINE TRIPLE WALL SILOS
THE SILOS OF GIANT STRENGTH

ICE-BOUND HEARTS

By James Oliver Curwood

HOW THE STORY STARTED

AT POINT FULLERTON, 1000 miles north of civilization, Sergeant William MacVeigh concluded his semi-annual report to the commissioner of the Royal Northwest Mounted Police. "I have made every effort to run down Scottie Deane, the murderer. I have not given up hope of finding him, but I believe that he has gone from my territory. . . ." On his bunk in a corner of the little cabin lay his comrade, Private Pelletier, sick, almost to madness after nine months of loneliness.

Half an hour later MacVeigh set out for Fort Churchill, 450 miles across the ice to deliver the report, get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed brought word he'd seen a white man and woman ten miles south of the Maguse River. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. Billy promised to see her safely to her destination, the Little Seal. After pitching her tent he drew the box inside. When he awoke late next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane. There was a price on his head and fame for the man who captured him, but Scottie was more than an outlaw to Billy now.

Suddenly a team of dogs, a sledge, and three men came towards him out of the storm and the next thing he knew Bucky Smith, the corporal who hated Billy, had leveled a revolver at him. The party was in search of Scottie Deane. Tired out they rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. When he found them Scottie lay on a blanket by the fire, wounded. Bucky and his party arrived only a little later. The corporal insulted Isobel, there was a fight and Billy placed the offender under arrest. Bucky's parting words to Billy were threatening, "For this I'm going to kill you, MacVeigh." The party gone, Billy set off, alone, to Pelletier who was fighting madness in the cabin at Point Fullerton.

(Continued from last week)

AT LAST came the day when Pelletier gave up hope. He believed he was dying. He counted the marks on the door, and found that there were sixteen. Just that many days ago Billy had set off with the dogs. If all had gone well he was a third of the way back, and within another week would be home.

Pelletier's thin, fever-flushed face relaxed into a wan smile as he counted the pencil-marks again. Long before that week was ended, he figured that he would be dead. The medicines—and the letters—would come too late; probably four or five days too late. Straight out from his last mark he drew a long line, and at the end of it added, in a scrawling, almost unintelligible hand:

Dear Billy—I guess this is going to be my last day.

Then he staggered from the door to the window.

Out there was what was killing him—loneliness, a maddening desolation, a lifeless world that reached for hundreds of miles farther than his eyes could see. To the north and east there was nothing but ice, piled-up masses and grinning mountains of it, white at first, of a somber gray farther off, and then purple and almost black.

There came to him now the low, never-ceasing thunder of the under-currents fighting their way down from the Arctic Ocean, broken now and then by a growling roar as the giant forces sent a crack, like a great knife, thru one of the frozen mountains. He had listened to those sounds for five months, and in those five months he had heard no other voice but his own and MacVeigh's and the babble of an Eskimo. Only once in four months had he seen the sun, and that was on the morning that MacVeigh went south. So he had gone half mad. Others had gone completely mad before him.

THRU the window his eyes rested on the five rough wooden crosses that marked their graves. In the service of the Royal Northwest Mounted Police they were called heroes. And in a short time he, Constable Pelletier, would be numbered among them. MacVeigh would send the whole story down to her, the true little girl, a thousand miles south, and she would always remember him—her hero—and his lonely grave at Point Fullerton, the northernmost point of the law.

But she would never see that grave. She could never come to put flowers on it as she put flowers on the grave of his mother; she would never know the whole story—not a half of it; his terrible longing for a sound of her voice, a touch of her hand, a glimpse of her sweet blue eyes before he died. They were to be married in August, when his service in the Royal Mounted ended. She would be waiting for him. And in August or July word would reach her that he had died.

With a dry sob he turned from the window to the rough table that he had drawn close to his bunk, and for the thousandth time he held before his red and feverish eyes a photograph. It was a portrait of a girl, marvelously beautiful to Tommy Pelletier, with soft brown hair, and eyes that seemed always to talk to him and tell him how much she loved him. And for the thousandth time he turned the picture over and read the words she had written on the back:

My Own Dear Boy—Remember that I am always with you, always thinking of you, always praying for you, and I know, dear, that you will always do what you would do if I were at your side.

"Good Lord!" groaned Pelletier. "I can't die! I can't! I've got to live—to see her—"

He dropped back on his bunk, exhausted. The fires burned in his head again. He grew dizzy, and he talked to her, or thought he was talking—but it was only a babble of incoherent sound that made Kazan, the one-eyed old Eskimo dog, lift his shaggy head and sniff suspiciously. Kazan had listened to Pelletier's deliriums many times since MacVeigh had left them alone, and soon he dropped his muzzle between his fore-paws and dozed again.

A long time afterward he raised his head once more. Pelletier was quiet. But the dog sniffed, went to the door, whined softly, and nervously muzzled the sick man's thin hand. Then he settled back on his haunches, turned his nose straight up, and from his throat there came that wailing, mourning cry, long-drawn and terrible, with which Indian dogs lament before the teepees of masters who are newly dead. The sound aroused Pelletier. He sat up again, and he found that once more the fire and the pain had gone from his head.

"Kazan, Kazan," he pleaded weakly, "it isn't time—yet!"

Kazan had gone to the window that looked to the west, and stood with his forefoot on the sill. Pelletier shivered.

"Wolves again," he said, "or mebby a fox."

He, too, had grown into that habit of talking to himself, which is as common as human life itself in the far north, where one's own voice is often the one thing that breaks a killing monotony. He edged his way to the window as he spoke, and looked out with Kazan.

Westward there stretched the lifeless barren, illimitable and void, without rock or bush, and overhung by a sky that always made Pelletier think of a terrible picture he had once seen of Dore's "Inferno." It was a low, thick sky, like purple and blue granite, always threatening to pitch itself down in terrific avalanches; and between the earth and this sky was the thin, smothered world which MacVeigh had once called God's insane asylum.

Thru the gloom Kazan's one eye and Pelletier's feverish vision could not see far, but at last the man made out an object toiling slowly toward the cabin. At first he thought it was a fox, and then a wolf; and then, as it loomed larger, a straying caribou. Kazan whined. The bristles along his spine rose stiff and menacing. Pelletier stared harder and harder, with his face pressed close against the cold glass of the window, and suddenly he gave a gasping cry of excitement.

IT WAS a man who was toiling toward the cabin! He was bent almost double, and he staggered in a zigzag fashion as he advanced. Pelletier made his way feebly to the door, unbarred it, and pushed it partly open. Overcome by weakness, he fell back then on the edge of his bunk.

It seemed an age before he heard steps. They were slow and stumbling, and an instant later a face appeared at the door. It was a terrible face, overgrown with beard, with wild and staring eyes—but it was a white man's face. Pelletier had expected an Eskimo, and he sprang to his feet with sudden strength as the stranger came in.

"Something to eat, mate—for the love o' God give me something to eat!"

The stranger fell in a heap on the floor, and stared up at him with the ravenous entreaty of an animal. Pelletier's first move was to get whisky, and the other drank it in great gulps. Then he dragged himself to his feet, and Pelletier sank in a chair beside the table.

"I'm sick," he said. "Sergeant MacVeigh has gone to Churchill, and I guess I'm in a bad way. You'll have to help yourself. There's meat —'n' bannock—"

Whisky had revived the newcomer. He stared at Pelletier, and as he stared he grinned, ugly yellow teeth leering from between his matted beard. The look cleared Pelletier's brain. For some reason which he could not explain his pistol-hand fell to the place where he usually carried his holster. Then he remembered that his service-revolver was under his pillow.

"Fever," said the sailor, for Pelletier knew that he was a sailor.

He took off his heavy coat and tossed it on the table. Then he followed Pelletier's instructions in quest of food, and for ten minutes ate ravenously. Not until he was thru, and seated opposite him at the table, did Pelletier speak.

"Who are you, and where in Heaven's name did you come from?" he asked.

"Blake—Jim Blake's my name, an' I come from what I call Starvation Igloo Inlet, thirty miles up the coast. Five months ago I was left a hundred miles farther up to take care of a cache for the whaler John B. Sidney, and the cache was swept away by an overflow of ice. Then we struck south—hunting and starving—me 'n' the woman—"

"The woman!" cried Pelletier.

"Eskimo squaw," said Blake, producing a black pipe. "The cap'n bought her to keep me company—paid four sacks of flour an' a knife to her husband up at Wagner Inlet. Got any tobacco?"

PELLETIER rose to get the tobacco. He was surprised to find he was steadier on his feet, and Blake's words were clearing his brain. That had been his and MacVeigh's great fight—the fight to put an end to the white man's immoral trade in Eskimo women and girls—and Blake had already confessed himself a criminal. Promise of action—quick action—momentarily overcame his sickness. He went back with the tobacco, and sat down.

"Where's the woman?" he asked.

"Back in the igloo," said Blake, filling his pipe. "We killed a walrus up there and built an ice-house. The meat's gone. She's probably gone by this time." He laughed coarsely across at Pelletier as he lighted his pipe. "It seems good to get into a white man's shack again.

"She's not dead?" insisted Pelletier.

"Will be—shortly," replied Blake. She was so weak she couldn't walk when I left. But them Eskimo animals die hard—'specially the women."

"Of course, you're going back for her?"

The other stared for a moment into Pelletier's flushed face, and then laughed as tho he had just heard a good joke.

" Not on your life, my boy. I wouldn't hike that thirty miles again—an' thirty back—for all the Eskimo women up at Wagner."

The red in Pelletier's eyes grew redder as he leaned over the table.

"See here," he said., "you're going back—now! Do you understand? You're going back!"

Suddenly he stopped. He stared at Blake's coat, and with a swiftness that took the other by surprise he reached across and picked something from it. A startled cry broke from his lips. Between his fingers he held a single strand of hair. It was nearly a foot long, and it was not an Eskimo woman's hair. It shone a dull gold in the gray light that came thru the window. He raised his eyes, terrible in their accusation of the man opposite him.

"You lie!" he said. "She's not an Eskimo!"

Blake had half risen, his great hands clutching the ends of the table, his brutal face thrust forward, his whole body in an attitude that sent Pelletier back out of his reach. He was not an instant too soon. With an oath Blake sent the table crashing outside, and sprang upon the sick man.

"I'll kill you!" he cried. I'll kill you, an' put you where I've put her, 'n' when your pard comes back I'll—"

His hands caught Pelletier by the throat, but not before there had come from between the sick man's lips a cry of "Kazan! Kazan!"

WITH a snarl the old, one-eyed sledge-dog sprang upon Blake, and the three fell with a crash upon Pelletier's bunk. For an instant Kazan's attack drew one of Blake's powerful hands from Pelletier's throat, and, as he turned to strike off the dog, Pelletier's hand groped out under his flattened pillow. Blake's murderous face was still turned when he drew out his heavy service-revolver, and as Blake cut at Kazan with a long sheath-knife, which he had drawn from his belt, Pelletier fired. Blake's grip relaxed. Without a groan he slipped to the floor, and Pelletier staggered back to his feet. Kazan's teeth were buried in the sailor's leg.

"There boy," said Pelletier, pulling him away. "That was a close one."

He sat down and looked at Blake. He knew that the man was dead. Kazan was sniffing about the sailor's head, with stiffened spines. And then a ray of light flashed for an instant thru the window. It was the sun—the second time that Pelletier had seen it in four months. A cry of joy welled up from his heart. But it was stopped midway. On the floor, close beside Blake, something glittered in the fiery ray, and Pelletier was upon his knees in an instant.

It was the short golden hair he had snatched from the dead man's coat, and partly covering it was the picture of his sweetheart, which had fallen when the table was overturned. With the photograph in one hand and that single thread of woman's hair between the fingers of his other, Pelletier rose slowly to his feet and faced the window. The sun was gone. But its coming had put a new life into him. He turned joyously to Kazan.

"That means something, boy," he said in a low, awed voice; "the sun, the picture, and this. She sent it; do you hear, boy? She sent it! I can almost hear her voice, an' she's telling me to go. 'Tommy," she's saying, 'you wouldn't be a man if you didn't go, even tho you know you're going to die on the way. You can take her something to eat,' she's saying, boy, 'an' you can just as well die in an igloo as here. You can leave word for Billy, an' you can take her grub enough to last until he comes, an' then he'll bring her down here, an' you'll be buried out there with the others—just the same.' That's what she's saying, Kazan, so we're going!"

He looked about him a little wildly.

"Straight up the coast," he mumbled. "Thirty miles. We might make it, old boy."

He began filling a pack with food. Outside the door there was a small sledge, and after he had bundled himself in his traveling clothes, he dragged the pack to the sledge, and behind the pack tied on a bundle of firewood, a lantern, blankets, and oil. After he had done this he wrote a few lines to MacVeigh, and pinned the paper to the door. Then he hitched old Kazan to the sledge, and started off, leaving the dead man where he had fallen.

"It's what she'd have us do," he said again to Kazan. "She sure would have us do this, Kazan—God bless her dear little heart!"

Pelletier hung close to the ice-bound coast. He traveled slowly, leading the way for Kazan, who strained every muscle in his aged body to drag the sledge. For a time the excitement of what had occurred gave Pelletier a strength which soon began to ebb. But his old weakness did not entirely return. He found that his worst trouble at first was in his eyes.

Weeks of fever had enfeebled his vision until the world about him looked new and strange. He could see only a few hundred paces ahead, and beyond this little circle everything turned gray and black. Singularly enough, it struck him that there was some humor as well as tragedy in the situation, that there was something to laugh at in the fact that Kazan had but one eye, and that he was nearly blind. He chuckled to himself, and spoke aloud to the dog.

(To be continued next week)

There are about 600 mills grinding flour and feed in Pennsylvania. Keystone State millers are learning that, by proper use of Pennsylvania wheat, they can make bread flour as good or better than western flour.

Cut Milk Production Costs with a New Harder Silo

Twelve ordinary grade cows at the Illinois Experiment Station averaged 8,313 lbs. milk in one year, without grain. They were fed on silage and alfalfa. Prof. Savage advises Eastern dairymen to cut production costs by growing more silage and legumes and buying fewer concentrates.

In order to help carry out this money-saving, profit-making plan, we offer the improved Harder Silo with the patented Harder-Victor Front on very easy terms. After a small first payment, your cows will take care of the remaining payments through greater production and lower feed cost. You simply cannot afford to go without a silo when you can get a genuine Harder on such easy terms. Even if you have one silo, you probably need another.

Let Us Send You "Saving with Silos"

We haven't room here to explain all the good points of this strictly high-grade Silo, but we'll gladly send you "Saving with Silos", *free.* It explains the scientific principles of silage making and illustrates the details of Harder construction. Ask also for particulars of our easy-payment plan that makes a Harder pay for itself.

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—Last week's mail brought me one particularly interesting letter. Here it is:

"We are constantly speaking of improving the Forum so I have often wondered whether we couldn't have a 'Nature Lovers' Club' on our page. I believe all Forum members are lovers of nature and such a club would be interesting and helpful. We could send in letters, stories and poems pertaining to nature; the hills, woods, flowers, animals and birds. We could send in snap-shots of unusual scenery and tell about our experiences on a trip to the woods or fishing.

"I wonder what Cousin Ruth and Forum friends think of this plan."—"Mary Sunshine."

Of course, Mary's last name isn't really Sunshine, but because that is what her friends at home call her we'll call her that, too.

I think Mary's ideas are good. What you think of them she and I will learn from your contributions to the next contest and to the Nature Lovers' Corner that we'll have during the summer—perhaps all thru the year.

To start the idea off with a "bang" we'll have a contest. Everybody send in a snapshot of his or her favorite pet, together with a short story about it. As last time there'll be six prizes, three for the boys and girls twelve years old and over, and three for the boys and girls under twelve. A camera will be awarded as first prize to the winner in each group, a fountain pen as second and a schoolbox outfit as third.

Nearly all of you have a pet of some kind—a dog, a cat, a horse, a cow, or perhaps a flying squirrel or an owl—whatever it is, tell us why you like it best, about its tricks, its name, how long you've had it and all the other interesting things there always are to tell about anything we're particularly fond of.

Write the short story of your pet on a separate sheet of paper, putting your name, age and full address (including the county) in the upper right hand corner and in the left corner the word "Contest." All pictures should be clear (only clear ones can be used on the page). Your contributions will be judged upon the pictures and upon the interest, neatness and spelling of the account of your pet sent with the picture. All contributions should be addressed: Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa., and should reach me by April 24th.

During the summer when we're "vacationing" about the country, either on long or short trips, we'll be able to follow out Mary Sunshine's last suggestion. We all have different things happening to us all the time, at home or in school, at play or at work, and those are the things other folks like to hear about. Those who write letters telling those "different" things are the ones who receive the Forum membership pin. Have you yet received yours?

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I wish Cousin Ruth could see our farm here at Glade Mills. From our house you can see Glade Run Creek where my chums and I go fishing and swimming in the summertime. Our swimming hole is not very deep but we enjoy it anyhow. We went fishing nearly every day last summer. We always go fishing on Good Friday for school is let out early and some people say fish are easy to catch then.—Mary S. Graham, fifteen, Butler County, Pa.

Dear Cousin Ruth:—I deliver papers every morning. I have a brother and he joined the navy. I wish I were a boy so I could join with him. I have no sisters—Clara Powell, fifteen, Burlington County, N. J.

Dear Cousin Ruth and Forum Friends:—We live on a farm. I help my sister milk the cows every night and morning. My father runs a coal mine. He has a donkey.

I wish you could be with us on the farm.

I like to embroider. I embroidered a cushion top for mother's Christmas present.—Irma Smeal, Clearfield County, Pa.

'NEATH LEAFY BOUGHS
Alice P. Driver, Montgomery County, Pa.

Dear Cousin Ruth:—One evening as I was sitting in my room trying to wear off the blues I thought I'd like to write a poem, but the question was "What would I write about?" Then I looked over at a picture on the wall and found what I was wanting. It was a picture of two boys, one of ancient times and the other a modern college student. Below the two boys was this word, "Youth," so I took my pen and did my best. Here it is:

YOUTH

Youth with its laughter and dancing feet,
Youth with its joy and song,
There's a joy for every sorrow we meet
As thru life we pass along.

It sparkles like fairy snow flakes,
That dance in the winter air,
It flirts with the summer sunbeams
That are playing everywhere.

Ancient youth and modern youth,
They all wear the same sweet smile,
But the youth that lives forever
Is the youth that is worth while.

We can always be youthful in spirit,
But as the years go rolling by
From our cheeks goes the flush of the roses
And the twinkle goes from our eye.

But if everything was just fancy
And nothing at all was true,
And youth would be just a day dream,
I wonder what we would do?

But since everything is not fancy
And youth is not a dream
Let us live as we always lived
And youth will reign supreme.

—Nancy Shaffer, (X), Clarion County, Pa.

Dear Cousin Ruth and Forum Friends:—Summer is a nice time in the country for me. We all enjoy planting flowers. Oh, Cousin Ruth, I wish you were over here in the summer for the flowers smell so sweet and the air feels so fresh that I like the smell of it. The only thing that I don't like is the mosquitoes. I am sending a recipe:

PEANUT COOKIES

2 tablespoons fat
1 cup sugar
2 well-beaten eggs
2 cups flour
½ teaspoon salt
1 cup chopped peanuts
2 teaspoons baking powder
½ cup milk
½ teaspoon of lemon juice

Cream the fat, add sugar gradually, add well-beaten eggs. Mix and sift baking-powder, salt and flour; add to first mixture. Then add milk, peanuts and lemon juice.

Drop from tip of a spoon on a greased pan one inch apart. Place half a peanut on top of each. Bake twelve to fifteen minutes in a slow oven.—Mamie Kolodchak (X), Cumberland County, N. J.

Pauline L. Wible, Fulton Co., Pa. Arline Robbins, Wayne Co., Pa.

Dear Cousin Ruth:—I received the Forum membership pin. It is very attractive. Thank you. It is soon time to dig the garden. Cousin Ruth, have you dug your garden? It is very warm the last few days.

We have good times in school these warm days. We have twenty-nine scholars. We play hide-and-go-seek. We have an hour for dinner. We girls change hats and coats and they don't know who it is. They come close to us to tell who it is then we run and get free. They count to a hundred. Then they say: "Bushel rea, bushel rie, who's not ready holler I." Then if we are not ready they hold till we are ready.

We have penmanship every Friday and sometimes drawing. If the teacher does not have enough time to let us draw she reads us stories until it is time to let out school.

We are getting some peeps. That will give me work. I wish some of you city girls were here sometime to help play and see the peeps and go for blackberries, raspberries and strawberries.—Helen D. Holley, ten (X), Lebanon County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You can find out what this strange thing is by drawing straight lines from the dot beside the figures. This is how to go about it: Draw from the dot beside "1," to the dot beside "2," to the dot beside "3;" from "4" to 5;" from "6" to "7" to "8;" from "9" to "10;" from "11" to "12" to "13" to "14." When you have found the answer, send it to me on a POSTCARD so it reaches me by April 17th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance will each be awarded a set of pictures.

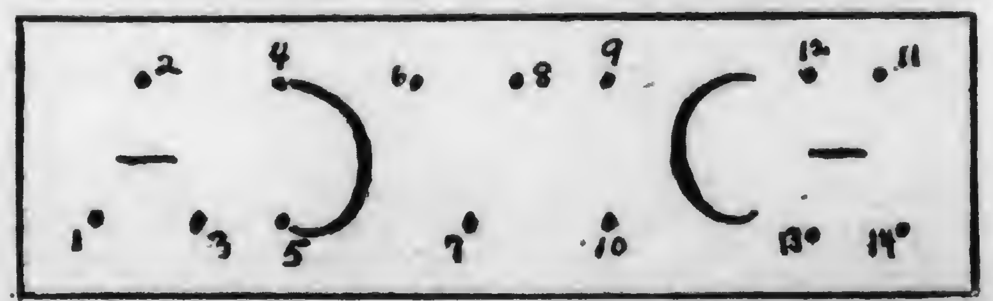
The Honor Prizes, bright and shiny pencils with a supply of leads, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Mistakes in spelling, punctuation, and failure to mention your age every time are only a few of the many errors that are made weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

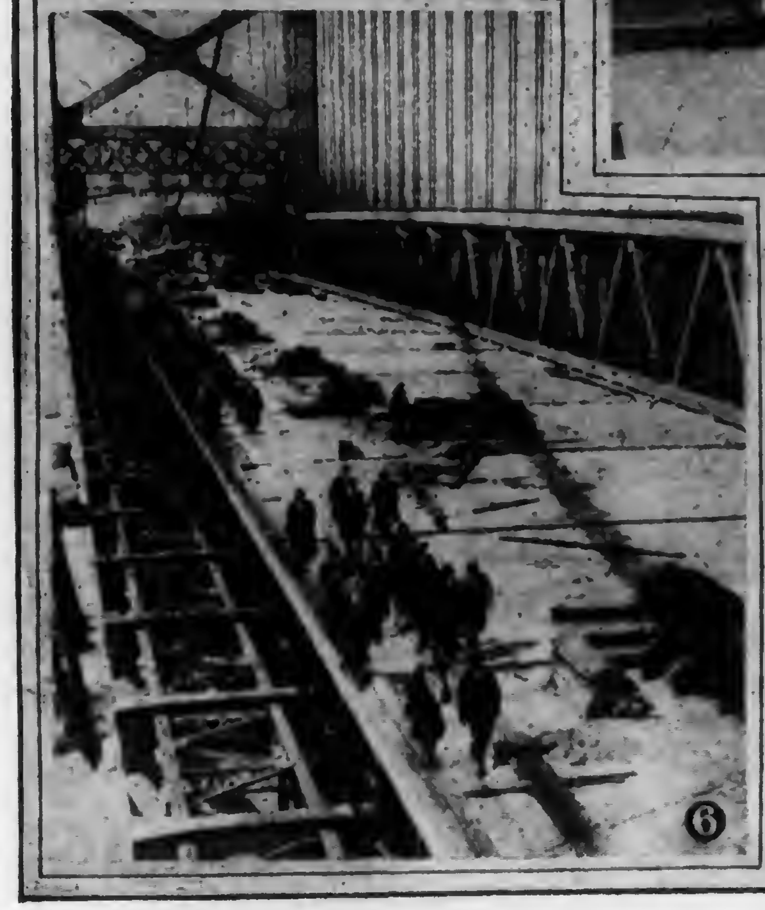
The answer to the puzzle published in the March 20 issue of Pennsylvania Farmer is: CAT.

The puzzle prize winners are: Roy Bauer, age 10, Fannettsburg, Pa.; Raymond Brower, age 11, Dawson, Pa.; Elenor Ezerinsky, age 11, Harmarville, Pa.; Walter Goff, age 6, Eldora, N. J.; Eleanor Goss, age 10, First Fork, Pa.; Ruth Gregory, age 7, Weatherly, Pa.; Helen Hershey, age 7, Lancaster, Pa.; Mary Hubley, age 8, Silver Spring, Pa.; Everett Murphy, age 8, Blackwood, N. J.; Vincent Shelly, age 9, Quakertown, Pa.

What Is It That We All Like to Give But Few of Us Like to Take?



PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Forty-six states and six foreign countries are represented by this group of children, all pupils of one school in Florida. They claim that no other school in the country can boast of such a record.

2.—These young women in the Bureau of Plant Industry, Washington, are studying worms which cause great damage to crops.

3.—Now is the time to put up birdhouses! Here are several models.

4.—Looking north on Michigan Avenue, Chicago, from the south end of the link bridge.

5.—A picturesque spot in Sinclair Canyon, Kootenai National Park, Idaho, where threatening masses of rock overhang the road.

6.—On March 19 the new Delaware River Bridge between Philadelphia and Camden was officially inspected by a group of 250 persons, headed by Governor Pinchot, of Pennsylvania, and Governor Moore, of New Jersey.

7.—The President and his party leaving the house where Colonel Coolidge died shortly before their arrival.

OUR YOUNG PEOPLE'S FORUM

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—Last week's mail brought me one particularly interesting letter. Here it is:

"We are constantly speaking of improving the Forum so I have often wondered whether we couldn't have a 'Nature Lovers' Club' on our page. I believe all Forum members are lovers of nature and such a club would be interesting and helpful. We could send in letters, stories and poems pertaining to nature; the hills, woods, flowers, animals and birds. We could send in snap-shots of unusual scenery and tell about our experiences on a trip to the woods or fishing.

"I wonder what Cousin Ruth and Forum friends think of this plan."—"Mary Sunshine."

Of course, Mary's last name isn't really Sunshine, but because that is what her friends at home call her we'll call her that, too.

I think Mary's ideas are good. What you think of them she and I will learn from your contributions to the next contest and to the Nature Lovers' Corner that we'll have during the summer—perhaps all thru the year.

To start the idea off with a "bang" we'll have a contest. Everybody send in a snapshot of his or her favorite pet, together with a short story about it. As last time there'll be six prizes, three for the boys and girls twelve years old and over, and three for the boys and girls under twelve. A camera will be awarded as first prize to the winner in each group, a fountain pen as second and a schoolbox outfit as third.

Nearly all of you have a pet of some kind—a dog, a cat, a horse, a cow, or perhaps a flying squirrel or an owl—whatever it is, tell us why you like it best, about its tricks, its name, how long you've had it and all the other interesting things there always are to tell about anything we're particularly fond of.

Write the short story of your pet on a separate sheet of paper, putting your name, age and full address (including the county) in the upper right hand corner and in the left corner the word "Contest." All pictures should be clear (only clear ones can be used on the page). Your contributions will be judged upon the pictures and upon the interest, neatness and spelling of the account of your pet sent with the picture. All contributions should be addressed: Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa., and should reach me by April 24th.

During the summer when we're "vacationing" about the country, either on long or short trips, we'll be able to follow out Mary Sunshine's last suggestion. We all have different things happening to us all the time, at home or in school, at play or at work, and those are the things other folks like to hear about. Those who write letters telling those "different" things are the ones who receive the Forum membership pin. Have you yet received yours?

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I wish Cousin Ruth could see our farm here at Glade Mills. From our house you can see Glade Run Creek where my chums and I go fishing and swimming in the summertime. Our swimming hole is not very deep but we enjoy it anyhow. We went fishing nearly every day last summer. We always go fishing on Good Friday for school is let out early and some people say fish are easy to catch then.—Mary S. Graham, fifteen, Butler County, Pa.

Dear Cousin Ruth:—I deliver papers every morning. I have a brother and he joined the navy. I wish I were a boy so I could join with him. I have no sisters—Clara Powell, fifteen, Burlington County, N. J.

Dear Cousin Ruth and Forum Friends:—We live on a farm. I help my sister milk the cows every night and morning. My father runs a coal mine. He has a donkey.

I wish you could be with us on the farm.

I like to embroider. I embroidered a cushion top for mother's Christmas present.—Irma Smeal, Clearfield County, Pa.

'NEATH LEAFY BOUGHS
Alice F. Driver, Montgomery County, Pa.

Dear Cousin Ruth:—One evening as I was sitting in my room trying to wear off the blues I thought I'd like to write a poem, but the question was "What would I write about?" Then I looked over at a picture on the wall and found what I was wanting. It was a picture of two boys, one of ancient times and the other a modern college student. Below the two boys was this word, "Youth," so I took my pen and did my best. Here it is:

YOUTH

Youth with its laughter and dancing feet,
Youth with its joy and song,
There's a joy for every sorrow we meet
As thru life we pass along.

It sparkles like fairy snow flakes,
That dance in the winter air,
It flirts with the summer sunbeams
That are playing everywhere.

Ancient youth and modern youth,
They all wear the samo sweet smile,
But the youth that lives forever
Is the youth that is worth while.

We can always be youthful in spirit,
But as the years go rolling by
From our cheeks goes the flush of the roses
And the twinkle goes from our eye.

But if everything was just fancy
And nothing at all was true,
And youth would be just a day dream,
I wonder what we would do?

But since everything is not fancy
And youth is not a dream
Let us live as we always lived
And youth will reign supreme.
—Nancy Shaffer, (X), Clarion County, Pa.

Women Need Avocations

They Make Life Richer and More Interesting

I AM old fashioned enough to believe that woman's real vocation should be homemaking and motherhood—but that need not interfere at all with a woman having an avocation.

In fact, I am quite prone to believe than an avocation tends to make a woman a better mother and homemaker. Then there come all too soon the years when the children are grown up and gone, and the woman's vocation does not fill her life completely. Here is where an avocation functions beautifully.

I realize that the mother who has her family of children, and who does her share towards successful farming has her hands pretty full, and that there does not seem to be much available time for riding a hobby.

But I know, too, from actual experience, that if there is the lure of an avocation ahead the busy mother will somehow manage to hurry up the work—will somehow manage to cut corners and make time for the avocation. Thus there will be an added zest to living—and the family of this mother will be benefited.

Rides Her Hobby Hard

I came to a time when I decided that I needed an avocation—and I have been riding my hobby hard in spare time ever since. The thing that appeals to me and that I enjoy particularly you might not be interested in at all. But if you dig hard enough beneath the outer surfaces into the subconscious field you will find there is one thing you enjoy particularly—and that you have never had enough time for.

Several years ago I knew a delightful farm woman who was not only a beautiful housekeeper but a real homemaker in every sense of the word. I spent many delightful hours in that woman's home. I did not know her long before I learned that she had a hobby—and she rode it hard. It was amateur photography.

That avocation would not appeal to me at all. But this woman enjoyed it—she read books on it—she became quite proficient.

Incidentally her avocation made her quite a little money on the side. It was understood among her neighbors that she would take pictures for a certain amount, and many of them preferred her snaps of the children to a photographer's, because she succeeded in getting more true-to-life poses.

Better Mother and Homemaker

Then this woman learned that there was a field for good farm pictures containing children. She was able to sell some of her snapshots to farm papers. Certainly this hobby on the side made this woman a more interesting conversationalist, made her a better mother and made her a better homemaker because it broadened her. It gave her a vital interest outside the walls of her home.

If you enjoy making the hooked rugs that we read about in Pennsylvania Farmer, why not make some to sell? There are usually city women who are anxious to buy that type of rug.

I know another woman who has diligently studied birds all the years of her married life. She has become quite an authority on birds. She was called in to the local schools first to talk to the children about birds and their habits. She was called to neighboring towns—one thing led to another—and now her children are grown up and gone from home so she is not tied so closely to home, and can go about all over the state talking birds. This hobby has led her into interesting experiences and made her a very interesting woman.

It seems to me commendable to become interested in something that may make some extra money. But the big point is that an avocation makes life so much more interesting, makes one a better mother and housewife and better able to follow one's vocation satisfactorily.—May H. Mumaw, Ohio.

For Better Babies

THE mother stands between her baby and nutritional disaster. During pregnancy and the nursing period the material to build the baby comes either from the mother's food or from the stores she has accumulated in her own body. In case of food shortage the mother suffers first. If necessary she pays for the health of her child with her own flesh and blood and teeth. A comment upon the inadequacy of the feeding of mothers in the past is the adage, "For every child a tooth." Fortunately, with the right food and dental supervision this need no longer be true.

A woman may live in fair health on a diet upon which she can not properly nourish a baby either before or after birth. But even with a properly balanced diet her ability to supply the right sort of material for the baby's growth has a limit. Her power to do this successfully depends on:

1. Her general health and state of nutrition before conception.

2. The amount, kind, and adequacy of her food. If her food cannot supply the child's need her body must.

3. The length of time she supports the growth of the child, both before and after birth. This is often at least eighteen months.

Inadequate feeding during pregnancy or the nursing period may lead to the physical depletion of the mother or prevent the normal growth of the baby.

On a Stormy Day

TRY this with the little folks when it is not pleasant for them to play outside. Cut pictures from old magazines and catalogs, then take an old wall paper sample book and paste them on the different pages of the book. For one page make a bedroom. Paste on it plenty of windows, and the various pieces of furniture used in the bedroom. On another page arrange a kitchen with cuttings of windows, stove, table, stool, cabinet, and perhaps a busy mother baking pies. Make a play-room page, just full of books neatly shelved, block-houses, dolls, animals and teddy bears. Then dreaming of spring sunshine, make some out-of-door pages with flowers in gay bloom, butterflies, bees, and birds: a big barn surrounded with horses, cows, pigs, the family cat and the good watch dog; and don't forget to plan a fine chicken yard with mother biddy, her happy flock of little peep-peeps, and proud old cock-a-doodle. These few ideas are merely suggestive. The plan has endless possibilities.—Lake-Wolverton, N. J.

Prize Winning Hints

I SAVE a lot of money and considerable time both in making and laundering a garment, by using a contrasting color of the same material for trimming. I use it in finishing the garment rather than as an adornment.

For example, on a dress of plaid gingham I place a shaped cuff of plain gingham; this is sewed to the bottom of the sleeve with the seam on the right side, then the edge is turned and pressed smooth with a hot iron and the top of the cuff is stitched to the sleeve. This appliqued cuff makes an attractive and quick finish and can be ironed easily. The neck finish is made in exactly the same way and with fancy pockets and belt this makes a pretty dress.

Generally the trimming material can be found in the piece-bag at no additional expense. This is worth considering because it is very easy to have the trimming cost as much as the material for a cotton garment.

I finish slips, nightgowns and aprons in the same way with colored bands and hems. Such trimming wears as long as the garment.—Alice Margaret Ashton, N. Y.

Now Is the Time

The Oil Stove

IF THE oil stove was not thoroly cleaned last fall, give it a general "once-over." Make it perfectly clean inside and out. Sandpaper or steel wool will clean the burners, vinegar will cleanse the oil pipes. New burners and lighters are not costly, and a coat of enamel will make it look like new. Cut new asbestos for the bottom of the oven, and you are ready for the first hot day.

The Refrigerator

The interior must be spic and span or food will become contaminated. Get that special enamel and after the thoro scrubbing, give it a new lining of enamel.

Porch Furniture

Some nice day do this task out-of-doors. After the thoro scrubbing, if it is wood furniture, paint it instead of varnishing. Black, battleship gray, or soft shades of green are good colors. Use gay-colored cretonne for cushions and you have made attractive furniture. Do keep the color of your house paint in mind when you choose paint for these accessories.

Wicker furniture can be scrubbed also and may be painted, enameled, or varnish stained.

The Screens

Screen frames need a new coat of paint, and the wire screening should be given a coat of hot boiled linseed oil containing some powdered resin, fully dissolved. Apply sparingly with a paint brush.—Mrs. George Gray, N. Y.

Old Hydrangea Blooms Again

FRIEND Gardener strolled across our lawn late one afternoon. He paused beside our once-fine large Paniculata Grandiflora and offered his advice. "It's good as dead. If 'twere mine I'd grub it up—throw it away; re-plant with another—it's the only way!"

A few inches above the earth, its body was cracked, scaly and decayed; its branches looked sick, its leaves lifeless and there were no blossoms. The thought of grubbing it out gave us a sharp pain. We decided if it was death any way, we'd try our hand, first.

A mass of perfect flowers.

Next morning we snipped off broken twigs, removed dead leaves and entangled odd branches. We dug up the soil about it, carefully, not damaging the roots. We opened it—much as a surgeon does a wound with his scalpel—very near the diseased body and poured down a generous quantity of manure water. Then we drew the earth over that and carried more from the garden, banking it entirely up and over the cracked, bursted portion. This was well firmed into position and covered with lawn clippings making a tiny hill.

After the first sharp freeze, we scattered poultry droppings thickly all about it, being careful not to touch any of the real body, lest it burn.

In January, ere leaf buds were opening, we pruned it most severely. When warm, rejuvenating spring suns, breezes and showers trailed by, they left a very dense, dwarf, clumpy bush with bright, healthy, gay, green leaves that diligently kept reaching skyward bit by bit.

By the time we had lived our way to those August nights when we sat together on the moonlit porch, we were enjoying its flower wands on well lengthened stems, conspicuous and effective, ours again—selfishly reclaimed.

In the picture you see how it appeared to us—first snowy white, then pink, then reddish bronze and green until late autumn. Only you just have to imagine the color beauty—the camera withheld that. —Gertrude Shockey, Ohio.

Give Them a Place to Play

Children Shouldn't Starve for a Yard That's Green

ONE sultry evening last August, a fine large touring car with six rollicking youngsters and their parents, entered our driveway. While their egg order was being made up, the tiniest tot (just learning to walk) kept begging and pleading for something. I asked the mother what the child wanted, and she replied, "Oh, only to get out on your lawn! We haven't a blade of grass at home."

I urged them to take the time to give her a little frolic, and what a good time that group of six did have on our stretch of green! The older boys turned somersaults and played leap-frog on the soft turf until their faces glowed with rosy health. Baby Sister toddled and tumbled, rolled and laughed in perfect glee. Altho there was a nice sand pile with its enticing pails and shovels, wagons and carts of various shapes and sizes, and many other toys in plain sight —yet this happy group seemed to wish for nothing but A PLACE TO PLAY.

Parents Failed to See the Need

Here were parents wise enough to buy a comfortable house in the country. They owned five acres of good fertile soil. The father, a skilled mechanic, commutes daily, and brings home a fat pay envelope each week. The mother has all day with that jolly family of growing children, yet neither parent seems to realize that their youngsters are fairly starving for "green grass growing all 'round."

Children of ten and twelve and even younger really enjoy the responsibility of caring for flowers, gardens, and a good lawn. Such work with the tools necessary, offers the best kind of training all thru spring, summer, and autumn. Under the mother's guidance, with an occasional evening when father, too, lends a hand, the barren, unsightly, intensely hot grounds surrounding the house, may be transformed into spots of beauty and interest where the children have A PLACE TO PLAY.

How is your yard? We are awakening to the value of sunshine for our children. Now, today, let us begin to link that golden, healthful sunshine with the cool inviting green of growing grass. Greater happiness and healthier youngsters will be our rewards.—Gertrude S. Stewart, N. J.

In Housecleaning Time

WHEN the hands feel shrunken and shriveled from being in water too long, try rubbing them with table salt. While they are still moist, but not wet, rub the salt well into the skin, covering the entire surface. Then after a few moments wipe all off with a dry cloth. This treatment is a genuine restorative both as to looks and "feelin's." Salt promotes healing, so you need not hesitate even if there are some abrasions of the skin.

Using strong cider vinegar to wash the hands after hours in soapsuds, and drying them from the vinegar over heat (not on towel) will help them greatly. Follow with a vaseline or cold cream rub.—Clarice Raymond, N. Y.

Mary, didn't I tell you to hang out the rug and clean it? Here you have been gone two whole hours. Where have you been, anyway?

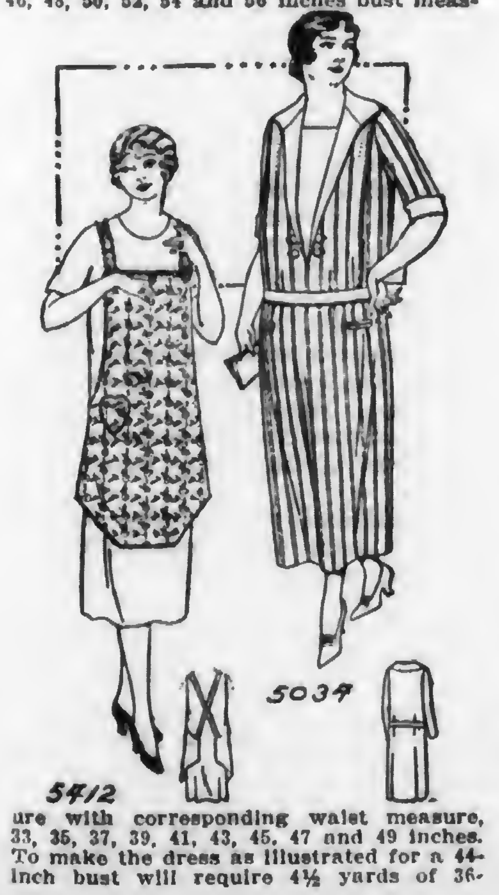
Yes, Mam, you told me to hang the rug on the line, then beat it, and I did.

Four Practical Patterns

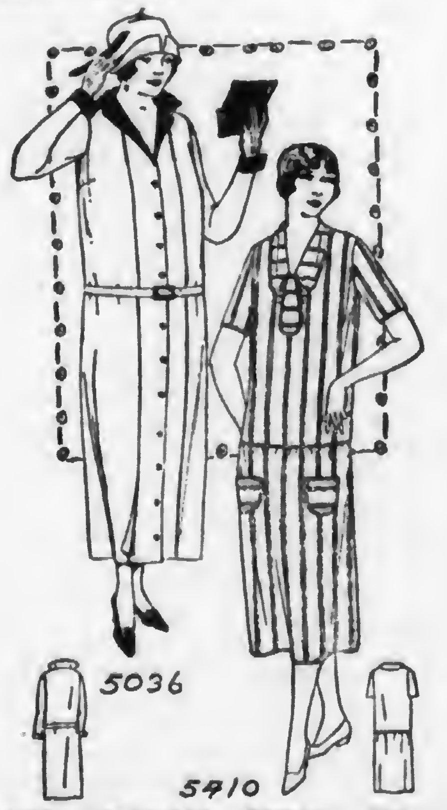
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5412.—Apron Model.—Cretonne, chintz, percale or cambric could be used for this model. One size: medium. It will require 1¼ yard of 36-inch material to make this pleasing style. Pattern, 10 cents.

5034.—A Morning Frock.—Striped gingham or linen will be good for this model, with facings of contrasting material in a plain color. The sleeve may be in wrist or elbow length. Nine sizes: 40, 42, 44, 46, 48, 50, 52, 54 and 56 inches bust measure with corresponding waist measure, 33, 35, 37, 39, 41, 43, 45, 47 and 49 inches. To make the dress as illustrated for a 44-inch bust will require 4½ yards of 36-inch striped material, and ⅞ yard of plain for facings. The width at the foot is 1¾ yard. Pattern, 10 cents.

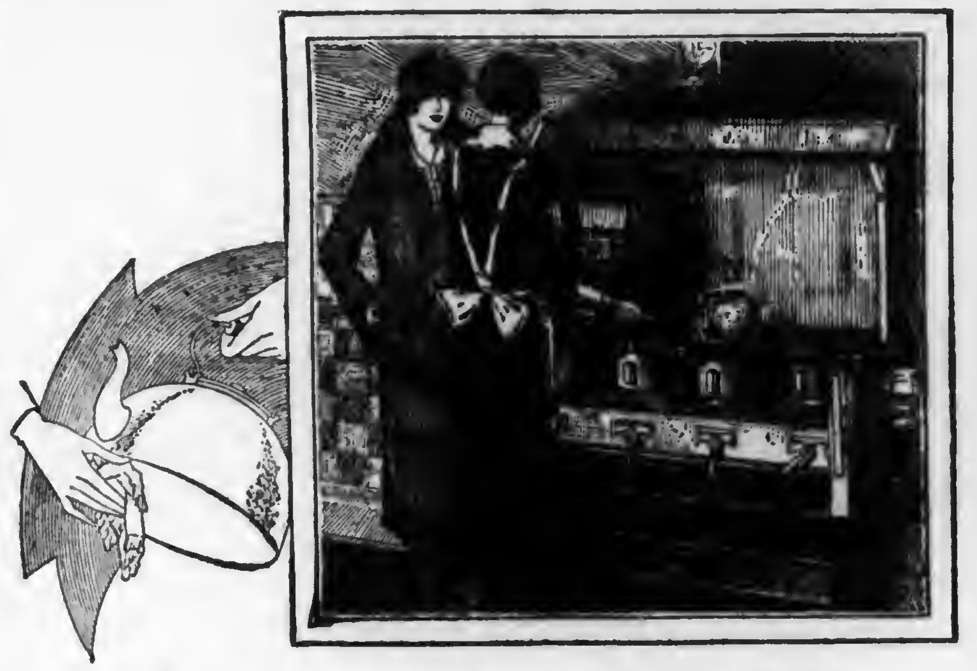


5036.—A Good Style.—Kasha, broadcloth, taffeta, or crepe could be used for this model. Nine sizes: 40, 42, 44, 46, 48, 50, 52, 54 and 56 inches bust measure. A 42-inch size will require 5½ yards of one material 40 inches wide. For facing on collar, cuffs and revers portions of the panels ⅜ yard will be required. The width of the dress at the foot is 1¾ yard. Pattern, 10 cents.



5410.—Comfortable Summer Dress.—Striped percale was used in this instance. One could use gingham or tub silk for this design. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅞ yards of 36-inch material. The width at the lower edge of the dress is 2 yards. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.



24 hours in the blue gas flame [—and not a trace of soot]

TWENTY-FOUR continuous hours, a week's average cooking over a Nesco burner leaves not a trace of soot.

The new day Nesco, the oil stove that cooks with gas, eliminates smoke, soot, smell, scrubbing and scouring!

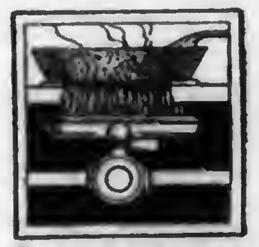
The Nesco lights like an ordinary oil stove but quickly develops an intensely hot blue gas flame that strikes and spreads under the base of the utensil with the same flood of flame as a city gas burner.

Its full flame heats red hot. Turned down it simmers nicely. There's no waste of heat and all the heat goes into the cooking and not the kitchen — a real boon to the farm housewife in hot weather.

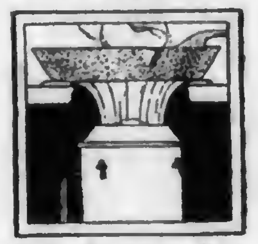
Cleanliness — intense cooking heat — cool cooking comfort— you get them all in the Nesco Oil Stove, plus harmonious beauty of design, and work and worry saving features that win your instant approval.

There's the patented Rockweave Wick that requires no trimming and cleans by burning; the simple lever-controlled burners; extra shelf room, and many other features all combined in a stove that is a million burners beyond experiment. Call on your dealer today and insist on seeing Nesco before you buy.

NATIONAL ENAMELING & STAMPING CO., INC.
Advertising Dept., 425 E. Water St., Milwaukee, Wis.
Branches at: Milwaukee, Chicago, Granite City, Ill., St. Louis, New Orleans, New York, Philadelphia, Baltimore.
Licensed Canadian Manufacturers: Dominion Stove and Foundry Company, Penetanguishene, Ontario, Canada.



The intense heat of a gas stove burner is due to the flame striking and spreading under the entire base of cooking utensils.



So also the blue-gas flame of the Nesco Burner strikes and spreads under the entire base of the utensil, producing an intense gas flame cooking heat.

Nesco's patented Rockweave Wick of wire woven asbestos. No trimming. Non-burning. Flexible. Long lasting.

1/3 of a silo of Corn for $1.50

THAT'S THE CAN THAT LOST ME MY HAPPY CORNFIELD HOME

Up in Remsen, N. Y., Webb A. Browne & Son plant about 7 acres of corn, to fill a 30x18 ft. silo. They were troubled with crows, and looked around for something that would rid them of the loss they suffered each year from crows and other pests. So they tried Stanley's Crow Repellent. And this is what they write us:—"No more trouble with crows. Would not plant corn without it. The crows never light on the field after they have tried it. Saves us from 1/3 to ½ of the crop. Stanley's Crow Repellent banishes the bugbear of replanting. And if a certain acreage will fill your silo, you don't have to plant from 1/3 to ½ more to cover the loss by crows."

Think of it! From 1/3 to ½ of your corn crop saved by expending only $1.50 for a can of

Stanley's Crow Repellent!

Further, they save the time they formerly wasted in having to plant over again. And a farmer's time at planting season is worth MONEY! Mr. Browne further says:—"It is my personal opinion that seed corn treated with Stanley's Crow Repellent showed a higher per cent germination."

Prices:
Large can, enough for 2 bu. of seed, $1.50. Half size can, $1.00. If your hardware, seed or drug store does not have it in stock, order direct from us.

Your Money Back!

We know just how Stanley's Crow Repellent will rid you of the crow nuisance. But, if you are not willing to take our word for it, or if you doubt the truth of Mr. Browne's and hundreds of other unsolicited letters we have from corn-raisers who have tried it out and know, then we are willing to back up our faith in it by as liberal guarantee as was ever made by any concern. If Stanley's Crow Repellent does not do exactly what we claim it will do, then we will gladly refund you what you paid for it. You are to be the sole judge! Could any concern be fairer than that?

An Indoor Aerial Lessens Static in Summer

INDOOR aerials are generally considered mere substitute affairs for city folks living in apartments or rented rooms where an outside wire is out of the question. Yet the inside type of aerial has its value for other listeners as well.

On the face of it, it would seem unnecessary and useless to put up an indoor aerial when one can have a good outdoor wire. Yet, in the summertime when we experience the most trouble with interference by nature's electricity, or static, the indoor aerial will allow more uninterrupted broadcast reception from the nearer and more powerful stations.

The reason for this apparently paradoxical condition is rather hard to explain. The fact is that most of us have aerials which are bigger than they need be were we interested in local stations only, or just the strong local stations. We do not turn up the controls to the highest peak of sensitiveness for nearby stations. If we did, the loud speaker would blast and music be so badly distorted that no one would want to listen to it. Hence we only partially tune our sets for the stronger stations. More accurate adjustment to the right wavelength and the use of more sensitivity would result in spoiled tonal qualities.

Had we a very small aerial we should have to be more careful about tuning—even for locals. A similar difference in the requirements for tuning in is found when we compare large and small aerials on the same set. The impulses of static which the atmosphere is crackling with in hot weather are not accurately tuned to any particular wavelength. Therefore, even if the set is somewhat out of tune the static impulses come thru quite strongly. Static is less affected by a reduced setting of the sensitivity control than is the signal.

The Value of Small Aerial

A smaller aerial picks up much less static and even tho we are then required to tune more accurately for our local stations, the outbursts of static racket at the loud speaker end are very much reduced. In the case of the broadcast waves, we are not using a large aerial than is absolutely essential for local reception when we employ an indoor aerial on the average radio set.

Since indoor aerials are apt to be handled, brush against walls, doorways, etc., it is best to use well insulated wire for the purpose. Ordinary bell wire is suitable if care is taken not to rub off the insulation. It can be tacked up to woodwork by insulated staples.

Suppose we run over briefly a few convenient types of indoor aerial. The loop aerial comes first to mind. This is commercial and compact in form, but is useful only on sensitive sets. Even then, the loop requires a change in the wiring, for the secondary winding of the radio frequency coil that is usually coupled to the aerial must be disconnected and replaced by the loop. The loop is thus simply a coil made large enough to intercept an appreciable amount of radio impulses.

A large loop (four feet square) can be employed even without any radio frequency amplifier for local reception to a considerable extent, but is generally not used on account of the difficulty of effecting suitable changes in connections.

Perhaps the very best indoor aerial for use by direct connection to the aerial binding post is a straight wire suspended in the hallway perhaps a foot down from the ceiling and a foot or more from walls. A wire of this kind thirty to forty feet long makes an admirable aerial indoors. Bends in halls can be accommodated quite easily by the use of other insulators fastened to the picture moldings at the proper spots.

Next comes the old reliable—the picture molding aerial. For this forty to sixty feet of bell wire are tucked away carefully out of sight atop the picture molding, running it along a hallway or completely encircling one's room. One end is left free and not connected to anything, while the other connects to the aerial post of the set.

Several Hook Ups Possible

One can often receive well by hooking up to one of the binding posts on the doorbell, inserting a .002 mfds. fixed condenser between the set and bell to guard against possible short-circuits. Bedsprings make useful aerials—some listeners connect up two or three of them and have very fine reception, often DX that way. Screens are usually poor, since the wires do not make good contact. Gutter-pipes have been used, altho these are often grounded and are seldom valuable in storms or wet weather.

One of the most successful ways to reduce static, altho unfortunately not one that is always workable, is to disconnect the aerial altogether. Then remove the ground wire from the ground post and put it on the aerial post. Stations can often be tuned in that way with less static than with any type of aerial.—B. F.

Hills Are a Handicap

I am wondering if I can improve my aerial. I have three different plans and can't decide which is best. First, there are hills on both sides of the house about 300 feet high and, guessing at it, nearly one-half mile apart at the top. Could a wire be drawn up from one to the other 150 feet high over the house so my aerial could run straight up? If so, what wire would you advise? Second, a pipe could be raised fifty or sixty feet at each end of the house and a fan aerial containing about 300 feet of wire could be put up. Third, a 150-foot single wire aerial could be raised between the barn and house. Which would you advise? We have a five-tube set.—W. E., Tioga County, Pa.

We are afraid that the plan of running a wire one-half mile long between the two hills on either side of your house is not practicable on account of the inability of any wire to support its own weight over such a distance. Moreover, the sag in the wire would bring the center point too low.

The fan aerial has too high a capacity and too small inductance to be ideal for broadcast reception. It represents a good deal of wire and masts that would not operate as successfully as a single wire somewhat longer.

The 150-foot single wire from house to barn is, in our opinion, much the best of the three plans. However, the length is a little too great if you wish the best of selectivity—better cut it to 125 feet and place the barn end insulator twenty-five feet from the barn. If possible, erect a mast at the house and barn to elevate the wire as much as possible. This will partially overcome the handicap you experience on account of the nearby hills.—B. F.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Corn Meal As Fertilizer

What amount of these elements of plant food is in a hundred pounds of corn meal, medium yellow? If rich enough in nitrogen or potash would it be advisable to add some to mixed fertilizer to improve the analysis one or two per cent?

One hundred pounds of corn meal will contain 1.5 pounds of nitrogen, about .5 pounds of phosphoric acid and about .4 pounds of potash. Corn meal is, of course, worth more for feed purposes than it is for fertilizer. However, lots of corn meal not fit for feeding livestock may be mixed with chemicals and used as a fertilizer.

For instance, a mixture consisting of 500 pounds of corn meal, 150 pounds each of nitrate of soda and sulphate of ammonia, 1000 pounds of acid phosphate and 200 pounds of muriate of potash would furnish three per cent of ammonia, eight per cent of phosphoric acid and five per cent of potash. The corn meal in this mixture would help to improve the mechanical condition of the fertilizer and would contribute a relatively small amount of available plant food.—J. G. Lipman.

Merits of Two Grasses

I have about eight acres that have not been plowed for nearly ten years. They are overgrown with blackberry and dewberry bushes. The soil is light, sandy loam mixed with clay. Will Sudan or billion dollar grass thrive on this soil without fertilizer? Is either good for horses if cut before it makes seed? What is the best fertilizer for corn on bottom land, on sandy loam upland, for potatoes on ordinary freestone soil?—J. H. C., Washington County, Pa.

The grasses which you mention would probably give you a fair crop without fertilizer. It would be better, however, to apply about 200 pounds per acre of a good potato fertilizer.

When cut before they fully mature and properly cured, these grasses should make good feed for horses. Experiments in the eastern states indicate that billion dollar grass is much less valuable than Sudan grass as a forage crop.

A mixture containing about three per cent of ammonia, ten to twelve per cent of phosphoric acid and three to four per cent of potash might be used to advantage for corn on the bottom land. On sandy loam upland, a somewhat higher proportion of ammonia and potash and less phosphoric acid would probably give better results. The potato mixture recommended below might also be used on the sandy loam upland for corn.

You will be entirely safe in using for potatoes a mixture containing about five per cent of ammonia, eight per cent of phosphoric acid and five per cent of potash.—J. G. Lipman.

Fertilization of "Sweets"

THE Virginia Truck Experiment Station at Norfolk is carrying on interesting investigations on the fertilization of sweet potatoes. A recent letter from the Virginia Truck Experiment Station addressed to the New Jersey Station raises some interesting questions. For the benefit of the readers of Pennsylvania Farmer the letter from the Virginia Station and the reply thereto, based on the experiences of Dr. R. F. Poole, of the New Jersey Station, are given herewith.

"For the past several years a number of our sweet potato growers in Accomac County, Virginia, have been using common salt, sodium chloride, in connection with their fertilizers for the crop,—some farmers using a fertilizer analyzing three per cent to five per cent ammonia, six per cent to eight per cent phosphoric acid, and five per cent to seven per cent of potash. This is applied at the rate of 800 to 1000 pounds per acre just before the plants are transplanted to the field.

"About two weeks after sweet potatoes are transplanted an application of common salt, varying from 750 to 1500 pounds per acre, is given as a side dressing to the plant, the claim being that the salt stimulates growth, making a large, smooth potato of high yielding qualities.

Action of Salt on Potato

"Recently the opinion has gotten abroad that the addition of salt has a tendency to produce a sweet potato that shows the effects of bruising and is susceptible to rots in transit to market. I would like to know whether you have noted anything of this kind in connection with your New Jersey sweet potato work."

Most of New Jersey sweet potato growers use a mixture corresponding in analysis to that referred to in the letter from the Virginia Station. However, the New Jersey growers seldom use more than three per cent of ammonia and many use no ammonia at all if the soil seems to be well supplied with nitrogen. The percentages of potash used vary from five to ten per cent and the applications of fertilizer from 750 to 1200 pounds per acre.

Records on the use of common salt in the growing of sweet potatoes are not available. Some years ago the station conducted some tests at Swedesboro and Pedricktown, in Gloucester County. Salt was used at the rate of 100, 200 and 300 pounds per acre. The yields published in the Journal of the American Society of Agronomy show that these applications, even at the smallest rate, caused a reduction in yield on one of the farms. A very slight increase was obtained with 100 and 200-pound applications on the other. The growers in the vicinity of Swedesboro frequently make applications of kainit at the rate of from 500 to 2000 pounds per acre. Where muriate of potash is used the applications are at the rate of 300 to 500 pounds per acre.

When to Apply

The applications of either kainit or muriate of potash are made in the fall, winter or early spring. There is no doubt where kainit is used very considerable quantities of common salt are added to the soil.

In some recent tests severe injury to sprouts occurred when kainit was used by itself or in fertilizer mixtures. There was every indication that the damage was due to common salt present in the kainit. No particular differences were noted in the color, shape and size of potatoes from plots treated or untreated with kainit. It would seem that the sweet potatoes grown on areas where kainit is used keep as well as those from areas where no kainit has been applied. Hence, there is no evidence from the New Jersey experiments that common salt has a tendency to make the sweet potato more susceptible to storage troubles.—J. G. Lipman.

ACCOUNT of old age we will sell farm of 148 acres with good lake frontage; 1½ miles southwest of City; all equipped with personal property and machinery. Good fences. Address S. C., Box 221.

Adds Value to your farm!

Your farm isn't for sale, likely, but if it should be good fences would be mighty important. Folks want good fences, just as they want good buildings. It's always the tidy, well fenced place that brings the highest figure.

Leadclad Fence is protected with a jacket of pure lead, seven times heavier than the zinc coating of ordinary fence. In that heavy jacket lies the secret of its long life.

Leadclad Fence, put up now, will add many times its cost to the value of your farm. It will look good and stay good. Years to come will see no change in its appearance or usefulness. You'll find Leadclad an investment that pays generous dividends.

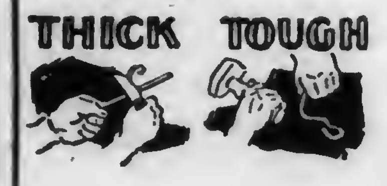
Read what McClellan Brothers say:

Leadclad Wire Company,
Please send us your catalogue and price list of Leadclad fencing and wire.
A number of years ago we bought Leadclad for use in making gutters for our barn. There was not quite enough so the job was finished with a widely advertised material of another maker which was obtainable right here in town.
About four years ago we discovered leaks in the gutters and found out that the other stuff had rusted through. The Leadclad seemed to be all right and still is, so we expect to use Leadclad for any roofing or fencing we will require.
Yours very truly,
McClellan Brothers,
Whitehall Farm,
R. D. No. 2,
Canonsburg, Pa.

Leadclad Fence is manufactured in every style for farm use, as well as for poultry and lawn and is sold direct to you at a single profit. We pay the freight.

Write today for samples, full particulars and our Special 5% Club Discount Offer.

LEADCLAD WIRE CO.,
1202 Plainfield St., Moundsville, W. Va.



Take your knife and shave a piece of LEADCLAD wire. Note how thick the pure lead jacket is. You can't scrape all the lead off, even with a sharp knife. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

RADIO DEPARTMENT

An Indoor Aerial Lessens Static in Summer

INDOOR aerials are generally considered mere substitute affairs for city folks living in apartments or rented rooms where an outside wire is out of the question. Yet the inside type of aerial has its value for other listeners as well.

On the face of it, it would seem unnecessary and useless to put up an indoor aerial when one can have a good outdoor wire. Yet, in the summertime when we experience the most trouble with interference by nature's electricity, or static, the indoor aerial will allow more uninterrupted broadcast reception from the nearer and more powerful stations.

The reason for this apparently paradoxical condition is rather hard to explain. The fact is that most of us have aerials which are bigger than they need be were we interested in local stations only, or just the strong local stations. We do not turn up the controls to the highest peak of sensitiveness for nearby stations. If we did, the loud speaker would blast and music be so badly distorted that no one would want to listen to it. Hence we only partially tune our sets for the stronger stations. More accurate adjustment to the right wavelength and the use of more sensitivity would result in spoiled tonal qualities.

Had we a very small aerial we should have to be more careful about tuning—even for locals. A similar difference in the requirements for tuning in is found when we compare large and small aerials on the same set. The impulses of static which the atmosphere is crackling with in hot weather are not accurately tuned to any particular wavelength. Therefore, even if the set is somewhat out of tune the static impulses come thru quite strongly. Static is less affected by a reduced setting of the sensitivity control than is the signal.

The Value of Small Aerial

A smaller aerial picks up much less static and even tho we are then required to tune more accurately for our local stations, the outbursts of static racket at the loud speaker end are very much reduced. In the case of the broadcast waves, we are not using a large aerial than is absolutely essential for local reception when we employ an indoor aerial on the average radio set.

Since indoor aerials are apt to be handled, brush against walls, doorways, etc., it is best to use well insulated wire for the purpose. Ordinary bell wire is suitable if care is taken not to rub off the insulation. It can be tacked up to woodwork by insulated staples.

Suppose we run over briefly a few convenient types of indoor aerial. The loop aerial comes first to mind. This is commercial and compact in form, but is useful only on sensitive sets. Even then, the loop requires a change in the wiring, for the secondary winding of the radio frequency coil that is usually coupled to the aerial must be disconnected and replaced by the loop. The loop is thus simply a coil made large enough to intercept an appreciable amount of radio impulses.

A large loop (four feet square) can be employed even without any radio frequency amplifier for local reception to a considerable extent, but is generally not used on account of the difficulty of effecting suitable changes in connections.

Perhaps the very best indoor aerial for use by direct connection to the aerial binding post is a straight wire suspended in the hallway perhaps a foot down from the ceiling and a foot or more from walls. A wire of this kind thirty to forty feet long makes an admirable aerial indoors. Bends in halls can be accommodated quite easily by the use of other insulators fastened to the picture moldings at the proper spots.

Next comes the old reliable—the picture molding aerial. For this forty to sixty feet of bell wire are tucked away carefully out of sight atop the picture molding, running it along a hallway or completely encircling one's room. One end is left free and not connected to anything, while the other connects to the aerial post of the set.

Several Hook Ups Possible

One can often receive well by hooking up to one of the binding posts on the doorbell, inserting a .002 mfds. fixed condenser between the set and bell to guard against possible short-circuits. Bedsprings make useful aerials—some listeners connect up two or three of them and have very fine reception, often DX that way. Screens are usually poor, since the wires do not make good contact. Gutter-pipes have been used, altho these are often grounded and are seldom valuable in storms or wet weather.

One of the most successful ways to reduce static, altho unfortunately not one that is always workable, is to disconnect the aerial altogether. Then remove the ground wire from the ground post and put it on the aerial post. Stations can often be tuned in that way with less static than with any type of aerial.—B. F.

Hills Are a Handicap

I am wondering if I can improve my aerial. I have three different plans and can't decide which is best. First, there are hills on both sides of the house about 300 feet high and, guessing at it, nearly one-half mile apart at the top. Could a wire be drawn up from one to the other 150 feet high over the house so my aerial could run straight up? If so, what wire would you advise? Second, a pipe could be raised fifty or sixty feet at each end of the house and a fan aerial containing about 300 feet of wire could be put up. Third, a 150-foot single wire aerial could be raised between the barn and house. Which would you advise? We have a five-tube set. —W. E., Tioga County, Pa.

We are afraid that the plan of running a wire one-half mile long between the two hills on either side of your house is not practicable on account of the inability of any wire to support its own weight over such a distance. Moreover, the sag in the wire would bring the center point too low.

The fan aerial has too high a capacity and too small inductance to be ideal for broadcast reception. It represents a good deal of wire and masts that would not operate as successfully as a single wire somewhat longer.

The 150-foot single wire from house to barn is, in our opinion, much the best of the three plans. However, the length is a little too great if you wish the best of selectivity—better cut it to 125 feet and place the barn end insulator twenty-five feet from the barn. If possible, erect a mast at the house and barn to elevate the wire as much as possible. This will partially overcome the handicap you experience on account of the nearby hills.—B. F.

INTENTIONAL SECOND EXPOSURE

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Corn Meal As Fertilizer

What amount of these elements of plant food is in a hundred pounds of corn meal, medium yellow? If rich enough in nitrogen or potash would it be advisable to add some to mixed fertilizer to improve the analysis one or two per cent?

One hundred pounds of corn meal will contain 1.5 pounds of nitrogen, about .5 pounds of phosphoric acid and about .4 pounds of potash. Corn meal is, of course, worth more for feed purposes than it is for fertilizer. However, lots of corn meal not fit for feeding livestock may be mixed with chemicals and used as a fertilizer.

For instance, a mixture consisting of 500 pounds of corn meal, 150 pounds each of nitrate of soda and sulphate of ammonia, 1000 pounds of acid phosphate and 200 pounds of muriate of potash would furnish three per cent of ammonia, eight per cent of phosphoric acid and five per cent of potash. The corn meal in this mixture would help to improve the mechanical condition of the fertilizer and would contribute a relatively small amount of available plant food.—J. G. Lipman.

Merits of Two Grasses

I have about eight acres that have not been plowed for nearly ten years. They are overgrown with blackberry and dewberry bushes. The soil is light, sandy loam mixed with clay. Will Sudan or billion dollar grass thrive on this soil without fertilizer? Is either good for horses if cut before it makes seed? What is the best fertilizer for corn on bottom land, on sandy loam upland, for potatoes on ordinary freestone soil?—J. H. C., Washington County, Pa.

The grasses which you mention would probably give you a fair crop without fertilizer. It would be better, however, to apply about 200 pounds per acre of a good potato fertilizer.

When cut before they fully mature and properly cured, these grasses should make good feed for horses. Experiments in the eastern states indicate that billion dollar grass is much less valuable than Sudan grass as a forage crop.

A mixture containing about three per cent of ammonia, ten to twelve per cent of phosphoric acid and three to four per cent of potash might be used to advantage for corn on the bottom land. On sandy loam upland, a somewhat higher proportion of ammonia and potash and less phosphoric acid would probably give better results. The potato mixture recommended below might also be used on the sandy loam upland for corn.

You will be entirely safe in using for potatoes a mixture containing about five per cent of ammonia, eight per cent of phosphoric acid and five per cent of potash.—J. G. Lipman.

Fertilization of "Sweets"

THE Virginia Truck Experiment Station at Norfolk is carrying on interesting investigations on the fertilization of sweet potatoes. A recent letter from the Virginia Truck Experiment Station addressed to the New Jersey Station raises some interesting questions. For the benefit of the readers of Pennsylvania Farmer the letter from the Virginia Station and the reply thereto, based on the experiences of Dr. R. F. Poole, of the New Jersey Station, are given herewith.

"For the past several years a number of our sweet potato growers in Accomac County, Virginia, have been using common salt, sodium chloride, in connection with their fertilizers for the crop,—some farmers using a fertilizer analyzing three per cent to five per cent ammonia, six per cent to eight per cent phosphoric acid, and five per cent to seven per cent of potash. This is applied at the rate of 800 to 1000 pounds per acre just before the plants are transplanted to the field.

"About two weeks after sweet potatoes are transplanted an application of common salt, varying from 750 to 1500 pounds per acre, is given as a side dressing to the plant, the claim being that the salt stimulates growth, making a large, smooth potato of high yielding qualities.

Action of Salt on Potato

"Recently the opinion has gotten abroad that the addition of salt has a tendency to produce a sweet potato that shows the effects of bruising and is susceptible to rots in transit to market. I would like to know whether you have noted anything of this kind in connection with your New Jersey sweet potato work."

Most of New Jersey sweet potato growers use a mixture corresponding in analysis to that referred to in the letter from the Virginia Station. However, the New Jersey growers seldom use more than three per cent of ammonia and many use no ammonia at all if the soil seems to be well supplied with nitrogen. The percentages of potash used vary from five to ten per cent and the applications of fertilizer from 750 to 1200 pounds per acre.

Records on the use of common salt in the growing of sweet potatoes are not available. Some years ago the station conducted some tests at Swedesboro and Pedricktown in Gloucester County. Salt was used at the rate of 100, 200 and 300 pounds per acre. The yields published in the Journal of the American Society of Agronomy show that these applications, even at the smallest rate, caused a reduction in yield on one of the farms. A very slight increase was obtained with 100 and 200-pound applications on the other. The growers in the vicinity of Swedesboro frequently make applications of kainit at the rate of from 500 to 2000 pounds per acre. Where muriate of potash is used the applications are at the rate of 300 to 500 pounds per acre.

When to Apply

The applications of either kainit or muriate of potash are made in the fall, winter or early spring. There is no doubt where kainit is used very considerable quantities of common salt are added to the soil.

In some recent tests severe injury to sprouts occurred when kainit was used by itself or in fertilizer mixtures. There was every indication that the damage was due to common salt present in the kainit. No particular differences were noted in the color, shape and size of potatoes from plots treated or untreated with kainit. It would seem that the sweet potatoes grown on areas where kainit is used keep as well as those from areas where no kainit has been applied. Hence, there is no evidence from the New Jersey experiments that common salt has a tendency to make the sweet potato more susceptible to storage troubles.—J. G. Lipman.

ACCOUNT of old age we will sell farm of 148 acres with good lake frontage; 17 miles southwest of City; all equipped with personal property and machinery. Good fences. Address S. C., Box 221.
THICK
TOUGH

Adds Value *to your farm!*

Your farm isn't for sale, likely, but if it should be good fences would be mighty important. Folks want good fences, just as they want good buildings. It's always the tidy, well fenced place that brings the highest figure.

Leadclad Fence is protected with a jacket of pure lead, seven times heavier than the zinc coating of ordinary fence. In that heavy jacket lies the secret of its long life.

Leadclad Fence, put up now, will add many times its cost to the value of your farm. It will look good and stay good. Years to come will see no change in its appearance or usefulness. You'll find Leadclad an investment that pays generous dividends.

Read what McClellan Brothers say:

Leadclad Wire Company.
Please send us your catalogue and price list of Leadclad fencing and wire.
A number of years ago we bought Leadclad for use in making gutters for our barn. There was not quite enough so the job was finished with a widely advertised material of another maker which was obtainable right here in town.
About four years ago we discovered leaks in the gutters and found out that the other stuff had rusted through. The Leadclad seemed to be all right and still is, so we expect to use Leadclad for any roofing or fencing we will require.
Yours very truly.
McClellan Brothers,
Whitehall Farm,
R. D. No. 2,
Canonsburg, Pa.

Leadclad Fence is manufactured in every style for farm use, as well as for poultry and lawn and is sold direct to you at a single profit. We pay the freight.

Write today for samples, full particulars and our Special 5% Club Discount Offer.

LEADCLAD WIRE CO.,
1202 Plainfield St., Moundsville, W. Va.

Take your knife and shave a piece of LEADCLAD wire. Note how thick the pure lead jacket is. You can't scrape all the lead off, even with a sharp knife. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

Toledo, Ohio, April 3, 1926.

Cloverseed, cash, domestic, $21; imported, $24.40; October, $15.65. Alsike, cash, $17. Timothyseed, cash, $3.45; September, $3.55.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, April 5. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$ 32.50
Spring bran	31.50@32.00
Soft winter wheat bran.....	34.00@34.25
Hard winter wheat bran	32.00@32.50
Standard middlings	31.00@31.50
Soft winter wheat middlings	32.50@36.50
Flour middlings	34.50@38.50
Red dog flour	39.00@40.50
White hominy	30.50@30.70
Yellow hominy	30.50
Gluten feed	37.85@38.50
36 per cent cottonseed meal..	37.75@38.25
41 per cent cottonseed meal..	39.75@40.25
43 per cent cottonseed meal..	41.25@41.75
34 per cent linseed meal....	49.75@50.20

Millfeed in small supply, with demand light.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE Easter demand for fruits and vegetables stimulated trading on many lines in Philadelphia during the week ending April 3, according to the Pennsylvania and Federal Bureau of Markets. Strawberry offerings were moderate but the demand was active and prices advanced. Lettuce, new beets and tomatoes sold readily. Spring vegetables such as dandelion greens and scallions held steady.

Potatoes furnished the sensation of the week and jumped sharply to highest levels reached so far this season. Pennsylvania round whites sold at $7.75 to $8.25 per 150-pound sack at the close of the market on Saturday. Last year on the same date similar stock sold at $1.00 to $1.65 per 150-pound sack. The excited condition of the market resulted in active buying.

Pennsylvania mushrooms held generally steady but made slight advances on Friday. Saturday's market was weaker and prices declined slightly. Carrots showed a firmer tendency while parsnips were weaker.—W. R. W.

Butter Markets

A RATHER unusual snow storm for this season of year in the Middle West, resulting in a slowing up in transportation, was the factor largely responsible for the development of a firm butter market during the week ending April 3rd. All markets opened on Monday in a rather unsatisfactory position and only a few operators could be found who expressed any amount of confidence in the situation. However, the heavy snow storm, quite general in the Middle West, which began on Tuesday and continued thruout Wednesday and was resumed again on Friday, resulted in the development of a firm sentiment.

In conjunction with the improved tone some scattered speculative buying developed and this aided by an improved demand for consumption purposes effected a slight advance in price on all markets.

NEY

Investing money to make money

YOUR cows thrive on good feed, good housing and under the influence of sanitary dairy barn equipment. They deliver more milk—and a better quality of milk.

For this reason you can count the money you put into Ney Dairy Barn Equipment a rock-ribbed investment that pays its own cost, and in addition returns you a substantial dividend in more dollars of actual profit.

Take the first step to more profits from your milk pail by sending for the Ney complete catalog No. 51. Write today.

PENNSYLVANIA FARMER
261 So. Third St., Phila., Pa.

County News and Comment

Blair County, Pa.—Apparently the backbone of the winter is broken, the ice is all melted and we have had warm weather for a while with several thunder showers last week. There was a very heavy snow fell last night and this morning. Wheat and grass are showing signs of life now. Bluebirds, robins, pewees, meadow larks and several kinds of sparrows are with us again. There has been lots of grippe and pneumonia thruout the county recently. Public sales are well attended and most articles selling well, cows and hogs are extra high. Farmers are preparing for the spring rush but practically no plowing done yet. Wheat is selling for $1.70; corn, 80c; eggs, 28@35c.—H. E. H., March 26.

Fulton County, Pa.—Weather has been unusually cold for the past month with just a few spring-like days. Grain fields look badly. Grass for hay will be very scarce. Many intended hay fields are being plowed for corn. Farmers are preparing to sow oats. Clover has nearly all been sown. Some gardens made. Not many baby chicks yet but farmers are preparing to raise more than formerly. Hens are selling as high as $2.10 at the sales. Not so many sales as some years but everything is selling for good prices. Many farmers will have to buy hay. Hogs and pigs are scarce and high in price. Market quotations: eggs, 25c; butter, 40c; veal calves, 12c; lard, 17c.—T. H. T., March 27.

Gloucester County, N. J.—Normal acreages of most truck crops are being planted in this county this spring. White potatoes will be further reduced and the shrinkage will possibly be taken up by late tomatoes. There will not be much increase in the late tomato acreage. With the exception of one large canning company the price now looks as if it will be around $16 per ton. That company is offering $22 ton. It is estimated the holdings of sweet potatoes are around 75,000 bushels. This is far in excess of the normal holdings at this time of the year. Severe competition from other sections of the country, notably Delaware and Maryland, are considered the reason for the much larger holdings. With the stocks from these two states about cleared up, there is now a much better demand for Jersey potatoes and they are now moving in a greater volume. Reports from the government show that the carlot shipments of sweet potatoes are a third heavier than last year to date.—A. K., March 26.

Salem County, N. J.—The acreage of white potatoes will again be heavily reduced, with the lightest acreage going in the ground for many years. The swing in crops will be towards late tomatoes and corn. Even with a contract price of $15 per ton they are shifting a part of their acreage. County Agent R. O. Vaughn reports a big increase in the alfalfa acreage. The demand for information about this crop is very large, and the farmers themselves are turning to alfalfa as a cash crop. The demand for plants from community beds is much greater than last year. Some of the beds are now sold at full capacity, even with the seed still unsown. Last year about one million plants were grown in the community beds and the demand this year will probably be double that of 1925. The low price of corn will not affect the planting for this year, even with the price around 75c per bushel or less.—E. M. B., March 20.

Sullivan County, Pa.—We are now in the midst of a cold snap following a week of spring. It is feared that the sudden change will injure the wheat crop which had started to green up. Farmers have hauled nearly all their winter manure on the fields. The fields have not thawed enough to permit spring plowing, as yet. A few farmers are pruning orchard trees. State and township roads, alike, are in an impassable condition. Construction companies are building a long stretch of cement from Muncy Valley to Dushore, twenty miles. Sales this spring are not nearly as common as last spring. Some prices: butter, 50c; eggs, 30c; lard, 25c; oats, 65c; buckwheat, 90c; corn, $2.25 cwt.—M. G., April 1.

York County, Pa.—The weather the last few days has been very nice, quite a contrast to the cold and windy weather of the first half of the month. Many country roads are very muddy. If the present warm weather continues for a few days longer the ground will be in condition to plow. Quite a lot of manure was hauled to the fields during March. One farmer of the county has reported potatoes planted. Wheat not in very good condition owing to late sowing and not much snow protection thru the winter. The prospect for a crop of clover hay is not good this year owing to the seed not growing last summer. Clover seed is scarce and high in price. Hopewell Township has signed up for the T. B. test on the area plan. There are now seven townships in York County signed up and it is expected that the eighth township will soon sign up for the test. Four have already been tested. Wheat, $1.55; corn, 67c; oats, 42c; rye, 95c; four per cent milk, $2.50; butter, 35@50c; eggs, 24@27c; cloverseed, 30@38c; alfalfa, 24c; hogs, $13.50@14.50, live weight; potatoes, $2.25@2.50; hay, $16@20 ton.—W. K., March 24.

Feed Market Situation

THE demand for feed was not materially improved during the week ending April 1 altho the market for most feeds has become slightly firmer as a result of the light offerings for immediate shipment.

Wheat millfeeds are being held fairly firm by the light mill offerings. Spring wheat mills are reported behind on their contracts for immediate shipment and winter wheat mills also are not offering feed freely. Offerings from jobbers and resellers, however, have been sufficient to prevent any advance in price and mill offerings for April and May shipment are quoted at about $1 below spot sales.

The linseed meal market has also become slightly firmer because of the small production and light offerings by the crushers. Demand, however, is not urgent and meal for April shipment is being offered at $1 per ton over meal for prompt shipment.

Cottonseed Meal Firmer

The cottonseed meal market has also become firmer as a result of a better export demand and a more active demand from feeders, particularly in the Northwest. Offers of meal for later shipment are becoming smaller and prices for shipment during May and June have been advanced to 50c and $1 above spot prices.

Gluten feed prices are unchanged and the recent cold weather and snow in the West is holding the demand steady. Production, however, continues large and the supply seems adequate for current demand. The demand for hominy feed has also shown considerable improvement and prices have advanced $1@1.50 per ton.

A fair inquiry has developed for alfalfa meal, especially the choice grades, but the lower grades continue rather dull.—United States Bureau of Agricultural Economics.

Tobacco Letter

THE possibilities of selling the remainder of the 1925 crop dwindle steadily with the approach of spring. Buying has been very slack. One firm has bought up a lot of low grade tobacco for the manufacture of scrap, at prices from six to eight cents a pound thru. Many growers prefer to market their crop on a "thru" basis, since no sizing or sorting is necessary.

Shipments of low grades for export continue, and this type of tobacco will doubtless be exhausted in a short time. The large purchases for export purposes will undoubtedly help the general tone of the Pennsylvania tobacco market. It is serving to reduce the stock of tobacco on hand, and is taking a large quantity of cheap tobacco off the market, thus eliminating competition between this and the better grades.

Growers who have sold want to get their tobacco off the farm, for seed bed time is nearly here. Reports from the farm bureau indicate that a large number of growers are availing themselves of the free seed cleaning service offered by the bureau. Altho not as much seed is being handled as was the case in previous years, indications are thus far that the cut in acreage will not be as severe as has been expected.

Plans are being made by County Agent F. S. Bucher, Otto Olson, of the state-federal experimental force, and the state and national Departments to put on an extensive program of investigation in tobacco culture during the coming season. All agencies will cooperate.—Lancaster, Pa., April 1.

TREE STRAWBERRY

PLANT A FEW IN YOUR GARDEN

The Tree Strawberry is the largest and most beautiful of all berries. It is a new plant, both in habit of growth and form of fruit. The root is a perennial, throwing up numerous strong branching shoots about two feet high, with foliage that is ornamental and blossoms that are beautiful. It bears fruit continually all summer and fall, and the mammoth ruby-red berries, large white blossoms and glossy ornamental foliage make it a plant that is handsome to look upon. Not only are the berries beautiful and monstrous in size, but for jelly, canning and preserves they have few equals. The canes or shoots die to the earth in winter; new ones being thrown up the following spring, which begin blooming and setting fruit at once. The plant is hardy in any location or climate. No amount of cold or heat will injure it. A few of these bushes would make a most desirable addition to your garden. Plants will bear the first season and get stronger and larger each year.

We are giving away six of these strawberry plants for the purpose of introducing POULTRY KEEPER into new homes. POULTRY KEEPER is devoted to practical poultry raising. It tells how to make money from poultry. It is chock full of interesting matter concerning poultry raising.

Send $1.00 for two years' subscription to POULTRY KEEPER and we will send you six of these tree strawberry plants free of charge. Address

Box 94 Quincy, Ill.

Get busy with your SPRINKLING CAN

SPRING is the time to clean up and disinfect.

Time to get busy with the sprinkling can charged with a solution of Dr. Hess Dip and Disinfectant.

Sprinkle it in the poultry-house—in the nests, roosts, floors. Spray it in the cracks and crevices to kill the mites.

Sprinkle it in the cow barns, in the pig-pens, sinks, drains and closets—wherever there is filth or a foul odor. It kills the disease germs, keeps everything, everywhere, healthful and clean-smelling.

The Care of Bees in the Spring

First Examine All Colonies for Disease

THE amount of work to be done with bees in the spring mostly depends upon the kind of care given them during the previous summer and fall. It is no more necessary to lose bees in winter than it is to lose cows or horses in winter and yet large numbers of colonies die or are so weak that they are practically useless in the spring. Unfortunately few colonies on the farm are ever given proper fall attention.

The ideal colony, from about April first to the time of the first surplus honey flow, usually clover, is one that has a vigorous queen not over one year old, is in an adequately insulated hive, has about three or four pounds of bees, in a two-story hive with the upper brood chamber not less than two-thirds full of honey and the lower brood chamber full of good all worker combs for brood rearing. Bees so arranged the previous fall need no spring care except one or two examinations in April and May to determine whether any brood disease may be present and to see that the queen is doing as well as expected. In such a colony nature will care for the proper building of the colony to full strength by the time the first surplus honey flow arrives.

Help Them Harvest Good Crop

In the spring it is too late to retrieve a badly wintered colony but much can be done to help them harvest a honey crop that will pay the beekeeper for his trouble. As soon as the weather is warm enough so that bees can be handled with ease, examine all colonies. Hives in which the bees have died should be cleaned of dead bees and refuse matter and removed from the apiary into the shop. The combs should be examined for evidences of American foul brood. If free from this disease all good combs may be saved to give additional room to strong colonies later in the spring or, if containing honey, used to feed colonies that are short of food.

Diseased combs or combs damaged by mice or having a large proportion of drone cells should be melted into beeswax. The wax from these defective combs will pay for full sheets of foundation to build perfect combs to replace the poor ones. It is bad practice to allow dead colonies to stand in the apiary to be robbed. Robbing is a bad habit and may cause the spread of bee diseases. —Geo. H. Rea.

When Wages Change

(Continued from page 3)

producers. Then, there will be an outcry in the cities against the "high cost of living" and another "back to the land movement."

A survey of the farm population made by the United States Department of Agriculture indicates that there were 109,000 fewer hired laborers on farms on January 1, 1925, than a year previous. This was a decrease of 3.4 per cent in one year, the total number being 3,085,000 against 3,194,000 on January 1, 1924. The total movement from cities to farms was about 1,396,000 in 1924 against 2,075,000 going from farms to cities. Hired farm laborers made up about twenty-five per cent of the totals each way, the balance consisting of persons from the families of farm tenants and farm owners.

Back in 1920, when agriculture was prosperous, the movement from cities to farms was about the same as the reverse movement, so that there was a gain in the farm population approximately equal to the excess of births over deaths.

Only Temporary Influence

A period of business depression in the cities would cause many laborers to return to the farm because of inability to find work and the high cost of urban living. When depression occurs, it can best be regarded as temporary influence.

Broadly speaking, the solution of the farm labor problem must be found thru the use of more and larger machinery, a better layout of the farm, larger fields, and more careful planning of all farm work. Headwork and machine work must be made to substitute for handwork.

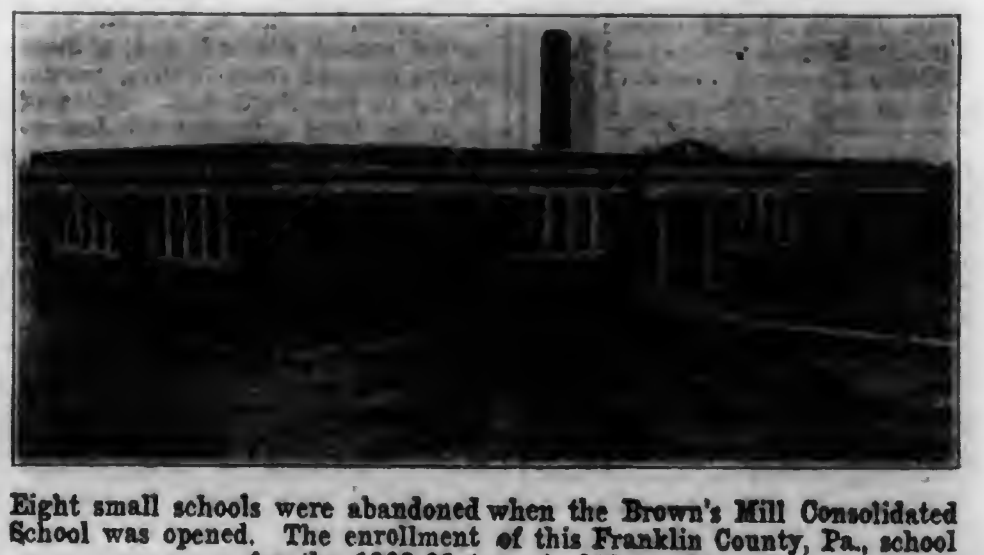
Good Roads—Better Schools

(Continued from page 3)

there thru the normal months of school by motor.

Summer school is a mighty poor, makeshift solution. To my mind it is a spineless compromise with the Highway Department. A district that goes deep into its pocket to finance a consolidated school is justified in demanding roads passable at all times. What we need is a program of more good roads, even if that means fewer boulevards. It is more important that a school truck can make fifteen miles an hour in February and April, than that a great touring car can make fifty in June and November. If schools today mean consolidation instead of a "ragged beggar sunning," traffic means automobiles not ox-carts.

I am fond of candles and antiques, but I am a modern and glad for this message from the office of the Director; "The higher type of school is increasing rapidly. We now have about four hundred and fifty consolidated schools; have started about thirty-five new ones this year and are approving many projects for the near future. It is most encouraging."



Eight small schools were abandoned when the Brown's Mill Consolidated School was opened. The enrollment of this Franklin County, Pa., school for the 1925-26 term is 342 pupils.

LAWRENCE P. UHL
THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO.
I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct, from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:
For quick action order from this advertisement in perfect safety. Reference: Duns or Bradstreet, Farmers State Bank. Free Catalog. If it is QUALITY you want try our Chicks this season before it is too late. Let us know your exact wants if you do not find it in this price list. I want your business and you may rest assured that I will take care of you RIGHT.

The Care of Bees in the Spring

First Examine All Colonies for Disease

THE amount of work to be done with bees in the spring mostly depends upon the kind of care given them during the previous summer and fall. It is no more necessary to lose bees in winter than it is to lose cows or horses in winter and yet large numbers of colonies die or are so weak that they are practically useless in the spring. Unfortunately few colonies on the farm are ever given proper fall attention.

The ideal colony, from about April first to the time of the first surplus honey flow, usually clover, is one that has a vigorous queen not over one year old, is in an adequately insulated hive, has about three or four pounds of bees, in a two-story hive with the upper brood chamber not less than two-thirds full of honey and the lower brood chamber full of good all worker combs for brood rearing. Bees so arranged the previous fall need no spring care except one or two examinations in April and May to determine whether any brood disease may be present and to see that the queen is doing as well as expected. In such a colony nature will care for the proper building of the colony to full strength by the time the first surplus honey flow arrives.

Help Them Harvest Good Crop

In the spring it is too late to retrieve a badly wintered colony but much can be done to help them harvest a honey crop that will pay the beekeeper for his trouble. As soon as the weather is warm enough so that bees can be handled with ease, examine all colonies. Hives in which the bees have died should be cleaned of dead bees and refuse matter and removed from the apiary into the shop. The combs should be examined for evidences of American foul brood. If free from this disease all good combs may be saved to give additional room to strong colonies later in the spring or, if containing honey, used to feed colonies that are short of food.

Diseased combs or combs damaged by mice or having a large proportion of drone cells should be melted into beeswax. The wax from these defective combs will pay for full sheets of foundation to build perfect combs to replace the poor ones. It is bad practice to allow dead colonies to stand in the apiary to be robbed. Robbing is a bad habit and may cause the spread of bee diseases. —Geo. H. Rea.

When Wages Change

(Continued from page 3)

producers. Then, there will be an outcry in the cities against the "high cost of living" and another "back to the land movement."

A survey of the farm population made by the United States Department of Agriculture indicates that there were 109,000 fewer hired laborers on farms on January 1, 1925, than a year previous. This was a decrease of 3.4 per cent in one year, the total number being 3,085,000 against 3,194,000 on January 1, 1924. The total movement from cities to farms was about 1,396,000 in 1924 against 2,075,000 going from farms to cities. Hired farm laborers made up about twenty-five per cent of the totals each way, the balance consisting of persons from the families of farm tenants and farm owners.

Back in 1920, when agriculture was prosperous, the movement from cities to farms was about the same as the reverse movement, so that there was a gain in the farm population approximately equal to the excess of births over deaths.

Only Temporary Influence

A period of business depression in the cities would cause many laborers to return to the farm because of inability to find work and the high cost of urban living. When depression occurs, it can best be regarded as temporary influence.

Broadly speaking, the solution of the farm labor problem must be found thru the use of more and larger machinery, a better layout of the farm, larger fields, and more careful planning of all farm work. Headwork and machine work must be made to substitute for handwork.

Good Roads—Better Schools

(Continued from page 3)

there thru the normal months of school by motor.

Summer school is a mighty poor, makeshift solution. To my mind it is a spineless compromise with the Highway Department. A district that goes deep into its pocket to finance a consolidated school is justified in demanding roads passable at all times. What we need is a program of more good roads, even if that means fewer boulevards. It is more important that a school truck can make fifteen miles an hour in February and April, than that a great touring car can make fifty in June and November. If schools today mean consolidation instead of a "ragged beggar sunning," traffic means automobiles not ox-carts.

I am fond of candles and antiques, but I am a modern and glad for this message from the office of the Director; "The higher type of school is increasing rapidly. We now have about four hundred and fifty consolidated schools; have started about thirty-five new ones this year and are approving many projects for the near future. It is most encouraging."

Eight small schools were abandoned when the Brown's Mill Consolidated School was opened. The enrollment of this Franklin County, Pa., school for the 1925-26 term is 342 pupils.

LAWRENCE P. UHL
THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO.
I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct, from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:
For quick action order from this advertisement in perfect safety. Reference: Duns or Bradstreet, Farmers State Bank. Free Catalog. If it is QUALITY you want try our Chicks this season before it is too late. Let us know your exact wants if you do not find it in this price list. I want your business and you may rest assured that I will take care of you RIGHT.

INTENTIONAL SECOND EXPOSURE

R4273
Hog Raiser's and Farmer's Knife. Three blades—a large clip blade for general work, a sheepfoot or tobacco blade, and a correctly shaped surgical blade for altering, etc. Stag handle. Nickel silver linings, bolsters, and shield. Length, closed, 3⅝ inches. Price $2.50.

Fine Steel in Farmers' Knives

ONLY the finest steel, finely and evenly tempered, goes into Remington blades. They will hold a keen edge longer, and will take a keen edge quickly.

Remington knives are designed especially for cattlemen, stockmen, farmers, ranchers, sheep and hog raisers. In each of these knives there are sturdy blades for general use and a fine surgical blade correctly designed to make clean, quick-healing cuts in altering, docking, marking, dewlapping, or other veterinary surgery. The linings, bolsters, and shields are of nickel silver which will not rust or corrode and cause blood poisoning.

Two popular patterns are illustrated. At your dealer's you will find many other styles, with different blade combinations and handles, at prices to suit every pocketbook.

R4113
Cattleman's and Ranchman's Knife. Three blades—a large clip blade for hard use, a sheepfoot or tobacco blade, and a correctly shaped surgical blade for altering, etc. Stag handle. Nickel silver linings, bolsters and shield. Length, closed, 3⅞ inches. Price $2.50.

Feeding Ewes Beans

I have been very much interested in your articles on sheep, especially have received help from the one on feeding breeding ewes in winter. Will you please write me concerning feeding of beans to ewes about to lamb and those with young lambs. If it is advisable to feed at that time and in what quantity?—G. D., Tioga County, Pa.

You do not state the kind of beans you have available, but I presume they are cull beans. Beans are high in protein and make an excellent feed for sheep, but are generally regarded as too expensive to use as feed for livestock.

The beans can be used to advantage and will be relished by sheep when combined with corn, oats and bran. I would suggest a combination of forty parts corn, thirty parts oats, fifteen parts bran and fifteen parts of beans. If the beans can be crushed or cracked it will be desirable to do so.

This combination when supplemented with good legume hay produces a liberal flow of milk. The combination can be fed just before lambing time and after lambing. The grain should be fed sparingly before lambing and increased gradually as soon as the lambs will take all the milk produced.—W. H. Tomhave.

Price of Cattle Lower

EARLY in the winter an ordinance was passed in Chicago prohibiting the sale of milk in the city that comes from a herd of cattle that has not been tested for tuberculosis. This new regulation went into effect April 1st. When this ordinance was first proposed it brought a storm of protest from a number of farmers residing in dairy centers in northern Illinois whose supply of milk reached the Chicago market.

The argument presented was that it would mean financial ruin to many of these farmers because of the large number of cows that would be lost because they would react to the test. It was also argued that the price of milk would go up and thus would also work a hardship on the people who purchased milk in Chicago.

Price Wouldn't Increase

Milk distributors in the city favored the new ordinance and assured the city authorities that there would be no occasion for an increase in the price of milk because some of the milk distributors were at that time handling milk that came from herds that had been tested for tuberculosis and that other clean areas in Illinois and southern Wisconsin could be induced to ship milk to Chicago if the farmers supplying milk refused to test their herds. The commissioner of health refused to be influenced by the arguments presented against the new regulation. He claimed that all consumers of milk were entitled to a disease-free product and that the health of the children in Chicago was far more important than any financial loss that might be incurred by farmers whose cows were condemned when the test was applied.

As soon as it was fully understood that milk from herds that had not been tested would be barred from the city after April 1, wholesale listing was begun. The results of the tests show that an appalling number of cattle have reacted. In some cases more than half the cows in the herd have failed to pass the test. Up to about the middle of March approximately 1440 herds had been tested in twelve counties in northern Illinois, representing a total of 31,012 head of cattle. Out of the total number tested approximately 14,000 head reacted.

Many of the farmers who opposed the testing of their cows now realize the seriousness of the situation and are glad to clean up their herds. They realize that it will be a safeguard to the health of their own families and the thousands of children in the city of Chicago. While it may mean a financial loss for the present, this loss can not be compared to the benefit to be derived by a consuming public.

Places Greater Number on Market

During the past few weeks hundreds of dairy cows have been shipped to the packing centers in Chicago where these cattle are slaughtered under federal supervision. Many of the carcasses are condemned, but large numbers are also passed for food because the disease is in its early stages. The presence of these cows on the market has had a tendency to lower the prices of cattle. While these cows can not be used to fill the demand for well finished cattle, indirectly, they do influence the price of the better grades because of the volume of cattle on the market.

If all the milk consuming centers would pass and rigidly enforce an ordinance of the character of this one passed in Chicago, it would be of everlasting benefit to the dairy industry.—W. H. Tomhave.

"You seem to have had a serious accident."

"Yes," said the bandaged person. "I tried to climb a tree in my motor car."

"What did you do that for?"

"Just to oblige a lady who was driving another car. She wanted to use the road."—De Laval Monthly.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUG. 24, 1912.

Of PENNSYLVANIA FARMER, published weekly at Philadelphia, Pa., April 1, 1926.

County of Philadelphia,
State of Pennsylvania, ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Neff Laing, who, having been duly sworn according to law, deposes and says that he is the Business Manager of PENNSYLVANIA FARMER, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, The Lawrence Publishing Company, Philadelphia, Pa.

Editor, B. P. Kester..................Newtown, Pa.
Managing Editor, B. P. Kester..........Newtown, Pa.
Business Manager, Neff Laing.....Philadelphia, Pa.

2. That the owners are: (Give names and addresses of individual owners or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

The Lawrence Publishing Company...Cleveland, Ohio
Arthur Capper ....Topeka, Kas.
Paul T. Lawrence ....Cleveland, Ohio
Mrs. C. R. Rogers ....Cleveland, O.
Lillian Cotton ....Cleveland, Ohio
Kate E. Munsell ....Detroit, Mich.
F. H. Nance ....Lakewood, O.
Neff Laing ....Philadelphia, Pa.
I. R. Waterbury ....Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) The American Life Ins. Co., Detroit, Mich.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stock holders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

Neff Laing, Business Manager.

Sworn to and subscribed before me this 25th day of March, 1926.

William A. Casner, Notary Public.
(My commission expires March 8th, 1927).

CERTIFIED SEED POTATOES—High yielding strains. Send for little folder and prices. H. L. Hodnett & Sons, Fillmore, N. Y.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

NODULAR DISEASE.—About a month ago I lost a very nice sheep coming two years old. The other day another died. They both seemed weak in the legs, couldn't stand up, and lost their appetite. The first one we did not open; this one we did. She was to have lambs soon and we found them O. K., but when her small intestines came out we noticed a tremendous lot of lumps as big as a pea, some smaller, some larger, every small intestine was covered with them. When we opened the lumps they were a greenish color and seemed just on the order of real fine sand. We examined all other parts including her head and found them O. K. As far as we could tell this sheep was fat and in good condition.—E. L. B., Coraopolis, Pa. The condition of the intestines indicates that your sheep have nodular disease. There is no satisfactory treatment. These sheep should be treated for intestinal worms in the usual manner. The preventive measures are the important points to keep in mind. Pasture rotation, clean quarters and prompt removal of litter will lessen infestation so that little damage will be done by the parasite.

INFECTED QUARTER.—Please tell me what causes my cow to go off in the udder. One quarter will swell and get hard and give ropy milk. Cow gets stiff and will not eat for several feeds, then will come back all right but will have quarter weak. My feed is two parts corn and oats, two parts bran, 1 part cottonseed meal. Please give me the cause and cure for this.—S. A. K., Bedford, Pa. This cow probably has an infected quarter. The quarter should be milked frequently, four or five times daily and sufficient care exercised to prevent the infection spreading to other cows in the herd. You might try one ounce of formaldehyde in a pint of milk as a drench. The diet may well be supplemented with oil meal and roots or the use of raw linseed oil to insure prompt elimination from the digestive tract.

TEAT TROUBLE.—About two weeks ago one of my cows showed a contraction of the orifice of one of her teats and channel or duct up thru the teat became hardened. In about two days it was impossible to draw the milk by hand. Have since been using milking tube, sterilizing the teat and tube, and after milking an application of diluted iodine followed with a rub of wool-fat ointment. This treatment does not seem to be bringing any improvement, neither does it seem to be getting worse.—G. B. F., Lewisburg, Pa. It will probably be necessary to have this teat canal opened and I would advise that you get in touch with your veterinarian before the canal is entirely closed.

HEIFER HAS DISCHARGE.—I have a heifer seven months old which at times has a slight sticky discharge but is in the best of health. Her mother lost first calf at five months but carried this one full time. Have never had any abortion in my herd to my knowledge. What I wish to know is will this heifer be a safe breeder. Am told the discharge indicates abortion.—H. M., Volant, Pa. The discharge you describe may be only a normal mucus discharge. If colored with blood or streaked with pus, it would be wise to have an examination made to determine the cause of the discharge. The treatment would depend upon the cause.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Choose your POWER for the MAYTAG

GASOLINE or ELECTRICITY

Any farm home with or without electricity can own and use the world's fastest-selling washer—the MAYTAG.

The MAYTAG is the only washer with the in-built gasoline Maytag Multi-Motor as pictured here. This sturdy, reliable little gasoline engine starts with a turn of the foot lever and does a big washing with a few cents worth of gasoline.

For homes with electricity the MAYTAG is equipped with a standard electric motor.

No longer need any farm wife deny herself the convenience of the MAYTAG Washer with the cast-aluminum tub, that cleans itself, drains itself, and holds the heat longer than others—the tub shaped to give water action, in every inch of its space, *all* of the time.

No longer need any farm wife forego the time-saving advantage of the MAYTAG GYRAFOAM principle, that washes twice as fast as other washers—washes cuffs, collars, wristbands, even greasy overalls, perfectly clean, ***without hand-rubbing***—and that washes the dainty things carefully as by hand.

9 Outstanding Maytag Features

1 Washes faster.
2 Washes cleaner.
3 Largest hourly capacity. Tub holds 21 gallons.
4 Most compact washer made—takes floor space only 25 inches square.
5 Cast aluminum tub—can't warp, rot, swell, split nor corrode—cleans itself.
6 Easily adjusted to *your* height.
7 Clothes can be put in or taken out with the washer running.
8 All metal wringer. Self adjusting. Instant tension-release.
9 Electric motor for wired homes—Gasoline motor where no electricity is available.

9 Reasons for World Leadership

Deferred Payments You'll Never Miss

Free Trial For a whole Week's Wash

Read the nine MAYTAG features listed here. Then, without cost or obligation, have the nearest MAYTAG dealer loan you a MAYTAG for your next washing. Prove all the nine features by washing with it under your own home conditions. Prove for yourself that it washes faster, cleaner; that the all-metal, automatic tension wringer, the adjustable legs, the hinged lid and the satin-smooth, self-cleaning, lifetime cast-aluminum tub, are the handiest features you ever saw. Call the nearest MAYTAG dealer today.

ESTABLISHED 1880

PUBLISHED WEEKLY

Vol. 93—No. 16 PHILADELPHIA, PA., SATURDAY, APRIL 17, 1926 $1.00 a year

How a sailor turned poultryman and made a success of it—Page 3.
The science and art of controlling insect pests—Page 8.

Does Not Crack or "Chalk"

SWP house paint lasts longest and covers most surface. Holds its high gloss and its colors are fast. Recommended on the Farm Painting Guide.

Not Affected by Moisture

Varnish your door with Rexpar. Withstands exposure to rain, sleet, snow, extreme cold or hot sun. Recommended on the Farm Painting Guide.

Looks New. Holds its Looks

SW Auto Enamel dries hard with a beautiful lustre. Flows on easily. Broad range of popular, fast colors. Recommended on the Farm Painting Guide.

Think of your paint

like a ten-acre field

YOU know many a ten-acre field which you would rather own than others of the same size. Why? Character of the land.

There is no substitute for quality in land or in paint. Follow the Farm Painting Guide and use finishes which last longest and which require the least quantity because they cover the most surface. Look for the store displaying the "Guide" and the sign "Paint Headquarters."

Why not write, today, for a free copy of our beautiful and practical new Farm Painting Book?

Horse Prices Trend Upward

Some Reasons for the Recent Market Depression

NUMEROUS predictions have been made ever since 1920 that horse prices were at the bottom of the cycle and that a prolonged rise of ten or twelve years was about to start. Evidence that the upward trend has set in has become fairly convincing in the past year.

The price paid to farmers for horses, as reported by dealers each month, averaged $78 in 1925, compared with $76 in 1924. The average value per head of all horses on farms on January 1, 1926, was estimated by the United States Department of Agriculture at $65.08, compared with $64.18 one year earlier. The extent of these changes is small, but the fact that this is the first time since 1917 and 1918 that these prices failed to show a loss is significant.

Purchasing Power Higher

The purchasing power of horse values is four per cent higher than a year ago. This means that the average price of horses per head will buy a slightly larger quantity of general commodities, at wholesale prices, than it would buy last year. The purchasing power of horse values rallied once before in 1921 and 1922, then dropped to a new low level. A year ago, it was the lowest it has been as far back as 1867 where the record stops. The advance this year may be construed as another temporary rise, but the fact that the 1925 level was not much under 1920, the previous low point, is a strong hint that a final "bottom" has been established.

In addition to these signs of betterment, prices of horses at central markets have advanced. Good drafters are quoted at $175 to $300 at Chicago against $160 to $250 two years ago. Good light drafters or chunks, weighing 1600 to 1700 pounds, sell at $150 to $225, against $125 to $200 at this time in 1924. Wagon horses and farm chunks also show gains in price ranging up to $25 per head. Buyers are discriminating, however, so that prices of plain horses of all kinds have improved very little.

The accompanying chart shows the average value of horses and mules per head on January 1 of each year since 1867. Horse values have held within a narrow range for the last five years. The same behavior occurred during previous depression periods. In the late "nineties," prices hung around the low point for five years, while the preceding bottom lasted for seven years, from 1876 to 1882.

In view of this tendency, there was no reason to expect an immediate advance when horse prices dropped to the low level of 1922. It was tolerably certain that they would stay in that vicinity for several years, or decline still farther. Once started upward from these low points, however, the advance in each case has continued without interruption for several years.

Besides the tendency of horse prices to move in big cycles, the recent depression has been aggravated by the general depression in agriculture and by the growing use of automotive power on farms and in cities.

No exact record of the number of automobiles on farms at present is available, but probably two-thirds of the farms are so equipped. The 1925 farm census for the thirty states reported upon thus far shows more than twice as many tractors as in 1920, the number being 296,881 compared with 146,178 five years before. Also, 8.7 per cent of the farms in these states report tractors, or one farm out of twelve compared with one farm out of twenty-four in 1920. Presumably, the number of trucks has shown a like increase. Such records as are available indicate a further decrease in the number of horses in use on city streets.

There is no way to determine the number of horses which these mechanical power units now in use on farms would displace, but the automobile has eliminated the need for several million horses kept by farmers primarily for driving purposes. Unfortunately, no census has ever shown the number of the different kinds of horses in use. Tractors and trucks are numerous enough to take away the jobs of over a million farm work horses.

Mechanical Power a Big Influence

Obviously, this constant displacement of horses by mechanical power, on the farms as well as in the cities, has tended to prolong the period of low prices for horses and has prevented the reduction in the horse population in recent years from having as much effect on prices as it would have had otherwise. Furthermore, it is logical to expect that it will prevent as large a rise in horse prices in the coming prosperity phase of the cycle as would occur if this influence were absent.

However, there is ample ground for belief that the rise in horse prices which appeared last year will persist. The total number of horses on farms on January 1, 1926, was estimated at 15,778,000 head, a decrease of 776,000 head in the preceding year and a reduction of 4,070,000 head, or 20.5 per cent compared with 1920.

The number of horses under two years of age is only about 1,200,000 compared with 2,532,000 in 1920.

This Sailor Studied Poultry Raising

After Years of Roaming He Settled Down on a Dauphin County Chicken Farm

By W. R. WHITACRE

LIFE on a torpedo destroyer in Uncle Sam's navy and the daily routine of a poultry farm have little in common. Recruiting slogans read, "Join the Navy and Learn a Trade," but who ever saw one that read, "Join the Navy and Become a Poultryman"?

P. D. Zimmerman, owner of Whiteacres, a model poultry farm about twelve miles north of Harrisburg, joined the navy and became a poultryman, later. White Leghorns are now his specialty, instead of steamship engines.

Mr. Zimmerman, or "P. D.," as he is usually called, says, "I got the idea of starting with chickens in 1903 while in the navy. I made the acquaintance of an officer who encouraged me to read poultry magazines and bulletins. He agreed to stake me to a chicken farm upon the expiration of my enlistment and was to join me when he retired from active service."

The best laid plans oft' go awry. The officer died but P. D. did not lose interest in poultry. In 1905 he was one of a party stationed at Porto Celie, Spain, to make photographic studies of the eclipse. Members of the party were astronomers, scientists and naval men. Observation stations were also erected in North Africa in the path of totality.

"I got to see considerable of the Eastern Hemisphere during this time. Then I left the navy and became staff photographer for the Cleveland Leader News and also roamed pretty well over the country selling photographic supplies."

About this time he was married and just then the World War broke out and he became a chief engineer in the merchant service. Internal combustion engines and poultry were his hobbies and his knowledge of the former proved useful in this case. At the close of the war, altho he was offered many inducements to remain in the service, he decided that the time had come to settle down and raise chickens.

The Zimmermans settled on a little rented farm on the side of a mountain that separates Cumberland County from Perry. It was so steep that during real bad weather feed had to be carried up the slope, as trucks could not make the grade. It was uphill work in more ways than one.

Part of the poultry plant at Whiteacres, Dauphin County, Pa.

Then he bought an ideal site along the William Penn Highway and today his farm "Whiteacres," is one to be proud of. It is modern in every respect and has the added advantage of being one of the most beautiful spots in Dauphin County. It stands on a hill overlooking the Susquehanna River and the hills of Perry County on the other side.

Home Equipped with Modern Conveniences

The home is comfortable, with electric lights, running water, a furnace and a radio. P. D. listens to the radio market reports and uses them as a guide in selling his products and in buying his feeds. In addition it furnishes entertainment during the long evenings.

The farm consists of about fourteen acres and the birds have free range of the place. The largest laying house faces south and is 180 feet by twenty feet and is divided in eight pens twenty by twenty. In the middle is a feed room of the same size which enables him to store considerable grain and thus gain the advantage of buying in large lots.

Mr. Zimmerman feeds a ready mixed mash for both chicks and laying hens. He says, "It is not that I do not approve of the Pennsylvania and Cornell mashes, but because I have found it very hard to get uniform ingredients. If I grew my own grain, or could be sure of getting high grade grains, I might mix."

P. D. has tried both ways and claims that he gets better results with the commercial mash and that, altho the first cost is higher, it has paid him. Another factor that enters is that he has no help and is doing all the work himself. Any man who has tried to mix by hand sufficient feed for 1500 birds, besides tend to incubators and brooders, knows what he means.

"I prefer a good reliable starting feed for chicks over any home mixes, but I want one with alfalfa meal in it. This gives them a green food in February and March when you are often too busy to gather or make green foods. Sometimes the weather is so bad that it is impossible to get the chicks on the ground. Then alfalfa meal is just the thing for it helps prevent leg weakness."

The brooder houses have just been constructed and are of the latest type with double-lined floors and insulation. P. D. believes that they will save the extra cost over the ordinary type in one season in fuel economy and the health of the chicks. He has been very successful in rearing strong healthy birds and some of the points that he stresses are as follows:

"I put the newly-hatched chicks in chick shipping boxes for a day without any food. The divisions in the boxes prevent crowding and it gives them a chance to absorb the food Nature has provided; namely, the yolk. They are free from draft and they are less likely

Livestock at the Sesqui-Centennial

Arrangements Are Being Made for the Greatest Stock Show Ever Held in the East

By W. H. TOMHAVE

Staff Contributor and Adviser

PLANS are now being made for the livestock show at the Sesqui-Centennial Exposition in Philadelphia during the week of September 12 to 19th. The date selected is the week preceding the Eastern States Exposition at Springfield, Mass. The Sesqui-Centennial management has appropriated $50,000 to be used as premium money and for the expenses of putting on the show. This amount will be supplemented by special premiums from a number of the livestock record associations so that the total amount of premiums offered will be approximately $70,000.

Should Be Largest Ever Held in East

The attractive premium list and the fact that the show is held the week before the Eastern States Exposition at Springfield, Massachusetts, should bring to Philadelphia a livestock show that will surpass anything that has ever been held in the eastern territory. Plans are now under way to bring special trains of livestock exhibits from the Indiana State Fair at Indianapolis, from the Michigan State Fair at Detroit, and from the National Livestock Exposition at Toronto, Canada.

In addition to these special trains exhibits will come direct to the show from the West Virginia State Fair at Wheeling, from the Connecticut State Fair at Hartford, and from the Maryland State Fair. All of these fairs and expositions are held the week before the Philadelphia show and will be used by exhibitors from all sections of the United States as stop-over points before the show in connection with the Sesqui.

The livestock show will be held under the direction of the livestock record associations and the Sesqui-Centennial Exposition. Mr. Barney Heide, who has been the general manager of the International Livestock Exposition, Chicago, Illinois, for many years, has been secured to manage this show. The management of the Sesqui-Centennial Livestock Show will not interfere with his management of the International Livestock Show at Chicago because the latter show is not held until the first week in December.

Mr. Oakleigh Thorne, who is owner of Briarcliff Farms, Pine Plains, New York, and a prominent livestock breeder, has been selected as president of the show. An executive committee of five men representing each class of livestock has been selected to cooperate with Mr. Heide and Mr. Thorne in the management of this show.

The following men are members of this committee: Ellis McFarland, Chicago, Illinois, secretary of the American Percheron Society, will represent the draft horse interests; R. J. Evans, Chicago, Illinois, secretary of the American Duroc-Jersey Swine Record Association, will look after the swine interests; Robert Scoville, New York City, president of the Guernsey Cattle Breeders' Association, will look after the interests of the dairy breeds; F. W. Harding, Chicago, Illinois, secretary of the Cotswold Record Association and general manager of the American Shorthorn Breeders' Association will represent the sheep interests, and W. H. Tomhave, secretary of the American Aberdeen-Angus Breeders' Association, will represent the beef cattle interests.

Exhibits to Come from All Over the Country

The exhibits for this show will be drawn from all sections of the United States and Canada. The attractive premiums and the opportunity of exhibiting at a world's fair will bring to Philadelphia the very best herds and flocks that are produced in America. It will bring to the door of the eastern farmer the very best representatives of each class of livestock produced in America. It will give him an opportunity to view a livestock show that will rank with the very best that has ever been held in America.

CHAMPION X—exclusively for Fords—packed in the Red Box
60¢

CHAMPION—for cars other than Fords—packed in the Blue Box
75¢

PRICE

Think of Forty-Million spark plugs a year. Only such a vast production could build Champion superior quality at such low prices as 60 and 75 cents. The savings of our enormous output are enjoyed by two out of every three motorists the world over.

A new set of dependable Champion Spark Plugs every 10,000 miles will restore power, speed and acceleration and actually save their cost many times over in less oil and gas used.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

ASIDE from the significance attached to Easter by most of the Christian churches, the season seems to be suggestive of rejuvenation in everything. Not only does vegetation arouse itself from its long sleep, but hope and ambition stirs anew in the human breast. There is a spiritual as well as a physical resurrection at this time of year, and no matter how low the spirit of man has been or how dejected because of failure and discouragement normal human beings feel like beginning anew as the growing season opens before them. The cycle of life seems to be constructed somewhat after the manner of a huge toboggan, or "loop the loop." Part of the time we are at high points of ecstasy, and again at the lowest nadir. But this is no time for spouting philosophy. The grass has begun to grow, the buds are swelling and there are many things to do to bring about a successful harvest.

✣ ✣ ✣

PART of the renewed vim with which we attack the spring work is due to the return of "Black Joe," our farm hand, altho that is not his name but one we attached before we learned what it was. Two years ago a man carrying his belongings stopped under a tree at the end of the early potato patch and waited until I came to the end when he asked for work. The day was hot and the weeds were growing fast. I was not much impressed with the prospects of hiring a good man by taking one who was looking for work when hands were in demand. But I thought I would risk it for that day and the next. He started in and I found very soon that I was only half a hand with a hoe. He could do more and better work than I could when I did my best. Very soon I found there was other work which I must do and I let him finish the potatoes. He stayed that summer as long as there was anything to do. When he left, he said he would be back the next spring.

✣ ✣ ✣

WE HEARD nothing of him until he turned up about the first of April a year ago. He did valiant service all summer, dropping out of sight when the season's work was done but promising to come back this spring. We did not build much on that promise, but sure enough "Black Joe" reappeared with the return of the birds a few days ago. He is not by any stretch of imagination a mental prodigy, but long practice and a willingness to work make a valuable helper on a truck farm.

✣ ✣ ✣

ANOTHER load lifted when we were able to secure a horse which seems well suited to our business. There may be those who remember my statement two years ago that it was the desire to develop a farm business that could be run without a horse or horses. It was not long before we found that it was impossible to get machinery that would do everything about a truck and fruit farm; that there were some duties which required the services of a good dependable horse. So we bought one of low money value but which, like the colored man, has had long experience in such work.

✣ ✣ ✣

NO ONE will ever write a book about me such as was written about David Harum. I never had an inclination to trade in horses. I have bought and sold a few and traded horses two or three times. So far, my judgment has stood me in good stead, with one exception, but I do not consider myself infallible in judging a horse. The changing times have left behind an interesting class of men represented in every neighborhood a generation ago,—the horse jockey. My experience and observation are that a layman who makes no pretentions to being a judge of horses runs less chance of being "gyped" by a practiced horse "dealer" than he does when buying from or trading with an "honest farmer."

✣ ✣ ✣

THE lateness of the season has prevented the planting of cabbage and tomato-seed as early as we would like. We planted Golden Acre cabbage seed on Good Friday, not because we are superstitious, but because it was as soon as we were ready. The hotbed is ready now (April 5) to sow early tomato seed. We are pinning our faith on Penn State Earlianna for early plants. A bed of Early Jersey Wakefield cabbage will be planted yet. Last year we had wonderful success in sowing the late cabbage seed (Danish Ballhead) in rows in the truck patch.

THE CHEERFUL PLOWMAN

Biddy Likes Privacy

"A COVERED nest is what I crave," Old Biddy seems to say, "a place as private as a cave where I may go to lay! I am not forward, bold, and brave, but modest in my way! There is an instinct deep in me, I know not whence it came, an instinct any one may see in any kind of game, no matter whether wild and free, or weaker-winged and tame! It is an instinct that requests when laying time is nigh the most secluded types of nests away from searching eye, where friends, or foes, or passing pests may neither come nor pry! No hen who is a hen at all will lay her quota, friend, in boxes nailed against the wall with neither top nor end, this goes against her native call, against her grain and trend! No hen of culture, sense, and grace, will ever do her best if forced to lay in public place in public type of nest, she feels such action is disgrace, it is a social test!

"You human folks, you're bound to own, have times as well as we when you prefer to be alone where no one else may see, have modest instincts deeply grown as instincts are in me! Now, if you wish one egg per day, my quota, I am taught, give me a place to hide away where prying eyes are not, give me a private place to lay, respect my inner thought!"—J. Edw. Tufft.

Eastern States Farmers' Exchange

Facing Facts Squarely

The directors of the Eastern States Farmers' Exchange have always faced facts squarely. From the first they saw that to succeed their Exchange must so order its enterprises as to stand up under the strain of shifting conditions. They did not always know what the future had in store but they so administered the affairs of their trust for their fellow farmers that the Exchange could meet each test.

They realized that the feed business is a highly complex one. To make their cooperative service successful, the Eastern States directors selected men of ability to administer its affairs and carry out their policies. They saw that managers of the right caliber could run a big cooperative economically, and that the other kind would be as extravagant and unsatisfactory as low-priced boarder cows.

So it is that the Eastern States Farmers' Exchange has been able to grow in eight years to handle a business amounting to $5,979,965 for 1925, at the remarkably low cost of 2.88% of gross sales.

The directors of the Eastern States Farmers' Exchange saw to it that the membership always be informed on the problems as well as on the spectacular accomplishments of their organization. They realized that informed members could and would be loyal to an enterprise run with their interests in mind on sound business principles. Eastern States members, for instance, know their Exchange cannot guarantee quality of ingredients as well as formulae of rations and sell at the same or lower levels that are quoted by concerns which have neither the obligation to maintain Exchange quality standards or to sell to all consumers regardless of local competitive conditions at the same schedule of prices.

Eastern States members have known, too, that their Exchange to give service must build up a capital reserve. As farmers they know from personal experience the handicaps which lack of working capital entails, and they have been eager to back their management in the policy of establishing a strong financial position. By pursuing the policy of building for the future, the Eastern States Farmers' Exchange has without the sale of a dollar's worth of stock built up out of pennies saved from the cost of tons distributed in eight years a surplus fund of $115,449, while at the same time the influence of its competition has reduced the schedule of prices and raised quality standards. Because of a sound consistent financial policy, the Exchange has been able to return to 1925 patrons a patronage dividend amounting to $30,000.

At the request of Pennsylvania and Maryland farmers, the service which the Exchange has been giving to New England and Delaware farmers is now being offered in these two states.

For information write the office.

Fenders and Pulley Extra

Plant Right With Fordson Power

Thorough cultivation and good seed contribute largely to the raising of any crop.

But no matter how well the soil is prepared or how strong and vigorous the seed, the best yields cannot be produced unless the seed is put in the ground properly.

It should be deposited in the ground and covered at an even depth in order that it will grow and ripen evenly, producing a uniform quality of grain.

With Fordson plenty of time is allowed to do a thorough and careful job of putting the seed into the ground. More acreage can be planted in a day and at a lower cost with the Fordson.

Plant on time and plant right this year with Fordson power. Then have your Fordson ready for the heavy work of crop cultivation and harvest which taxes the power on every farm. Your nearest Ford dealer will explain the payment plan that makes it easy to put the Fordson to work on your farm.

"Self-control is strength; right thought is mastery; calmness is power."

The Gasoline Tax

NEARLY $150,000,000 was paid in gasoline taxes in 1925 by motor vehicle operators. This amount is eighty-three per cent greater than the amount paid in 1924, and four and one-half times the amount paid in 1923. All but four states,—Illinois, Massachusetts, New York and New Jersey,—levy a tax upon gasoline. The tax varies from one cent per gallon in North Dakota and Rhode Island to five cents per gallon in South Carolina. The report, which is made by the Federal Bureau of Public Roads, states that the average consumption per vehicle was 430 gallons, and that the average tax paid by operators was $9.22. Nearly $135,000,000 of the total amount was made available for road purposes.

Our Foreign Markets

CERTAIN business analysts are growing somewhat alarmed over our dwindling trade with European countries. During the past year there has been a very noticeable decline in the volume of goods shipped across the Atlantic Ocean. In fact, the trans-Atlantic sales at the present time are at a seriously low level. Professional optimists are active pointing out the necessity of seeking new markets, but when asked to be specific they are unable to tell where they are to be found. Where, for instance, is there any place to which we can send our cotton, our wheat, our meat products and our steel except to European countries? Only those countries are equipped with factories and skilled workers which need these products.

Neither does it help matters to know the cause of the slump. Europe is "coming back" and is able to produce again,—at least nearly to the extent of her financial ability to operate her factories, altho her people are not able to buy as in normal times. Those countries must sell abroad and they resent the American tariff laws which prevent them from selling here profitably, hence they are inclined to discriminate against us. It is said that the sales of American apples have decreased fifty per cent this season, presumably because of the scare raised over the danger of arsenical poisoning. Since the real danger is almost negligible, it is thought that there is more than fear behind the move. America must continue to sell abroad, or reduce her output. How shall it be done since our costs of production are so much above that of the world level?

Now It Is in the Open

CENTERED in a large area of white space in the Philadelphia papers of April 8 appeared the advertisement of a large Philadelphia milk distributor bearing this heading: "THE GREATEST ACCOMPLISHMENT IN THE HISTORY OF MILK PRODUCTION. An Achievement of Vital Importance to Every Family in Philadelphia." The advertisement stated that the tuberculin-testing of all cows producing "A" milk for this concern had been completed. It went on: "This is the most drastic and costly step ever taken by any large dairy organization to protect your milk supply. It represents the largest single volume of tuberculin-tested milk in the world." The last sentence read: "We are sure that this will appeal to every thoughtful physician and every user of milk."

For years leading farmers and dairy organization men in the Philadelphia milk shed have almost held their breath when the subject of the testing of cattle for tuberculosis has been brought up, especially if there was a city newspaper reporter within hearing. They saw how the tuberculosis agitation hit the milk market in other cities, particularly Chicago, and they feared the same thing in Philadelphia.

The dairy leaders were perfectly justified in their attitude. They knew that city consumers were running no risks, because all their milk was pasteurized. But they also knew that city mothers couldn't be reasoned with; it would be practically impossible to make them trust in the reliability of the pasteurization process. If a cry went up in the city against milk from untested herds, the farmer would be the one to suffer.

It remains to be seen what effect the advertising of this one distributor will have upon the market for untested milk in Philadelphia. The more this concern tries to push its advantage by advertising, the greater will be the demand upon it, and upon other distributors for milk from disease-free herds. Eastern dairymen are already well along on the road toward tuberculosis-free counties and states. The only thing to be regretted is that this new pressure from the consuming areas may speed up the area testing work so fast as to cause unnecessary hardship and monetary loss to milk producers.

Decision on the Holstein Case

SECRETARY WILLITS has decided not to recognize the recently established Holstein-Friesian Registry Association. The responsibility of making a decision on this case was put upon the State Secretary of Agriculture by the tuberculosis eradication campaign now in progress in Pennsylvania. As a higher indemnity is paid for condemned registered purebreds than for unregistered animals, he had to decide whether cattle listed with the new organization could be considered registered, according to the meaning of the law.

After considering both sides of the question carefully, Secretary Willits stated his decision as follows:

"The registration of the Holstein-Friesian Registry Association, Inc., is not of such a nature and cannot be surrounded with safeguards such as to be prima facie as good evidence that the animal is a registered bovine as is the registration in the old association, the Holstein-Friesian Association of America, and, therefore, to protect the monetary interests of the state, I feel obliged to refuse to recognize the registration of the Holstein Friesian Registry Association, Inc., and shall recognize only the registration of the Holstein-Friesian Association of America, which from all evidence offers the most accurate and dependable registration obtainable within the Holstein-Friesian breed."

The Holstein-Friesian Registry Association may appeal to the courts, hoping to obtain a reversal of this decision. It is impossible, of course, to predict what might be the result of such action. However, thoughtful dairymen will commend Secretary Willits for making a decision which seems more than justified by the facts of the case, and which, furthermore, is for the best interests of the great majority of Holstein breeders.

Straw Votes

THERE is a great deal of agitation just now in favor of modifying the prohibition law. The wet Congressmen are pushing the matter to the limit. They base their demand upon the results of straw votes taken by several wet newspapers thruout the country. The claim is made that the votes indicate a majority of four to one in favor of such action. Let us see what similar votes in the past are worth.

Probably the biggest nation-wide vote ever attempted on the subject was conducted by the Literary Digest in 1922. That vote showed 25,511 to 20,285 in favor of a modification of the Volstead Law. Yet only two months later a state-wide referendum gave a majority of 189,487 against modification.

The Digest's vote was 28,897 to 15,565 against prohibition. But only two months later the state voted for prohibition by a majority of 34,000. In Michigan the straw vote indicated 14,474 for repeal to 11,207 against, while at the following election the state rolled up a majority of 207,320 against legalizing beer and wine.

We merely mention these facts now to allay any undue excitement which might arise over the results of the present agitation based upon the vote being taken by those who desire to get the results they are getting.

To Tax Oleomargarine

THERE is a bill before Congress, known as the Beck Bill, which would put a tax of ten cents per pound upon all oleo manufactured. There has been for some years a tax of ten cents per pound on oleo colored in imitation of butter. This was found necessary in spite of the requirement that all oleomargarine be plainly marked as such.

Dairymen have generally taken the position that the manufacture of oleo was a legitimate industry so long as it was healthful and sanitary, but they have demanded that it be sold for what it is and not be palmed off as butter. We doubt the expediency of the proposed law and, furthermore, it is altogether possible that it would, if passed, be declared unconstitutional. There is sold in this country about 200,000,000 pounds of oleo annually. A large proportion of the users are those who feel that they cannot afford real butter at the price it commands and the nearest substitute to be found is oleomargarine. So long as they know what they are buying, and so long as it is sold at a fair price we do not believe in arbitrarily raising that price by the imposition of a tax laid primarily for the purpose of stopping its manufacture. Pennsylvania Farmer has always championed and still champions the cause of the dairy cow, but we are sure she does not need the aid of unfair laws to hold her own against competition.

Washington Letter

HOUSE COMMITTEE HOLDS HONEST FABRICS BILL.—Senators and Congressmen are receiving many letters from their constituents, asking for the enactment of the Capper truth-in-fabrics bill. It is expected that it will pass the Senate at an early date. It is tied up in the House Interstate and Foreign Commerce Committee, however, and unless it can be transferred to the Committee on Agriculture it is doubtful if it can be brought to a vote in the House. The farm organizations are united in favor of this bill, and are ready to push the fight for it whenever there is a possibility of making progress. There are indications that the letters from back home are already having a salutary effect upon Congress.

FOREST WEEK.—American forest week, which is proclaimed for the week of April 18-24, is accomplishing much in calling attention to the necessity for forest tree planting. Each year reports coming to Washington tell of increased interest in the subject. Many farmers are annually enlarging their forest plantings.

DAIRY LEADERS GOING TO WASHINGTON.—Representatives of the dairy industry will hold a conference with the dairy specialists in the Department of Agriculture at Washington, April 19, 20 and 21st. It is called by the American Dairy Federation Committee on "cooperation with the government departments having to do with the dairy industry."

Those who attend will visit the Dairy Bureau's experimental farm at Beltsville, Maryland, where they will meet the men who are digging into the foundation problems of breeding and feeding for milk and butter production. They will be conducted thru the offices of the Dairy Markets Section in the Bureau of Agricultural Economics, and will meet the specialists in the Bureau of Dairying.

TUBERCULOSIS CUTS MILK PRODUCTION.—Tuberculosis has a depressing effect on milk production in affected herds, according to reports received by the Bureau of Animal Industry. In one case it was found that milk production in the herd began to decline almost simultaneously with the development of tuberculosis among the cows. In two years the spread of bovine tuberculosis caused a decrease in income from the sale of milk amounting to $870 for a herd of ten cows.

Information obtained from hospitals by the Bureau of Animal Industry show that one-third of all tuberculosis in children is of the cattle type, chiefly transmitted in milk from diseased animals.

POTASH DISCOVERED IN TEXAS.—Rich potash deposits have been discovered in Texas, according to the United States Geological Survey. It is claimed that one deposit in northwest Texas outranks in potential production and richness the Germany potash field, averaging ten per cent pure potash, and covering an area 200 miles long and 100 to 150 miles wide.

What this means to American agriculture may be indicated by the fact that it will soon be necessary for our farmers to use 600,000 tons of potash annually to maintain crop production, and that at present the German-French potash syndicate has control of the world supply.

A LAME EXCUSE.—Farmers are frequently told by members of the congressional committees that failure of Congress to enact constructive farm relief legislation is due in considerable measure to the inability of the farmers to get together on any one proposed measure.

It is the belief of Dr. T. C. Atkeson, of the National Grange, and others, that this criticism is not just to the farmers. It is a lame excuse on the part of Congress for inaction. If the twenty-one members of the House or sixteen members of the Senate Committee on Agriculture cannot agree on a bill, and they seldom do, the farm leaders ask, how can they expect the six million farmers to be of one mind on matters of legislation?

JARDINE OPPOSES FEE IDEA.—Congressman J. N. Tincher, of Kansas, a member of the House Agricultural Committee, says the hearings before the committee will end soon, and that a farm relief bill will be reported out, but it will be unlike any of the pending measures. Secretary of Agriculture Jardine continues his opposition to any farm relief legislation that embodies a fee on agricultural products to be used in handling the surplus problem.—E. E. Reynolds.

Harrisburg Letter

FEW FARMERS FILE.—Lists of men filing petitions to be candidates for members of the State Senate and House of Representatives show comparatively few giving occupations as farmers. In years gone by, twenty years ago, for instance, there was always certain to be a fair percentage of farmers in the lists, some probably not being entitled to be called such, but so rated just the same. The Legislature which will end its term in the coming December, following the November election, contained few farmers. Prospects are the next will have fewer. One of the reasons is the increase of town population. Here and there some purely rural counties or districts elect men who are farmers, but the bulk of them appear to be merchants. There are more people engaged in the automobile business listed among aspirants for nomination this year than ever before. Professional men abound in the lists.

A little more cooperation needed here, too.

CLOSE NURSERY WORK.—State inspectors are working on inspection of stock being sent out from nurseries in eastern Pennsylvania counties and the scrutiny being given in the establishments in the Japanese beetle belt in vicinity of Philadelphia is the closest ever known. The inspection regulations are being very carefully followed according to reports coming here. Patrol work because of the beetle will not start for some time.

FARM LABOR SITUATION.—Some interesting sidelights upon the farm labor situation are to be had from the semi-monthly reports of the State Bureau of Employment which has been making efforts in conjunction with the Department of Agriculture to get hands for farmers. In Lancaster, Reading, Allentown and other eastern Pennsylvania districts the demand is comparatively small and requests are made for some specialists. In western Pennsylvania there are more requests for farm help and demand for married people. Certain up-state offices say frankly there are requests for men, but that wages and other conditions fail to attract workers. Highway construction is also going to be a factor in the farm labor supply. Here and there foreign help has turned to the soil, but industries and mining continue to hold that class except in truck farming near cities.

LESS NUISANCES.—What is said to be the most encouraging report ever made by the State Department of Agriculture on seed analysis is about to come off the press. It is the result of extensive study and test and the statement is made that there is about fifty per cent less thistle and dodder to be found in seed mixtures than in 1924.

OTHER STATES' PEACHES.—Rather grim figures about what the freezing weather of just a year ago did to the peach crop of southern Pennsylvania have been assembled at the State Capitol. Franklin County is shown to have shipped exactly the six cars of peaches talked of last summer. The figures confirm the reports of last year. Incidentally, it is shown New York raced Georgia for the furnishing of Pennsylvania's supply and that North Carolina is sending in much fruit.

SCRAMBLE FOR CONTRACTS.—Probably one of the most remarkable situations ever known in the state highway building work is turning up in the keen competition for Pennsylvania contracts. The last three letting anywhere from eight to twelve firms from the other states have bid, some of them concerns handling heavy construction with big resources and equipment as well as experience. Over twenty bids for a contract worth possibly $200,000 is not uncommon development. The state is able to place its work at good prices.—Hamilton, Harrisburg.

New Jersey Letter

STATE LEGISLATURE CLOSES.—The New Jersey Legislature closed its sessions last week with the farm legislative program passed 100 per cent. The bills asked by the Joint Legislative Committee representing the organized farmers of the state were less numerous than in the last two years, altho more important in some respects in their hearing upon current agricultural needs of the state. The principal measures in the farm program now law are the fruit tree bill, allowing recovery of damages for fruit trees which prove untrue to name; a beekeepers' bill, to control bee diseases; amendment of the truancy law, allowing local recorders to try cases; and inspection measures to prevent spread of livestock diseases.

ROADSIDE MARKET ASSOCIATION.—The plans of roadside market owners operating under the New Jersey standard plan have materialized in the form of a state association of roadside market owners. Rules and regulations governing control of these markets have been adopted, and insignia agreed upon which will be shown on the stands of all members. The plan is to extend the membership widely thruout the state, to the point of improving the quality of roadside market offerings and the methods of doing business.

MACHINERY INTEREST CONTINUES.—The interest in power machinery and farm implements, developed by the State Department of Agriculture at the suggestion of Governor Moore in late March, gained ground decidedly in early April. The farm labor situation in New Jersey is far from satisfactory and the efforts of department workers and extension service personnel will be placed upon labor saving devices this spring. The small garden tractor has gained in popularity and is rapidly finding a place in the economic scheme of farm management.

POULTRYMEN JOIN EGG CAMPAIGN.—Committees from the southern counties of New Jersey have joined with the National Egg Day Committee and the National Poultry Council of the United States to boost the food value of eggs. In Cape May County the poultry association has appointed John N. Reeve, Theodore Young and W. Collins Thomas as a committee for that end of the state to develop exhibitions showing the food value of eggs at resort cities. Similar work is being done in other counties. The campaign is pointing out the well-balanced digestive food nutriment in eggs, the high vitamin content and economy of purchase on a quality basis.—B.

New York Letter

POSTAL RATE CUT NEEDED.—Farmers are anxious for a return to former postal rates. Baby chick shippers are going back to the use of the express companies for their shipments, tho they prefer the postal service were it not so high on this class. Rate increase also hampers the use of the mail for other things that have much to do with rural prosperity and development. The rates on newspapers and magazines are especially unpopular.

RURAL SCHOOL BILL AMENDED.—The "home rule" rural school bill has been deemed hopeless of passage and has been amended, and now the main change over last year's bill permits districts to appeal to the courts in cases where the decrees of the commissioner of education in consolidation matters seem unjust to patrons. This virtually makes it a new bill. It now seems likely to pass in the amended form, tho farm organizations preferred to let last year's bill stand as it was.

GRANGE OPPOSES GAS TAX.—State Grange Master S. L. Strivings announces that his organization is opposed to the Goodrich bill to put a tax of two cents a gallon on gasoline, because such funds would not be used to aid counties to reduce the direct property tax, as the Grange had recommended.

consolidation matters seem unjust

MILK PRODUCERS' COMMITTEE.—The formation of a milk producers' program committee to develop a plan for federating a milk producers' organization that should be effective over the New York milk shed is complete. It met in Albany April 13.

GOVERNOR WILL NOT AID CORNELL.—About the only upstate recognition that was to be given in the ten-million-dollar-per-year bond issue voted last fall is now to be lost for this year. It seems from an announcement that the Governor, after endorsing an allotment of $1,250,000 for a new building at the Cornell College of Agriculture, now believes this should wait a year, and that the money should go to the construction of state institutions and parks.—M. G. F.

Insure 100% Results
by adding just
2%
to spray costs

The best insecticide in the world can't protect your fruit unless the fruit is completely covered. Between the drops of spray all sorts of insects and fungi can find plenty of room to start trouble.

KAYSO corrects just that condition. It spreads the spray in a uniform, all-over coating, instead of a splotchy, uneven pattern. And it guards the spray against run-off during rains or heavy dews.

One pound of KAYSO is usually enough for 100 gallons of spray, so that it rarely represents more than 2% of the cost. And, if you figure in the expense of labor, KAYSO amounts to less than 2%. Isn't it worth that little additional investment to make sure of 100% efficiency?

KAYSO may be used with any spray mixture. Lime-Sulfur, Bordeaux, Arsenate of Lead, Nicotine and Whitewash, all cover better and stick longer when mixed with KAYSO. In combined sprays it retards harmful reactions and the formation of sludge.

KAYSO is the perfect emulsifier in the home making of oil sprays that will not break down in the hardest water.

Ask your dealer for further particulars, or write to us direct.

Spraying—The Art of Controlling Insect Pests

SPRAYING is the art of controlling injurious insects and diseases by covering the plant with certain chemicals that kill these pests. The chemicals may be applied with water, as in ordinary spraying, or in powdered form, as in dusting.

Spraying is the chief, but not the only means, of controlling pests. Sanitary measures help, such as prompt burning of the prunings, and plowing under leaves that are diseased, as with apple scab or mummied peaches that have rotted with the brown rot fungus. Open pruning makes conditions in the tree less favorable for disease. Much may be done in the selection of varieties that are least susceptible. The tilled orchard is less liable to certain troubles than the sod orchard. Nevertheless, all orchards, both sod and cultivated, must be sprayed or dusted, in addition to these other precautions.

Should Know Their History

Spraying by rule of thumb seldom is satisfactory. The grower should know the pests he is spraying for and their life history. We spray to control three types of pests: chewing insects, sucking insects and fungous disease. It is necessary to use a different class of spray for each type of pest.

Chewing insects are those that bite the tissue of the leaf or fruit, and take it into the stomach. Examples are the potato bug, currant worm, tent caterpillar and codling moth (which makes wormy apples).

Chewing insects are controlled by spraying with a poison which the insect takes into its stomach with its food. Arsenic is used mostly, principally in the form of arsenate of lead. Formerly Paris green was used, but it is not as dependable as arsenate of lead.

Sucking insects do not bite or chew their food, but suck up the juices of the plant thru a long, tube-like mouth part. This is thrust beneath the surface of the bark, leaf, or fruit, where no spray can be placed, hence spraying with arsenate of lead is useless against them. Examples are the common plant lice, of many species, the scale insects (which are merely plant lice covered with a shell) and red bug.

The sucking insects are controlled by spraying, not with a stomach poison, but with a penetrating caustic material that will kill them when it strikes their bodies, such as lime-sulphur spray (winter strength), oil sprays, soap sprays, and tobacco sprays. When tobacco is used in dusting, the insect is killed by suffocation or asphyxiation by the fumes of the nicotine.

When to Apply Spray

In spraying for chewing insects, the spray may be applied before the pest appears, and the chemical will remain on the fruit or leaves for some time, until the insects begin to feed. In spraying for sucking insects, on the other hand, nothing will be accomplished unless the insects are present at the time the spray is applied, since the spray kills by contact. Hence, the grower waits until the aphids have hatched, and are feeding on the opening buds, before he sprays for them.

A fungous disease is a low form of plant life, not of insect life. It differs from ordinary plants, chiefly in the fact that it contains no chlorophyl, or leaf green, the sole means by which a plant can manufacture plant food. Hence it lives as a parasite on higher plants, which do have chlorophyl. The fungous disease propagates by means of a multitude of very minute seed bodies, called spores. These are disseminated by the wind and other agencies. When they fall on the leaf, fruit or bark they germinate in the presence of moisture and temperature, just like a seed, and send their roots (called mycelium) down into the tissue of the plant, for the food material that the plant has made for itself.

Then It's Too Late

After the spore has germinated, and has sent its roots down into the host plant, no spray can kill it. The vulnerable point in the life history of a fungous disease is the spore. It can be killed before it germinates, usually with a spray containing copper (as in Bordeaux) or sulphur (as in the lime-sulphur spray). Common examples of fungous diseases are potato blight, apple scab, and brown rot of peaches, plums and cherries.

Most of the common enemies of plants fall into one of these three classes, and can be controlled by spraying. A few serious troubles are not amenable to spraying treatment. Among these are the so-called "physiological" diseases, which, so far as is now known, are not due to a distinct germ, as is the fungous disease. The "Baldwin spot," or bitter pit, of apples is an example.

The fire blight of apples, pears and quinces, also, cannot be controlled by spraying, since the bacteria which cause this disease work beneath the bark, where no spray can reach them. We depend on resistant varieties, keeping the trees growing slowly, and cutting out the winter hold-over cankers, to control blight.—S. W. Fletcher.

Editor's Note: Next week Dr. Fletcher will discuss the factors upon which successful spraying depends—timeliness and thoroness—and will take up the question of materials most commonly used and the equipment necessary for the home orchard.

The Aphids Are Coming

ACCORDING to an intensive survey of conditions in southeastern Pennsylvania counties and reports from farmers in the state the eggs of green and grain aphids, usually so numerous on apple trees at this time of the year, are few in number this spring. It is expected that there will be no severe outbreaks of these two species the coming summer.

Green and grain aphids are not the ones which damage apples the most, however. The rosy aphis is the most injurious, according to G. F. McLeod, assistant extension entomologist of the Pennsylvania State College, and may be present even if few eggs of the other aphids are found. Experiences of a quarter of a century have shown this to be true.

Fruit growers who desire to protect their fruit from the aphids may do so by putting nicotine in the lime-sulphur-nicotine combination of the delayed dormant spray if they are not using oil emulsion or oil sprays. If the latter are used, close watch should be kept for the rosy aphis. The entomologists say that if found, an application of nicotine in the pre-pink spray at the rate of one pint of nicotine to 100 gallons of water will end the insect's existence.

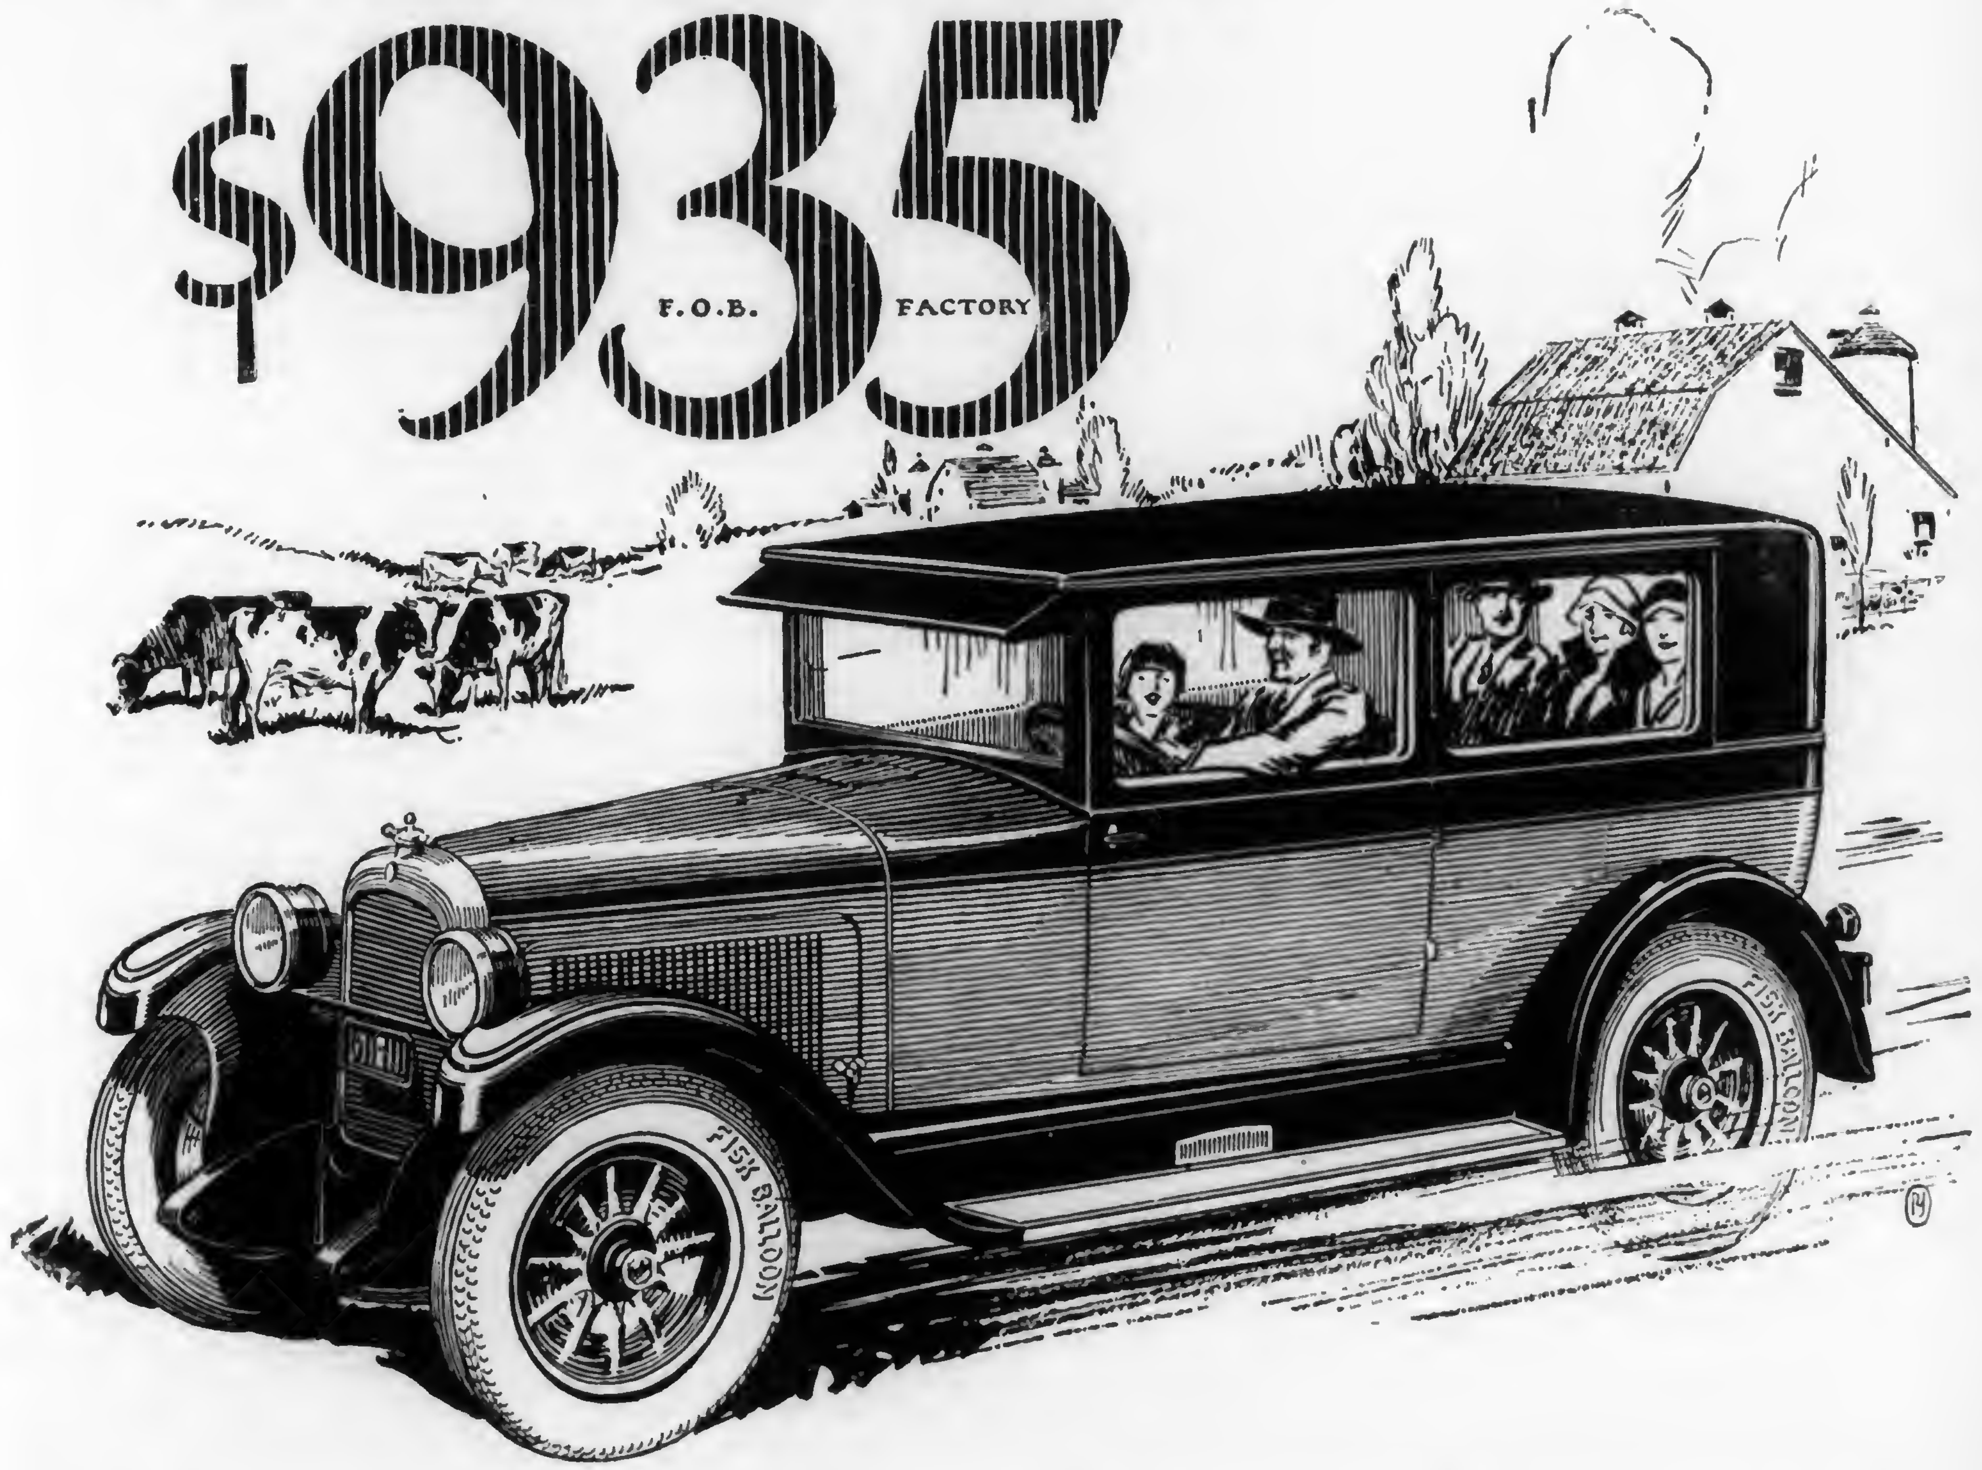
6 CYLINDER SEDAN

$935 F.O.B. FACTORY



No car in its class has such power!

With 40 full-brake horsepower sent in a straight line from the motor through to the rear axle-shaft, this engine delivers more power and speed and pulling-ability than has ever before been known in its size or price-class.

But, forget everything its scores of thousands of owners say about it. Test it yourself—set your own conditions. You choose the road. You pick the hill. You fix the traffic point. You name the ruts, the turns, the mud, the sand . . .

If this big, extra-powerful, gravity-balanced Overland Six does not "come clean" on every count—if it fails to register *100%-plus* at every point from which, in your own opinion, car-performance should be measured—we lose. You win. This car is offered on the flat pledge that it will out-run, out-pull, out-accelerate any other car you care to test against it.

With bigger, wider doors, more inside room, longer, higher windows, rich Baker Velour upholstery, a longer wheelbase and such quality equipment as Gabriel Snubbers on the front at no extra cost, one-piece windshield, Sun-visor, windshield wiper, Fisk full-size balloon tires, and long genuine Chrome Vanadium springs especially built for balloon tire equipment, this car is a phenomenal buy. At $935, it is the world's biggest dollars-worth in middle-weight Sixes.

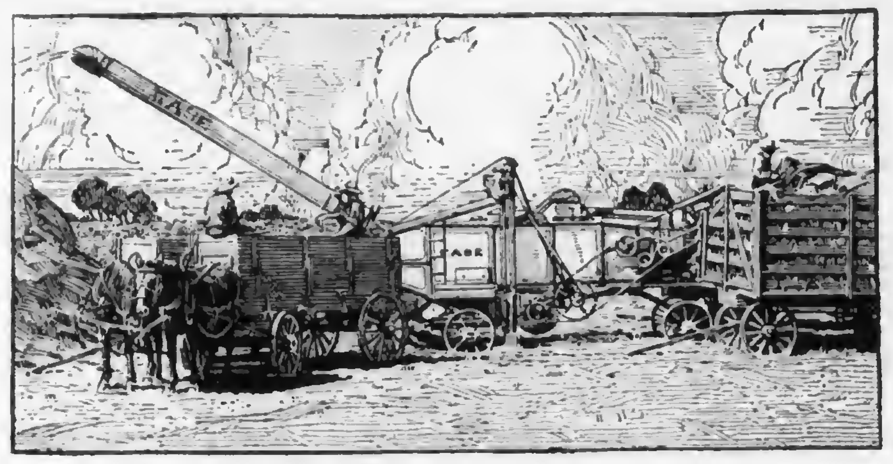
OVERLAND SIX



Take Your Full Profit

ANY man who can thresh his grain whenever he wants to is better off than the man who can't.

He can save more of his grain. He can get it to market in better condition. He saves both himself and his wife a lot of hard work. He can get at his Fall work earlier. He makes more money.

To make the most of these advantages, own a Case Steel Thresher. More than 50,000 Case owners will tell you that—

The Case is simple—you can do good threshing the first time you use it.

It is light running—every Case machine has great capacity for the power required.

It threshes all grains and seeds—fast, clean and without waste.

It lasts for years—most of the first Case steel machines, built in 1904, are still at work, and the present machines are much more durable

It is fireproof, weatherproof, and demands little expense or work for its upkeep.

These are money making advantages. The Case has *all of them.* Therefore, you can make *more* money with a Case. Write for "Profit by Better Threshing," which tells the whole story.

Established 1842

For eighty-four years this Company has specialized on machines that made more money for farmers. The Case thresher, tractor and combine, are all examples of the high earning capacity standards of Case products.

KELLYS' Certified True-to-Name Fruit Trees

The Cortland Apple "Sticks" to the Tree

The Cortland resists the whipping of the winds and hangs tenaciously to the tree. This means less falling and spoiling. It inherits its strength from the Ben Davis and its tastiness and color from the famed McIntosh—these two apples being the parents of the Cortland.

The hardy Cortland fruits early and keeps like a late apple. It is as large or larger than the McIntosh, bright red in color, crisp, tender and juicy.

Like many thousands of other Kellys' fruit trees, the Cortland is certified to be "True-to-Name" by the Massachusetts Fruit Growers' Association. Their Lead Seal stays on the tree until it bears.

Write now for your copy of the big Kelly catalog. Then order soon to insure getting your share of our guaranteed "True-to-Name" stock. We have no agents—you deal direct with us.

Garden and Truck Crops

Maggots in Soil

What shall I do for soil which has the cabbage maggots? I cannot raise radishes, turnips, rutabagas, onions, and cucumbers did but little good in my garden last summer.—E. L. L., Clearfield County, Pa.

The maggots found in roots of vegetables are very hard to kill off. The root maggot which is the most troublesome may be found in the flesh of the roots of radish, turnip, cauliflower and cabbage. Other species are found on onions and roots of cucurbits such as squash, cucumbers, etc. These maggots, if plentiful, will completely ruin the crop.

Briefly, the life cycle of these troublesome insects is as follows: The maggots change to puparia in autumn, remain in the soil in this stage thruout the winter. The pupae finish their development in the spring and as flies emerge about the time early cabbage or cauliflower plants are being set out or are in the plant beds ready for setting.

Development of the Insects

The female fly begins to lay her eggs soon after emerging, probably within three to five days. These eggs are deposited on the stems and roots close to or just below the surface of the soil. The eggs hatch in five or six days and the young maggots burrow into the roots. The insect remains in the maggot stage about twenty days before it matures or passes to the pupa stage. There may be several broods in a season.

It is seen that the very nature of this insect makes it very difficult to control the small, almost invisible fly,—the maggot working under ground in the roots. Yet they are very prevalent. In spring during good growing weather plants in the field may look in good condition, but let there be a drought for a week or so or a few real hot days in June and the plants may suddenly collapse.

The maggots have been working on the roots; with cool weather there is small evaporation from the leaves and consequently only a small amount of water is drawn from the roots. When hot weather begins there is much greater evaporation, the roots riddled with maggots are called upon to furnish larger amounts of water to the leaves. This they cannot do (because they have been nearly destroyed) and the plant withers and is stunted. In the case of turnips or radish, the maggots are in the edible part of the plant. This means a total loss.

The most practical method of control at present seems to be to use a solution of corrosive sublimate (bichloride of mercury) to kill the eggs or the young maggots on the roots. One ounce of corrosive sublimate should be dissolved in eight gallons of water. Have a pail of this solution handy at time plants are set in the field. Pick up a handful of plants and give the roots a good dousing. Or if plants are already set, take a cup and pour about one-half cupful of the solution around the stem of each plant. Three or four applications should follow at intervals of about ten days.

Where large numbers of plants are grown in hotbeds or cold frames some growers have found it practical to make a cheesecloth frame. This is put over the bed and keeps out the fly. Corrosive sublimate can be purchased at the drug store.

Control on radish and turnip is very difficult, but some growers have been successful. Use a watering can and pour the solution along the row. You will find this expensive, also the rows are planted close together and it is rather difficult to get the job done right.

I will write later concerning maggot on onion and cucumber.—W. T. Tapley.

Strawberry Varieties

I am going to set out some strawberries for family use. Am uncertain as to which variety I should plant, common or everbearing and the variety of each. I wish you would help me out.—A. N., Bradford County, Pa.

One of the outstanding strawberry varieties for Pennsylvania today is Howard 17, sometimes erroneously called Premier. The plants are vigorous and make runners freely. The season is medium early. Berries are large, conical, light red, fairly firm, and have a mild flavor and good quality. Another good variety is the Marshall. This is a high quality berry and does best on rich soil.

Two of the most useful varieties of everbearers are the Progressive and the Superb. Both have perfect flowers. In general, everbearers have not been successful commercially, but are useful in home gardens.—W. T. Tapley.

Two Well Known Leaders

Left: George Wharton Pepper, United States Senator from Pennsylvania. Mr. Pepper is a candidate for the Republican nomination for the senatorship in the coming primary election. Right: William M. Jardine. Secretary of Agriculture in President Coolidge's Cabinet.

Beekeeping

IT DOES not pay to bother with weak, queenless colonies. Such colonies should be united with a weak colony having a queen and which will be benefited by the additional bees. Uniting can be done best by removing the cover from the queen colony and placing a single sheet of newspaper over it. Remove the queenless colony from its bottom board and set it squarely over the first colony on top of the newspaper. Thus the bees of the two colonies are separated by the paper, thru which they will knaw and unite peaceably.

Anytime after torn bits of the paper are seen at the entrance, the bees may be concentrated in the hive below and the upper hive removed. This is the best way to unite bees under all circumstances. Queenless colonies, if still strong, may be requeened by sending at once to some queen breeder for an untested queen.

Supply with Combs of Honey

Colonies short of food should be supplied with combs of honey. In case no honey is available then the only substitute is sugar syrup made of about half and half granulated sugar and water. Any of the commercial bee feeders may be used. A cheap feeder may be made out of a two-quart or gallon friction top pail such as used for honey, oysters or syrup. Puncture the cap with the end of a three-penny nail making fifteen or twenty small holes. Fill the pail with the prepared sugar syrup, press in the perforated cap and it is ready for use.

Remove the cover from the colony to be fed. Invert the pail of syrup on top of the frames right over the cluster of bees. Because of atmospheric pressure the syrup will not run out of the pail but the bees will insert their tongues into the small holes and take it out as fast as they can use it. A hive or super should be placed over the feeder and warm material, like a bag or blanket, packed in it to hold in the heat of the bees, and the hive cover placed over all to keep out the weather.

Always keep more honey in the brood chamber than the bees need for immediate use. Bees that are short of food will not rear brood in sufficient quantities to build up a strong colony. In many springs fruit bloom supplies all of the feed necessary for the bees but if bad weather keeps the bees in the hives, as it often does, then they will need plenty of food within the hives.

Need More Room

The strongest colonies will need more brood rearing room, in May, than is found in a one-story hive. Such colonies should be given a second-story of good brood combs. Good queens will occupy most of the combs in both stories and build up a far stronger colony than is possible in one hive body. Comb foundation will not do unless sufficient nectar is being brought in so that the bees will build comb. The early addition of room will tend to prevent swarming.

Some weak colonies having good queens will be found. For this kind of colonies the best practice is to see to it that they have plenty of food and a warm hive.

While rearing brood the bees require the high temperature of ninety-four to ninety-five degrees Fahrenheit. It draws heavily on their vitality to keep up this high temperature in a hive with walls made of a board less than one inch thick, in frosty weather. If the hives are not double-walled or in packing cases, a super full of dry chaff or shavings placed on top and the whole hive, super and all, wrapped with roofing paper will help greatly to keep the bees warm.—Geo. H Rea.

To Solve Your Heating Problems Come to
Heating Headquarters

THE planning and installation of a satisfactory heating sytem requires experience and ability that can only be acquired through years of study and practical work. The selection of the proper size and style of furnace for your home should, therefore, be given to experts—men who know heating and ventilating from the ground up.

We individually and collectively have sold and installed many different makes of furnaces during our years in this business, and it is, therefore, a tribute to CALORIC PIPE and PIPELESS Furnaces that we now recommend and sell these famous heating systems. It is our belief that no better values can be obtained anywhere.

Caloric Furnaces have fewest seams and joints, due to the use of one-piece radiators and firepots. This improved construction makes them gas and dust tight. Unusually heavy castings, extra size casings and a wonderful SMOKE CONSUMER are other superiorities which greatly increase heat, save fuel and reduce smoke.

Think of the advantage of having an experienced and responsible heating man in your own neighborhood to give you expert advice and prompt service. It will pay you to call at the nearest Caloric Agency for a demonstration; or, if you prefer, communicate for further information direct with the manufacturers, The Monitor Furnace Company, at Cincinnati, Ohio.

A convenient time payment plan enables you to pay as you save

PAN-A-CE-A
prevents the back-sets

IF YOU want early broilers—

If you want November layers—

You must avoid the back-sets in your growing flock.

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily.

Then never mind about disease, bowel troubles, leg weakness and gapes.

Pan-a-ce-a takes care of all that.

Pan-a-ce-a tones up the appetite —promotes digestion.

Pan-a-ce-a helps your flock to turn the feed to good account—growth, bone, flesh, feathers.

You can tell a Pan-a-ce-a flock every time by the good feeling—always happy and industrious.

Costs Little to Use Pan-a-ce-a

The price of just one two-pound broiler pays for all the Pan-a-ce-a 200 chicks will eat in sixty days.

Tell your dealer how many chicks you have. He has a right-sized package for every flock.

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

Maintain Body Weight

IN the spring of the year when eggs are cheap, production naturally high, and other work pressing the tendency on the part of most people is to neglect the laying birds. The result of this neglect is that the birds lose in body weight. They cannot lay heavily and maintain their weight unless given special attention. The spring is the season when Mother Nature tells the hen to lay and she carries out her program even if the body suffers. In a study of 435 birds the writer found that seven out of ten lost weight during the spring season.

This loss of weight would not be so serious were it not for the fact that in the same study I found that nine out of every ten of the culls in the summer were birds that had lost weight during the spring; also that the best summer and fall layers were the birds that had maintained their weight during the spring. Summer and fall eggs are worth quite a little more than spring eggs, in fact they are worth even more than winter eggs and anything that we can do to increase summer and fall production will ultimately react to our benefit. Weight, then, must be maintained during the spring.

Continue Heavy Feeding

The best plan to follow for maintaining spring weight is to continue the heavy grain feeding of the winter months, namely twelve to fourteen pounds daily per hundred birds. In addition it is a good plan to add twenty pounds of corn meal to every 100 pounds of the laying mash during the spring months. If the birds need still more fattening food one can feed a moist mash daily consisting of equal parts of corn meal, rolled oats and semi-solid buttermilk. This should be fed at the rate of three pounds per hundred birds daily. After the middle of June the extra feeding precautions may be given up and a straight ration fed. The grain can also be reduced to ten pounds per hundred birds daily. Maintaining of weight is important. Aim to do it.—C. S. Platt.

Small Incubators

IN SELECTING the small incubator there are two types to consider and both have advantages. I have operated both kinds and find that the hot water machines are easy to keep at the required temperature and will not change very rapidly. If the lamp does go out and the water becomes cool it takes longer to bring them back to 103 degrees.

The hot air machines have no water system to leak and this is an important factor if you buy a second-hand incubator. Some of the joints in hot water machines have a tendency to rust out and they are often located in difficult positions for making repairs. If you buy a second-hand machine at a farm auction, always examine the water pipes and if possible fill them with water and look for leaks.

Rules for Each Machine

Every incubator has its own set of rules in regard to ventilation and general management. Often old machines are sold at farm auctions without the instruction book. Buyers of such machines should obtain the book even if they have to write to the manufacturers and buy one. The owner of the machine needs the book and it is to the interest of the manufacturers to have their incubators give good results. The buyer of a second-hand incubator one year may be in the market for a new one of a larger size the following year. He will be apt to buy the type of machine that he already understands if it has given good results.

Incubators with a metal jacket around the lamp are fireproof or as nearly fireproof as it is possible to make them. It pays to use an incubator of that type and avoid any unnecessary risk.—R. G. Kirby.

The External Parasites

PARASITES of the domestic fowl cause a heavy annual loss to poultrymen by weakening the vitality of their birds, which not only lessens production, but renders them liable to the inroads of disease. Fortunately, most parasites are rather easily eradicated or controlled, and it is the purpose of this article to outline methods used by practical poultrymen in the war against these pests. Fowl parasites may be divided into two classes, external parasites and internal parasites.

Habits of Lice and Mites

External parasites include the lice and mites. Lice stay on the birds all the time, while with some exceptions mites hide in cracks and crevices of the building during the day, and crawl on the birds at night, sucking their blood. Farmers often do not know this. I have often heard well meaning people say: "Well, the hen house was so lousy that I don't see how the hens stood it. I've just cleaned it out and given it a good whitewashing. Put carbolic in the mixture, too. I guess that will end the lice for a while."

The truth is that such methods, while they will control the red mite, only do half the job. All the spraying and whitewashing in the world will not rid the hens of body lice, because they stay on the hens all the time. Treatment of each individual is the only method of control. The use of old fashioned lice powders, which depend upon smothering the parasite, has been superseded by sodium fluoride, which is a stomach poison. This material not only kills the adult lice, but clings to the feathers and poisons the young lice as they emerge from the eggs.

Sodium fluoride, in the form of a fine white powder, costs from twenty-five to fifty cents a pound, depending upon which drug store you buy it from. A pound will dust about 100 birds. It is used as follows. The bird is held by the feet, and a small pinch of the material applied to each of the following places: around the vent, between the legs, under the wings, and around the neck. The powder should be rubbed into the feathers with the fingers. One person can dust a lot of birds in a short time by this method, which is a clean-up as far as lice are concerned.

May Require Milder Treatment

Sodium fluoride, being a poison, cannot be used on hens with baby chicks. Tobacco dust or some other mild treatment will have to do. I always dust the pullets as they are housed, and treat the old stock at the same time. Lice are scarce here but it pays to keep ahead of them. Whenever stock is to be handled, it is a good idea to dust as the birds are caught up, as an added precaution. Any new stock that is added to the flock should always be dusted before it is introduced.

One great advantage of artificial incubation and brooding is that if the quarters are kept clean as they should be, and the young stock is kept away from older birds, they need never know lice at all. It is said that every dog ought to have a few fleas to keep him from worrying about his troubles, but that principle doesn't hold true with chickens and lice.

The second major external parasite is the red mite, which is responsible for the so-called "lousy" hen house. This minute pest lives in cracks and crevices about the nests, roosts and dropping boards, and crawls on the hens at night to suck their blood.

The torture that hens must suffer on hot summer nights in the old fashioned, filthy, infested hen house is beyond imagination. Fortunately the red mite, which takes its name from its appearance when filled with blood, is easy to control. To begin with, all lumber used in the hen house should be smooth and tight fitting, roosts especially so. The standard roost is a 2x3, planed, rounded slightly on the top, and removable. Next the interior of the house should be kept whitewashed, not only for appearance and sanitation, but to fill up crevices in which the mites could hide. Here is a recipe for the famous Government Lighthouse Whitewash.

Lighthouse Whitewash

Mix a thin paste of 50 lbs. of hydrated lime in boiling water, or slake ½ bushel of quicklime in 7½ gallons of water, keeping the vessel well covered and stirring occasionally. Add 1 peck of common salt dissolved in hot water, 3 pounds of rice flour boiled to a thin paste and stirred in while hot, ½ lb. of Spanish whiting and 1 pound of clear glue thoroly dissolved in boiling water. Mix well in the order given and let stand for several days before using. Apply as hot as possible with a brush or spray.

Third, paint the roosts with some oily compound. There is nothing better than the spent oil from the crank case of the poultryman's automobile, thinned with kerosene, and brushed well into all joints and cracks about the roosts.

Other mites of minor importance are the depluming mite, which causes the feathers to drop from the head and neck of infested birds; and the scaly leg mite, which is responsible for the roughened scaly appearance of the feet and legs.

The depluming mite can be controlled by greasing the affected parts with carbolated vaseline. The scaly leg mite is killed by soaking the feet and legs of infested birds in warm, soapy water, removing loosened scales, and anointing with carbolated vaseline for several days. —R. L. Scharring-Hausen.

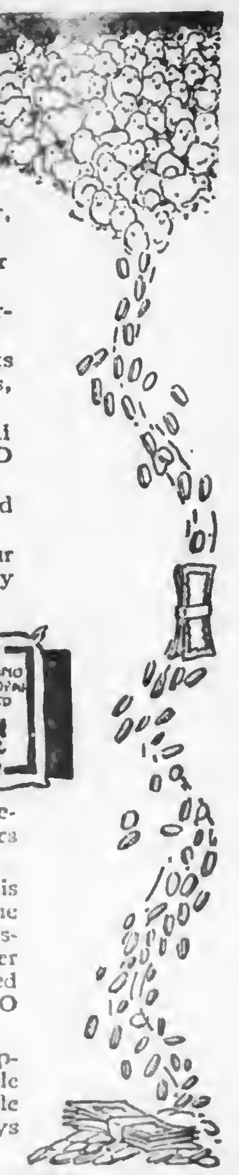
THOUSANDS TURN PRACTICALLY EVERY CHICK INTO MONEY $



You can too, but if you failed to make a profit last year, remember:

On every chick that died you lost all the feed it had ever eaten.

That every runty light-weight cockerel, or late maturing, irregular laying hen still owes you for feed.

That for every *extra day* it took to develop your chicks into heavy market-size cockerels, or profitable laying hens, you *lost* a day's feed for the *whole* flock.

Perhaps some of these losses could have been avoided by better housing, and better care. But BETTER FEED is the BIG SECRET OF SUCCESS.

Perfect feed builds hardy bodies, resistant to bad housing, improper care, disease.

You can avoid mishaps, and delays that lower your profit during the 6 weeks to 6 months growing period by feeding:

DOMINO GROWING MASH WITH DOMINO DEVELOPING FEED

These two great chick rations are the result of improvements made by extended scientific experiments and years of practical feeding tests in thousands of chicken yards.

Every mineral, protein, and other ingredients is present in proper proportion to supply all the needs of the growing chick. Every demand of the chick's system is satisfied. Hardy bodies are developed, resistant to improper housing, imperfect care, and diseases. DOMINO fed chicks require no culling. LOSSES ARE CUT TO PRACTICALLY NOTHING.

DOMINO FEEDS are scientifically processed, and properly balanced to promote rapid growth of bone, muscle and feathers. The rapid development of big marketable cockerels, or profitable laying hens is certain. Many days of feed are saved. See our Local Dealer.

Coupon Brings Valuable Booklet—Free

Figure what it would mean to be able to raise practically every chick quickly to healthy maturity with less care, less trouble, less feed. Of course you are interested in more information on how this may be done. Send for booklet which contains valuable directions—"Increase The Live Weight. Reduce The Death Rate." If Cows Could Talk

"Milk me with a DeLaval"

They would Say

IT IS a fact proved by thousands of De Laval Milkers in use on more than half a million cows, that the cows like it better than any other method of milking.

In a recent questionnaire received from 1160 De Laval Milker users in 47 states, this question was asked: "How does it agree with your cows?"

98.52% answered this question favorably.
353 said "Fine."
204 " "All right."
143 " "Good."
132 " "Better than hand milking."
All the rest—except 13 out of 1160—gave favorable answers.

The De Laval pleases the cows because it milks them with the same uniform, gentle and soothing but stimulating action day after day and year after year, without variation. Cows almost invariably produce more milk when milked the De Laval Way than with any other method, and owners say they have less udder and teat trouble with a De Laval. And of course the De Laval saves a great deal of time and is easy to keep in a clean and sanitary condition.

Make Your Cows Pay Bigger Profits

H. C. McKinney
PRESIDENT

If you have six or more cows and are milking by hand—the Empire Milking Machine will save you money. It helps do away with the hired man and puts his wages of $60 to $80 a month and what it costs to feed him right in your own pocket.

But that isn't all. The Empire Milker produces milk with a lower bacterial count—cleaner milk. In many cases it increases the lactation period of the cows. It's a simple thing to handle, too. A 10-year-old boy can operate it.

Write today for my booklet "How to Milk for Bigger Profits" and let me explain the New Deferred Payment Plan that lets the Empire pay for itself while saving money for you.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Plans for Annual Penn State Dairy Exposition

THE annual Penn State Dairy Exposition which will be held at State College May 1 is a unique event, the entire responsibility for its success being carried by the dairy students. Scores of beautiful cows, specially fitted for the occasion by the students who devote much of their spare time for several weeks to the project, are on exhibition. The skilful handling of these cows in the show ring is one of the features of the exhibition which brings out the showmanship abilities of the contestants.

A dairy cattle judging contest, a dairy products judging contest, and a clean milk production contest are other interesting features of considerable educational value. The success of the annual Penn State Dairy Exposition is a real tribute to the enthusiasm, the industry, and the capability of the Penn State Dairy students.

A Most Important Industry

Dairying is the industry most closely associated with human welfare. Approximately 1,800,000 babies under one year of age in the United States must depend on cow's milk for food, either wholly or in part. The more recent discoveries in nutrition show that milk contains an abundance of the vitamins essential to the growth and well-being of children and also of much importance in the diet of adults.

It is no idle assertion that "Prosperity follows the dairy cow." The annual farm value of dairy products in the United States exceeds two and one-half billion dollars; a sum of money greater than the combined value of all the gold, silver, copper, iron, lead, zinc, granite, marble, and limestone annually produced in the United States. The production of milk in this country exceeds 114,266,000,000 pounds annually. If this milk were placed in quart bottles which were stood up side by side, it would make a line of bottles that would go around the world 125.8 times.

Pennsylvania is the third state in the Union for the farm value of its dairy products, which total approximately $100,000,000 annually. Pennsylvania is also the second greatest milk consuming state in the nation and the first state in the Union in the production of ice cream; with a production in 1924 of 30,755,000 gallons. More dairy products, however, are consumed in the state than are produced.

Penn State offers unusually good opportunities for the study of dairying. A herd of 150 choice animals of the five major dairy breeds are available for instructional purposes. These are housed in one of the best college dairy barns in the United States. Many of the animals are prize winners at state and national shows and several are state champions in milk and butterfat production in their age classes. Certified milk has been produced regularly in the college dairy barns for six years and not a single reacting animal to the tuberculin test has been found during the past eight years.

The dairy manufacturing work is housed in a modern twenty-five-room, fire-proof building. The college creamery is in operation daily thruout the year. Milk and cream are furnished by about 300 farmers living in the community. This abundance of raw material gives excellent opportunities for instructional work.

Everyone interested in dairying in Pennsylvania is invited to visit State College on May 1 and see what the dairy students are doing. This will be "Dad's Day" at the institution and all the dads in the Commonwealth are especially urged to be present. A number of interesting athletic events will take place in the afternoon and there will be a big dairy banquet in the evening.—A. A. Borland.

Prevention of Calf Scours

CALF scours are so often fatal when the best of treatment is available that prevention of the trouble should always be considered first by the dairyman.

A. Sanitation at Birth

1. Calf should be born in a clean maternity stall.
2. Immediately after birth hold navel in tincture of iodine at least two minutes. Do not tie navel.
3. Give calf first milk of dam for at least three feedings.
4. Feed pails should be washed and also udder and teats of dam before allowing calf to suck.
5. Place calf in a clean, dry, warm pen which has been cleaned and disinfected.

B. After Care of Calf

1. Calves should be kept separated if possible.
2. Feed pails should be washed and scalded at least once a day—better after each feeding.
3. Feed at regular time night and morning.
4. Feed a regular amount.
5. The temperature of the milk should not vary.
6. Avoid any radical change in the feeding of the calf.
7. Do not over feed. Never feed more than calf will readily clean up.
8. Watch calf at each feeding time for symptoms of scours or other disorders.
9. Loss of appetite and signs of weakness are symptoms which often appear before the diarrhea begins.

Treatment

A. Protect Other Calves

1. Isolate the sick calves in some other part of barn as soon as discovered.
2. A thoro cleaning and disinfection of the calf pens may avoid further trouble in the remaining calves.

B. Nursing a Sick Calf

1. If calf appears sick at feeding time do not feed it.
2. Give doses of castor oil; one to two tablespoonfuls according to size of calf.
3. If still sick at next feeding time give only part of regular ration. May be advisable to substitute warm water and raw eggs for milk.
4. Keep calf warm. May be necessary to blanket calf.
5. The drugs used will vary with the type of scours the calf is suffering with. If in doubt, consult a veterinarian.

It should always be kept in mind that calf scours is a disease of calves which may be largely prevented by careful feeding and cleanliness.—H. J. Metzger.

Comparative Value

What are germ middlings twenty-five per cent protein? How do they compare with other middlings in feeding value for cows?—L. H., Cambria County, Pa.

Since ordinary wheat middlings contain only slightly over seventeen per cent of protein as a rule, the germ middlings of which you speak should be considerably above ordinary standard wheat middlings or flour wheat middlings in feeding value.

It is likely that they are also considerably higher in fat content than ordinary wheat middlings, since the germs of most seeds are high in fat content. You could, therefore, afford to pay a somewhat higher price for them than for standard wheat middlings.—A. A. B.

Association Cows Tested

THE Pennsylvania State College dairy extension service announces that during January thirty-five Pennsylvania associations tested 13,035 cows. Coventry association of Chester County led with 572 cows tested. Central Pennsylvania Guernsey Breeders' Association was second with 567, and the Warren-Elk group third with 555 cows.

The Carbon-Lehigh association had 100 of the 1864 cows producing 40 or more pounds of butterfat. The West Chester association in Chester County ranked second, having 94 of the 40-pound cows. Allegheny was third with 86.

The 1000-Pound Milkers

In number of 1000-pound milkers, the Carbon-Lehigh and West Chester associations were tied for the leading position with 147 each. The Washington association had 103 and the Allegheny group 102 of the heavy milkers.

Of the 40-pound group of butterfat producers 645 did better than 50 pounds, and 1222 of the 1000-pound milkers passed the 1200-pound mark. Dairymen members of the association continued to weed out the boarders that never pay their board, selling 120 unprofitable cows. Eleven bulls were purchased. Cows having warm barns and warm watering places were not affected by the changeable weather of the month, testers' reports show, but continued their normal flow of milk. Many members observed this, so they installed watering cups and repaired their barns.

Butter Is Butter

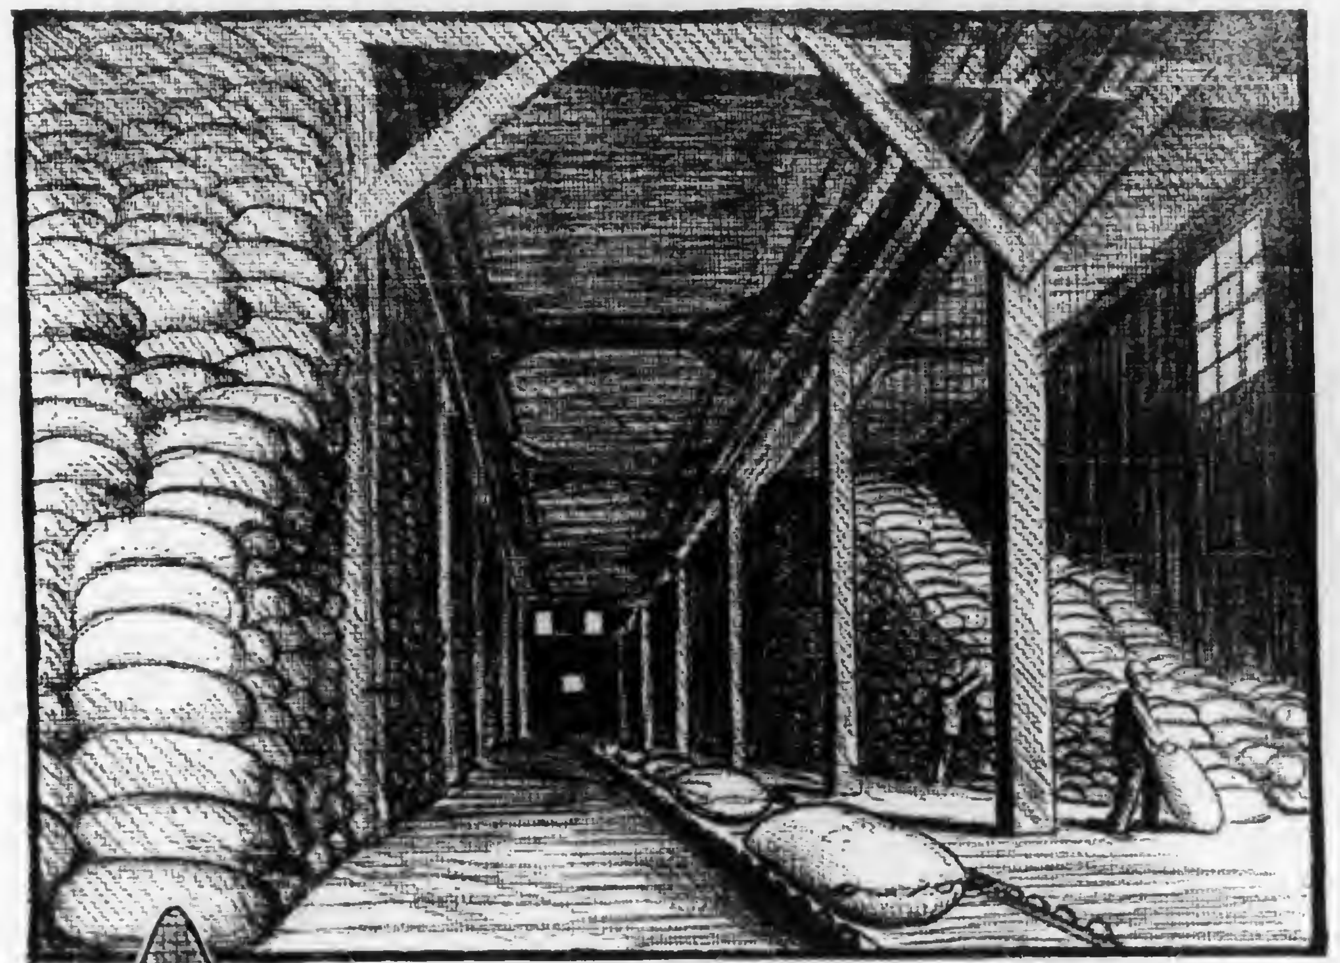
THERE is no such thing as a low grade and a high grade butter under the law. It is either legal butter or illegal butter, states Dr. James W. Kellogg, director, Bureau of Foods and Chemistry, State Department of Agriculture, and our field agents are instructed to rigidly enforce the legal requirements.

The law says butter is not butter when it contains more than sixteen per cent of water or less than eighty per cent butterfat.

Lawn Grass Mixture

HIGH grade Kentucky bluegrass seed and good redtop seed mixed at the rate of two to five parts of bluegrass to one part of redtop, is suggested by the Geneva Experiment Station as a really desirable, general-purpose, lawn grass mixture. If a little clover is wanted in the lawn, a small amount, about one-sixteenth part, of white or Dutch clover may be added to the mixture.

This mixture should be sown in the early spring, seeding at the rate of one ounce per square yard for new lawns or one-half ounce per square yard for old lawns. The seed should be raked in lightly.



AMCO

This Service puts sound theory into practice

A COLLEGE FEED CONFERENCE BOARD formula is a recipe for a good feed. But before a feeder can benefit, some agency must select and assemble the ingredients, mix them, and deliver the finished product. This is what AMCO FEED MIXING SERVICE does.

College Feed Conference Board formulas call for feeds of *standard quality*. Amco Feed Mixing Service selects only such feeds. The formulas specify a large number of ingredients to provide variety of protein. Amco Feed Mixing Service, with its world-wide connections and ample storage facilities, can purchase and handle any number of feeds in any amount.

Finally, to be of practical value to feeders, College Feed Conference Board feeds must be economically priced.

Amco Feed Mixing Service guarantees prices which are never above the market when made, and which are as much lower as direct contracts with consumers, volume plant operation, and enormous purchasing power can make them.

SWINE PRODUCTION

Importance of Sanitation Is Proved by Work of Several Illinois Farmers

ONE of the most striking illustrations of the importance of the use of sanitary precautions in swine growing is the work that was done by a large number of farmers in the state of Illinois in 1925 while cooperating with the college of agriculture in studying swine management. This report shows that 608 farmers who followed a simple method of sanitation were able to save ninety-eight per cent of the pigs that were farrowed. They reported practically no runts among these pigs as they all seemed to develop without a set back of any kind.

A comparison was made of growing pigs under clean surroundings and the so-called "old way." It was found that the pigs produced on the clean pastures could be marketed at from six to seven weeks sooner than the pigs that were not properly handled. It was found further that the cost of growing a hog to a weight of 200 pounds was about $2.50 less when kept under clean surroundings compared with the so-called careless method.

The McLean County System

The sanitary precautions followed were those taken in what is known as the McLean County System. This system is based upon the investigations and demonstrations of some of the scientific staff of the Bureau of Animal Industry and carried on in McLean County, Illinois, hence the name.

To carry out the plan followed requires some additional labor and expense but the increased number of pigs saved and developed will more than pay for the additional cost.

In brief, the general plan is about as follows. Clean thoroly the farrowing quarters, scrubbing the floor and side walls of the farrowing house with a solution made from thirty gallons of boiling water and one pound of lye. As soon as this is completed the same area is sprayed with a solution that is made up of one pint of compound creosol solution to four gallons of water. This treatment is simple and assures clean quarters for the new-born pigs.

In addition to cleaning the pens clean bedding should be provided and the farrowing pens must be properly fitted out with guard rails from six to eight inches from the floor.

Before the sows are put in the clean farrowing pens the sides of the body and the udder should be thoroly washed with soap and water. This treatment will give assurance that the sow is clean and that there are no worm eggs on the body when she is placed in the treated pen.

Clean Ground for Young Pigs

After the pigs have been farrowed they are hauled with a wagon to a clean pasture where no hogs have been kept for a year. The young pigs are not allowed to run out in the barnyard or any place that may be infested before they are put on this clean ground. Other hogs in the herd should not be allowed to get on this clean pasture and the young pigs should not be permitted to get back to the barnyard. The pigs are kept on this clean pasture up to the time they weigh about 100 pounds or around four months of age. After they reach this weight and age there is, usually, very little difficulty from worm infestation.

To some swine growers this system may seem like a great deal of extra work and too exacting a method of management. People who have practiced this method of sanitary control have not found it difficult and have come to regard the advantages much greater than any disadvantages in connection with the system.

The advantages might be enumerated as follows. In the first place it is possible to produce the regular supply of pigs with approximately two-thirds the number of brood sows, thus materially reducing the cost of brood sow maintenance. A much greater per cent of pigs farrowed are raised to maturity. The entire pig crop develops more uniformly and results in a better lot for feeding, and marketing to better advantage because a higher price is usually paid for a load of pigs of uniform weight. The pigs can be sold at from four to six weeks earlier, thus, as a rule, getting them on a higher market than prevails when the normal run of hogs is received on the market.—W. H. Tomhave.

Ton Gelding Club

EACH one of the thirteen members of the Jefferson County Ton Gelding Club is pushing his colt toward the ultimate goal, a horse weighing a ton at five years of age.

Billie Beeman, Corsica, has a black Percheron filly which already weighs 1800 pounds. This colt is sired by Jerome, grand champion of the 1924 International in Chicago. Alva and Paul Love, Summerville, have a pair of red roan Belgians that will top 3200 pounds. One of these is a half-brother of the grand champion at the 1924 Ohio State Fair.

Another set of brothers, Herbert and Russell McGaughey, have two Belgians which at two and one-half years of age weigh 3400 pounds.

Gladys and Blair Shields, brother and sister near Baxter, are caring for a pair of Belgians which already have passed the 3200-pound mark. Among the other members of the club are Dwight Bartlett, William, Bertha, and Perry McGarey, and Howard and Kenneth Fox, all living near Brookville.

Horse Price Trend

(Continued from page 2)

and even the latter number was below a replacement basis. Since horse prices have not improved enough to stimulate production, the number of colts produced this spring and next will not be much, if any, larger than in the past two or three years. This means that horses old enough to be in harness will decrease each year up to 1930 at least. That decrease probably will amount to 600,000 to 800,000 head a year.

Increased use of mechanical power will offset part of this reduction in the horse population, but with the surplus of horses eliminated, substantial improvement in horse prices seems bound to occur.

On the farms of the 30,000 crop reporters of the United States Department of Agriculture, there were only forty-one colts per 1000 horses and mules on January 1, 1926, compared with ninety-one colts per 1000 in 1920.

Fewer Stallions Now

The number of stallions enrolled in five leading states in the Middle West for which records are available has declined sharply in the last ten years. Purebred stallions enrolled in 1925 were only forty-one per cent of the number in 1913, and grade stallions had decreased eighty-nine per cent. This means that increased horse production will be at a moderate pace.

The mule population has increased each year since 1920. However, the number of young mules is now below a replacement basis, so that a decreasing mule population seems probable until production is speeded up again. Mules have gained steadily on the horse population for the last three-quarters of a century. At present, there are less than three horses per mule on farms compared with nearly eight horses for each mule in 1850.

The new low price of the Sedan is $895, f. o. b. Detroit. The Special Sedan is $945, f. o. b. Detroit

Strength and Safety

Dodge Brothers Motor Cars are built to protect passengers.

That is why Dodge Brothers pioneered in introducing the all steel body, and why they have continued to pioneer by recently improving and perfecting it.

Like the all steel sleeping car—now insisted upon by public opinion—Dodge Brothers all steel bodies are fireproof and as near shock-proof as motor car bodies can be built—an armor of protection in emergencies.

Electrically welded and staunchly braced and reinforced at all points of strain, they are noiseless and built to endure permanently.

They also provide unparalleled vision. The menace of thick corner pillars—blocking the driver's vision at street intersections—is eliminated. Slim, steel pillars take their place.

One-piece windshields and exceptional window areas further increase driving vision and safety.

And while safety cannot be measured in dollars, it is gratifying to know that these improved steel bodies exact no penalty from the purchaser.

With production vastly increased, these and many other vital improvements were announced coincidently with the most attractive schedule of low prices in Dodge Brothers history.

Maryland Mother Asks Advice

And Receives Four Answers from Four States

DEAR EDITOR:—Our Home Pages are such a great help to me that I am now asking more advice from you and others.

I live on a rented farm and am poor. I am the mother of five children under eight years of age. I do my own work, washing, ironing, mending, cooking, baking and milk four cows, and make butter.

Last summer the two boys, aged eight and seven, washed and dried the breakfast and supper dishes, while I did the chores, attending the cows and little chicks. I want to ask the Home Page readers how old my girls should be before I let them do the dishes. They are five and one-half and three and one-half years old, and are both anxious to help mother, but I do not want to have them work too young.

Are the Boys Too Young.

The boys are in school, and walk one-half mile each way. They carry in the wood each evening, and on wash-day help me with all the morning chores. Am I asking too much of them? I should like to hear from Mrs. Kern, Mrs. Anderson and Mrs. Mumaw on this subject.—A Maryland Farmer's Wife.

This request makes me recall my own childhood days, for we were five children, and at the age of eight I became dishwasher. I also cared for two younger sisters.

My own girls and boys began washing dishes at that age, and my daughter's six-year-old boy and ten-year-old girl not only wash dishes, but bring in the wood, assist in putting the house in good order. They take great pride in keeping their bedrooms in spic and span condition. The little girl can bake a cake, prepare a simple meal, and sew straight seams on the sewing machine.

By all means teach the little folks to help with light duties indoors and out. They want to help mother make the home clean and nice for daddy. Always be sure to praise their worthwhile efforts.—Mrs. E. A. Kern, Pa.

* * *

When daughter was five years old, my mother was invalided in our home, and I often called on the child for many things not usually expected of a girl so young. Previously she had done very little beyond wiping dishes, picking up her toys, and running little errands to save me steps, such as carrying wood, etc. However, she always wanted to help mother and the results often surprised me.

Best Bread Ever!

One day just as I was starting a batch of brown bread and had the materials and recipe assembled on my work table, I was called to the sick room. To my great annoyance, I found on my return that my child had the bread all ready to put in the cans for steaming. I feared it was spoiled but she was so sure she had put everything in all right that I risked cooking her mixture, and we never had nicer brown bread.

Some little six-year-old girls do dishes very nicely—better than other girls at ten or even twelve. I think much depends upon the child, her aptitude, and her health. It will not hurt sturdy, robust girls at all to do dishes twice a day when they are four and six years old. Their accidents might prove expensive, tho.

I believe my daughter does less now at thirteen than she did at six or seven. She is very busy carrying six full-year subjects in the second year of high school. If I am sick, she does everything, and cares for me besides.—Mrs. Anderson, N. Y.

* * *

I was only one of eight rollicking youngsters on a big Ohio farm, and I cannot remember a time when I did not rock the baby, wash dishes, gather vegetables, pick berries, haul wood with a pet lamb hitched to the family express, water the flower beds, scrub the porches, gather in the nightly kindling, carry water jugs to the farm men, watch the cows along the road, keep water in all the chicken pans, hunt the eggs, milk cows (at the happy age of seven) and scatter grain for the hungry hens. I know you are wondering what the other seven did. Well, we were a great happy family to work together, and much of our daily work was mostly glee. Races were always in order. The dust cloths were gayest colors, and I remember my childish delight in digging plantain and dandelion each spring at ten cents a hundred. We all grew up to maturity, and seven of us are today living healthy lives of happy usefulness.—Mrs. Stewart, N. J.

* * *

For the good of the child he must learn how to work and to enjoy work as soon as he is able to walk around the house.

A child that is old enough to play with playthings is old enough to pick them up—if you call that work.

Montessorri in her Montessorri Method shows how a child of three or four years enjoys setting the table and carrying dishes out.

Patri, the teacher and student of child life, insists that if a child is to be happy and develop properly he must have routine tasks to do.

In this particular case would it not be better for mother to work with the children, rather than having the children of seven and eight go at a pile of dishes alone?

We Have System

In our home I begin to wash dishes as soon as we get up from the table. The children, seven and twelve, attend to the dining-room, and put the dishes away when they are drained. We have our method systematized so it takes but fifteen minutes or so to do the dishes.

I certainly believe that children should do routine tasks very young—but the method should be right. Make play of work and then the youngsters will enjoy work as much as play.—Mrs. Mumaw, Ohio.

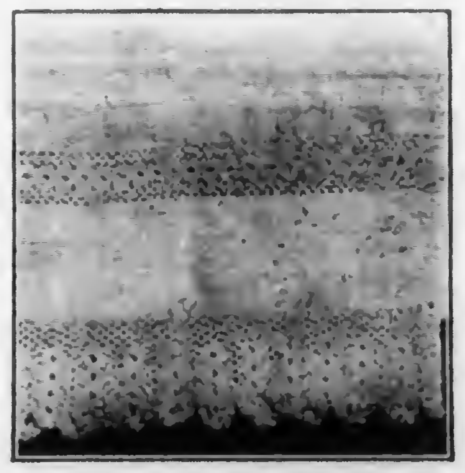
Be Glad

OH, THE glad joyous feeling that envelops one these wonderful spring days! One is thrilled with the wonder of it all. It is wonderful to see the new life manifested in everything, in trees, plants, animals and poultry. We can be oh so happy on the farm! Where is the monotony, with new things every day, always something different. The factory and office cannot compete with the farm for change and life. When we are well, strong and able to work, we can well be "Glad! Glad! Glad!"—Arabelle M. Smith, Pa.

DRESS shields should be soaked in cold water at least two hours before they are put in warm suds. Perspiration stains cannot be removed if they are plunged at first into warm water. Never use hot water in washing shields.—Mrs. Lalia M. Thornton, N. Y.

Swedish Crochet Pattern

WE HAVE enthusiasts for both white and color for the bedrooms and for those who prefer white there is a demand for new patterns in crochet. One of the most interesting patterns we will find is the one illustrated, in Swedish crochet. It is a very rare pattern brought to this country from Sweden many years ago and not commonly known.



This lace can be used for pillow cases

It looks like a difficult pattern but is really quite simple and very attractive, as well as fascinating to make. A striking bed set made with the insertion in the sheet, and the edge and insertion on the pillow cases, is well worth the effort.

LACE.—Ch 30 and fasten in tenth ch from hook with picot, ch 5, p, fasten. Repeat until 3 open meshes are made, turn with ch of 5, fasten in 3rd ch of 1st row, picot each time thread is fastened. Repeat for six rows then ch 8 and fasten back in 1st stitch in ch of 8. This makes loop for 1st wheel, dc 2 picot; repeat 4 times.

Half of First Wheel Completed

You now have half of the first wheel, ch 8 to make loop for second wheel—repeat until half of four wheels are made. Dc 2, p, dc 2, for turn of 4th wheel and continue around as on first half of wheels. Fasten in side of open mesh, ch 5, fasten between picots in wheel. Repeat around four wheels. Ch 3 and picot in alternating sides to fourth wheel. Continue across wheels. After each group of wheels which forms the scallop is finished, crochet six rows at beginning before starting loops for wheels of next scallop.

INSERTION.—Follow direction for wheels in lace. One side is finished before the other side is started. After all wheels are made for the required length, the loops and picots are crocheted. Insertion may be made any desired width by making one, two or three rows of loops.

Use No. 80 or 90 thread.—Carlie Sexton, Ill.

From the Book Nook

NOT long ago one of our readers to whom a library book had been loaned, wrote us a very interesting letter. It reads something like this:

"Dear Editor: You will find enclosed a check to pay for the book you sent me on Tuesday. I simply cannot get along without it any more, and so I am buying it from you. Thank you." ——— ———.

There was nothing for us to do but accept the check, and buy another book. We are indeed glad to have our books so thoroly appreciated, yet we hope this will not happen again. Our waiting lists are long, and it is not fair for you to lengthen the time of wait for other readers. If you wish to purchase any of the books, write us, sending the listed price of the volume you wish. There is an added advantage in this method for you will be sent a brand new book, and new books have charms.

Using Canned Tomatoes

TOMATO SOUP

1 cup tomatoes put thru potato ricer
2 cups water

Let come to a boil, then add ½ teaspoon soda. Boil six minutes longer then add:

½ teaspoon salt
Dash of pepper
1 tablespoon butter
1 cup rich milk
Serve hot.

TOMATO GRIDDLE CAKES

2 cups tomatoes
3 rounding tablespoons sugar
1 teaspoon salt
1 well-beaten egg
1 cup flour
1 rounded teaspoon baking powder.

Mix in order given, and bake on oiled griddle.—E. May Willis, Md.

Prize Winning Hints

I USE a revolving piano stool when I am sewing at the machine. With the seat adjusted to the correct height I can sew with less fatigue. In one simple move, I swing 'round to the cutting table, and save time and energy.

Using pins is a big saving of time, too. One can do away with basting. I have made many a garment with set in sleeves, collar and all without a stitch of basting. I take the pins out as I stitch, and there is no tiresome pulling of threads when the garment is done.—Mrs. Leo E. Bouse, Pa.

What a Man Thinks About It

Farm Women Should Have Modern Equipment

THE man needs the modern equipment to run his farm and make a living for his family, but the woman needs equipment to make a home which is the most important thing in American life and she cannot devote as much time to home making as she ought if she does not have the proper equipment.

I really didn't know what should come first so I asked my wife which one thing she would like to have if she had her choice. Her answer was "electricity," and I guess she was about right as usual.

Now, to the mind of a mere man, but one who can do and has done housework, I would suggest that the modern farm home should have these improvements,—heat, either steam or hot water, running water at least in the kitchen and a bath room if possible, electricity, whether from a home plant or public utility, a washing machine, if there is no wet wash or the lady does not like them, an electrical iron and a vacuum cleaner. So much for that part of it. A few other things are an electric grill, percolator, toaster and fireless cooker. These can be purchased as you go along.

If You Wish You Can

The first thing you will say is that you cannot afford it but how much did your tractor, your sprayer, or large incubator, silo or litter carrier cost? If you get a mail order catalog and figure up some of the things I have mentioned you will be surprised to see how little they will cost.

Now how to get them! Except for the heating plant, here is my suggestion. Pay some money to the one person on the farm who deserves the most and gets the least. Pay her enough so that there is some over and above the groceries and the meat bill each week and let her buy her own equipment. She will enjoy doing it and she will not have to pay cash for them as practically all of them are sold on time, and you will be surprised and pleased to see how soon you will find improvements in the house as well as on the farm.

In thinking it over I guess I agree with my wife that the need for electricity comes first. What is better than a well lighted room on a long winter evening and then when the pump down cellar starts and I do not have to go down and pump the pressure up before I go to bed, I know it is.—Neal Demarest, N. J.

A Rusty Iron Bed

DEAR EDITOR:—Will you please help me out with this job? I have an iron bed and springs pretty badly rusted from having been left too long in the weather. How can they be put in good shape again? I want to make it brown instead of white, if possible. I have tried sandpaper but some of the white enamel refuses to come off.—Mr. M. K.

With a brush I would carefully go all over the springs, using kerosene. If the rust is not too deep, several applications in the open air will surprise you. Follow each brushing by a good rub, using a cloth in the hands or a dish mop (brand new).

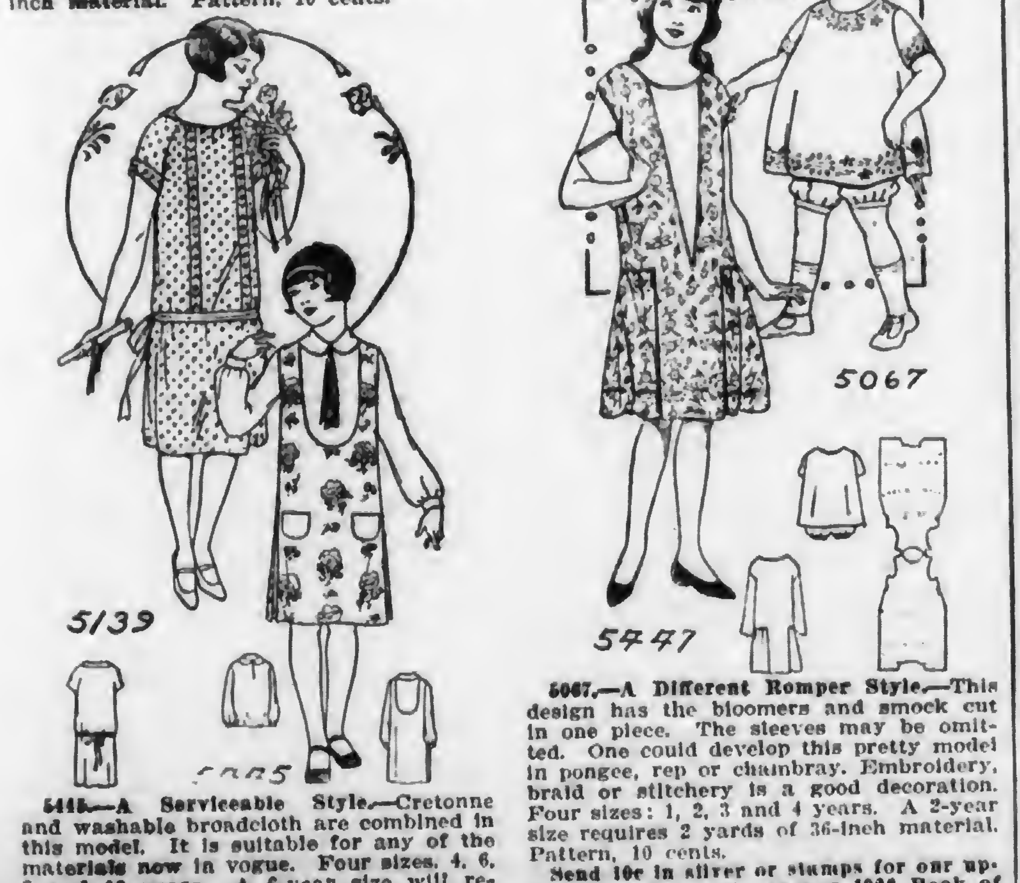
The enamel will yield if you use a strong solution of lye or some good commercial paint remover. Having done this, give the entire surface a good kerosene bath. Steel wool ought to help remove the rust after the oil has had a little time to act.

Any reliable paint concern will supply you with enamel to re-do your bed in imitation walnut or oak, either of which would be brown. There are paints specially made for just such work.—Gertrude S. Stewart, N. J.

Especially for Younger Folks

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5139.—Pretty Frock for Many Occasions.—This model in crepe or voile with lace or embroidery will make a very attractive graduation frock. It is also good for linen or batiste, and the new print fabrics. Four sizes, 6, 8, 10 and 12 years. A ten-year size requires 3 yards of 32-inch material. Pattern, 10 cents.



5445.—A Serviceable Style.—Cretonne and washable broadcloth are combined in this model. It is suitable for any of the materials now in vogue. Four sizes, 4, 6, 8 and 10 years. A 6-year size will require 1¾ yard of 32-inch material for the dress, and 1⅝ yard for the guimpe and the pockets of contrasting material if made as illustrated. Pattern, 10 cents.

5447.—For the Growing Girl.—Printed voile and plain voile are combined in this pleasing model. The dress may be finished with or without the long sleeves. Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2¾ yards of 40-inch figured material and ⅜ yard of plain, cut crosswise, if made as illustrated. If made with long sleeves of figured material 3¼ yards will be required. Pattern, 10 cents.

5067.—A Different Romper Style.—This design has the bloomers and smock cut in one piece. The sleeves may be omitted. One could develop this pretty model in pongee, rep or chambray. Embroidery, braid or stitchery is a good decoration. Four sizes: 1, 2, 3 and 4 years. A 2-year size requires 2 yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

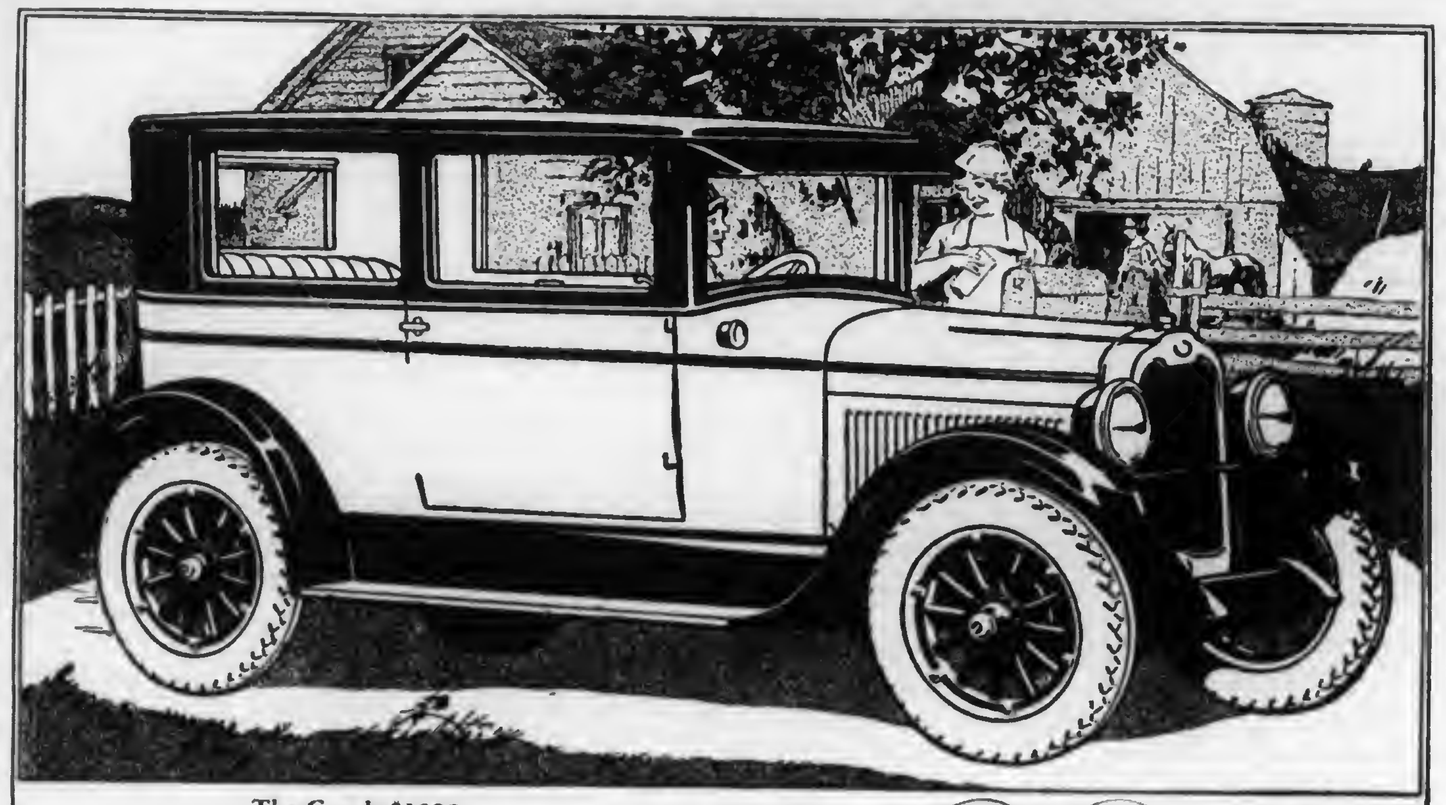
WEST UNITY WOOLEN MILLS,
107 Lynn St., West Unity, Ohio

Swiss Weather Prophet
The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.
This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.
PENNSYLVANIA FARMER 261 South Third Street Philadelphia,



The Coach $1095

Body by Fisher with VV one-piece windshield, automatic windshield cleaner, rear view mirror, dome light, window lifts, extra quality upholstery, transmission lock, four-wheel brakes, balloon tires, air cleaner, full pressure oiling and the Harmonic Balancer.

A. New Oakland Six engine with Harmonic Balancer—uniformly smooth at all speeds.

B. Six-cylinder engine without Harmonic Balancer—not uniformly smooth—having vibration periods.

Readings taken with the crankshaft indicator, a device for measuring torsional vibration.

It would almost seem that this beautiful, capable Oakland Six was expressly designed for country use. Its rugged construction and powerful six-cylinder engine make it absolute master of bad roads and hard work. Advanced engineering features contribute still further to the car's capacity to serve strenuously and live long. Air Cleaner excludes dust and dirt; Oil Filter keeps lubricant clean and pure; Full Pressure Oiling insures a constant flow of oil to all working parts; The Harmonic Balancer prevents vibration and reduces wear. You desire all of these features in your next car—you demand the very utmost in reliability and economy—and only Oakland offers this combination at prices so unexpectedly low.

Cottage Pudding

"OH, goody! Cottage pudding for supper!" Can you remember when you, a hungry child, thus welcomed your favorite dessert? I wonder if, sometimes, your own small folk do not repeat your words, with enthusiastic variations of their own when you give this old standby a place on your table?

It seems to be a universal favorite, whether served in its simplest form, or so elaborately dressed that one scarcely recognizes it as an old friend. It is easily prepared and may be baked a day in advance of the time of serving. Twice the usual quantity may be baked, and served with one sauce today, and another tomorrow. There may be as many varieties of forms and flavorings as one's ingenuity can devise.

Any good recipe for plain cake may be used for the foundation. The following is good, because it's such a time saver, and always turns out right.

1½ cup flour
1 egg
¼ cup shortening
½ cup sweet milk
2½ teaspoonfuls baking powder
½ teaspoon salt
1 scant teaspoon vanilla

Save out one-half cup flour, and add to it the baking powder. Place all other ingredients in mixing bowl (have shortening very soft, and milk slightly warm), and beat all together hard, for two minutes. Add remaining flour, and beat another minute. Pour at once in greaeed and floured pan, and bake in moderate oven.

To Make a Richer Cake

If a richer cake is desired, add one-half cup nut meats to plain foundation. To "kill two birds with one stone," double the recipe, adding one cup nut meats, and bake in good sized loaf tin. The remaining portion, iced with either confectioner's or a brown sugar icing, makes a good nut cake.

LEMON SAUCE

1½ tablespoon butter
1½ tablespoon cornstarch
⅔ cup sugar (more, if liked very sweet)
1 egg
1½ cup boiling water
2 lemons

Mix the first four ingredients, and beat until very creamy. Add the boiling water, and cook until thick, stirring all the time. When thick, remove from stove, and add juice and grated rind of lemons. If the latter are very large and juicy, one may be enough to flavor.

CHOCOLATE SAUCE

Cream together 2 tablespoons butter, ½ cup sugar, 1 tablespoon cornstarch, 1½ tablespoons cocoa. Add slowly, stirring evenly, 1 cup milk. Cook till thickened. Remove from fire, add 1 teaspoonful vanilla. A further decoration of whipped cream makes a delectable addition to this sauce.—Helen Metzger, Pa.

Editor's Note: I am enough of a child to enjoy cottage pudding and the secret of our delight is in the sauce, I am certain. A wholesome idea, too, since that is the best for the child. In following these recipes, let me suggest omitting the salt if you shorten with butter. This pudding makes eight portions. These sauces both work up very thick. I doubled the liquids in both, adding a bit more sugar to each, and had sufficient both times for six hungry boys.

Stamps Please

Editor's Note: When writing us for help or when sending contributions please do not forget to enclose a stamped envelope, on which you have written very plainly, your name and address. Thank you.

Christmas Cactus

PERHAPS my experience will answer some of the questions asked by "S." on the Home Page for March 20th. We have had cactus blooms at Christmas for more than twenty years, and I gladly describe the care we give our plant.

This plant belongs to the desert, and very often is not true to its duty because its needs are not understood. Water is scarce in a desert, so be cautious. It is planted in a flat butter jar without drainage, and watered only when the soil is very dry—usually once a week. Its roots have not been disturbed for twenty years. We feed it three or four times during the summer, giving it manure water from the horse stable at the regular watering period.

Usually we keep it in a south window all summer long, giving it plenty of fresh air. Never carry it to the cellar and do not put it outside, unless you have a place where it gets plenty of sunshine but NO RAIN.

Our plant blossoms freely every Christmas, and for weeks following. At this time we water it a little more. Do be cautious tho, for excess water causes the buds to drop. We cut many fresh blooms for our friends, and always remove the faded blooms. New growth takes place in the spring and early summer.—Claribel Maye, N. Y.

Save Your Hands

I USED to think I couldn't do housework wearing gloves, but I can and I do. Chapped hands and cracked finger ends drove me to it. Now I am happily free from such ailments. Heavy dark cotton gloves, fleece-lined, are best for outdoor chores when feeding the chickens, bringing in wood, emptying ashes, etc. Gloves of grey chamoisette, close-fitting, are fine when sweeping and dusting and shaking rugs. On washday a pair of light ones saves the hands while hanging out the clothes, and again when gathering them in. Keep these in your clothespin bag, and always keep the others in the most convenient place possible.

Housekeepers must wash their hands so often that it is wise to use a mild soap in winter for the toilet and also for dishwashing. Always dry the hands thoroly, and anoint them well with cold cream or mutton suet upon retiring. For spring gardening and pruning shrubbery, Boy Scout gauntlets are advisable. If once you begin wearing gloves you will wonder how you ever got along without them before.—Mrs. E. A. Kern, Pa.

Cleaning the Fireplace

YOU can make those dingy red fireplace tiles look like new if you clean them properly.

First, rub them thoroly with cut lemon.

Next, scrub them, using hot soapsuds and a good brush.

Then, rinse them with clear warm water. Lastly, wipe them perfectly dry, using cotton cloths.—Gertrude S. Stewart, N. J.

The Calla Lily

THE Calla is not an Easter blooming lily, altho it might possibly bloom at that time. After blooming, give it a rest by laying the jar on its side, in a shady spot. About August 1, repot it, disturbing the roots as little as possible, and keep it growing healthily. I do not think cutting the blossoms would prevent its blooming again.—Mrs. J. J. Strickland, Pa.

The New Automatic
DELCO-LIGHT

At the touch of a button~ Starts Runs Stops Automatically

HERE is the new automatic Delco-Light. It is backed by ten years of experience on the part of the pioneers and leaders in the farm electric field. It represents years of research and experiment and test. And now it is ready—the Delco-Light that starts itself, runs itself, stops itself, at the touch of a button.

This new automatic plant completes the Delco-Light line. There are battery plants in several sizes—self-cranking plants without storage batteries—and now the fully automatic plant at a surprisingly low price—a type and size of Delco-Light for every need and every purse.

Write today for full information about the low prices, easy terms and other details of our complete installation offer. Mail the coupon below to the nearest Delco-Light Distributor, or direct to us.

Baby Chicks Grow Fast On
Ryde's Startrite Chick Food With Buttermilk

Nothing is too good for baby chicks at the start. The life of one chick saved pays the difference in cost per cwt. between an ordinary feed and "Startrite" Chick Food. Why take chances?

Ryde's "Startrite" Chick Food is an absolutely safe and complete food on which to start baby chicks. Composed of sound, sweet grains with hulls removed, ground granular, Millet and Rape Seeds which are full of natural vitamines and oil, special Meat Scraps and a liberal quantity of Buttermilk, the lactic acid of which is so beneficial to baby chicks. With ordinary proper care it will raise every normal chick.

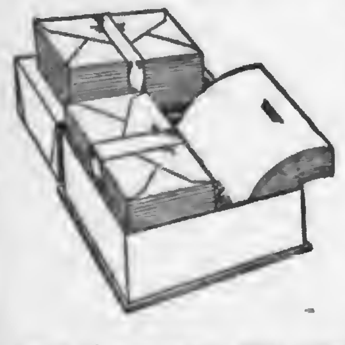
Write on Your Personal Stationery



Printed With Your Name and Address

M. G. CHARLES
261 SO. THIRD ST.
PHILADELPHIA

Sample of Printing, Exact Size

50 Sheets Writing Paper 25 Envelopes to Match

Why not write to your friends on your own personal stationery? It lends style and dignity to your letters. Creates a favorable impression in writing to business houses. Let us send you 50 sheets of stationery and 25 envelopes, made of fine, smooth texture, water-marked Bond in the uniform size, so popular for personal use. Name and address is printed at top of Note Sheets and on flap of Envelopes in rich blue ink with Copper Plate Gothic type and the stationery is packed in an attractive, white covered, hand-made box. You should accept the following liberal offer. You will be greatly pleased with this package of personal stationery.

OUR OFFER Send us only $1.25 and we will extend your subscription to Pennsylvania Farmer for one year and send you by prepaid parcel post this lot of personal stationery with your name and address on letter heads and envelopes just as described. Please write name and address plainly, or print it.

Pennsylvania Farmer, 261 So. 3rd St., Philadelphia, Pa.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I am eating chocolate bon bons and wish all of you could share them with me. Don't you? Will some kind friend send me a recipe for candy?

I am fourteen but am so small that people take me to be twelve. I go swimming in summer, ride horseback, have a bicycle, and go ice skating in winter. Old winter will soon be gone. I like spring and summer much better. As I write some poems I will send you one of them called:

The Two Friends

My dog and I are faithful friends,
We read and play together;
We tramp across the hills and fields
When it is pleasant weather.

And when from school with eager haste
I come along the street,
He hurries on with bounding steps,
My glad return to greet.

Then how he frisks along the road,
And jumps up in my face!
And if I let him steal a kiss
I'm sure it's no disgrace.

Oh, had he but the gift of speech
But for a single day,
How dearly should I love to hear
The funny things he'd say!

And what he knows, and thinks and feels
Is written in his eyes;
My faithful dog cannot deceive,
And never told a lie.

Yet, tho he cannot say a word
As human beings can,
He knows and thinks as much as I,
Or any other man.

Come here, good fellow, while I read
What other dogs can do;
And if I live when you have gone,
I'll write your history, too.

I have a large French poodle that can do tricks, too.—Florence Martin, fourteen (X), Carroll County, Md.

Dear Cousin Ruth:—I live on a farm at Lake Neaucking. In the summer I drive horses on the horse-fork. In the fall I have to go to school. In the summer I have a flower garden. It did not do well last year. I have two pets, a dog and a cat. The dog's name is Skipper and the cat's name is Tom.—Wilma Crandall, Bradford County, Pa.

Dear Forum Friends:—Well, spring will soon be here and all of us will be planting our spring gardens, I know. How many of you have a radio? If you ever have one you will never be without one. A radio is a great invention, I think.

Winter is about gone. It has snowed here this winter some but while the snow is here we certainly make use of it.

There is a small hill in town with a pond at the foot of it. When it snows and the water freezes it is great fun for sleds.

I am sending a picture of my two brothers.—Francis M. Gum, fourteen, Sussex County, Delaware.

MY TWO BROTHERS
Francis M. Gum, Sussex County, Del.

Dear Cousin Ruth and Forum Friends:—In the summertime we go out on the mountain after teaberries, sometimes they are as big as cherries. Did you ever taste them, Cousin Ruth?

I am sending you a picture of our home. I take a lot of pictures with the camera I received as a prize in the snapshot contest and sometime I will send you some more.—Bernadine Guillaume, eleven (X), Lycoming County, Pa.

LOOKING DOWN UPON MY HOME
Bernadine Guillaume, Lycoming County, Pa.

I had your picture enlarged, Bernadine, so Forum friends could better see your home and the surrounding woods and mountains. It's a very good picture. I hope there will be others coming sometime.

Dear Cousin Ruth:—We have a Shepherd dog that can sit up and also stand on his hind legs. He is my pet; his name is Spot.

We have three cows. I milk two of them and my brother the other one. We had eighteen steers but they were trucked to Lancaster on Saturday.

Two mules and two horses and a tractor do the field work. One mule is called Pete. My brother and I have lots of fun with him; he is tame.

The painters are painting the house.—B. Earl Swarr, eleven (X), Lancaster County, Pa.

Dear Cousin Ruth:—I think the page is improving lots. So many girls and boys are joining our little club. Cousin Ruth, I saw there was a girl asked if there was a real Cousin Ruth. I had to laugh when I saw it. Even tho I do not know her I wish she would write me and I would tell her how she could find out if there is a real Cousin Ruth.—Margaret R. Bushey, twelve (X), Adams County, Pa.

Dear Forum Friends and Cousin Ruth:—I go to school every day and have a mile to walk. It takes me as long to walk a mile as it would you other boys and girls three miles for I have been crippled since I was four years old.

It is snowing here this morning. It is about four inches deep. We all like to read Pennsylvania Farmer. There are five of us to read it.—Kenneth Smeltzer, (X), Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—We had a wonderful winter, plenty of snow and coasting. Now as spring has come we are planning to take plenty of hikes to study nature and hear the birds sing. I like to gather flowers in the summer and plan to take music lessons as I did last summer, but am never to busy to read the Forum page. I am sending you a recipe for my favorite candy:

SEA FOAM

3 cups of brown sugar
¼ cup of water

Boil until brittle and add a pint of English walnuts and pour into the beaten whites of two eggs. Drop into greased pans.—Viola McCoy, (X), Indiana County, Pa.

I hope you won't ever be too busy, even in the glorious summer time when there is so much to do out-of-doors, to read the Forum page and send in contributions to it.

Dear Cousin Ruth:—The snow is nearly all off the ground up here, and the girls and boys of our school have already started playing baseball and tag.

Every spring the creek by our schoolhouse is flooded, and we like to watch the big pieces of ice and sometimes branches of trees that are carried along by the current. Sometimes it is within four feet of the bridge.

As soon as I get any photographs clear enough I will send them in.

Here is a list of good books that I have read. Ivanhoe, Robin Hood, Swiss Family Robinson, King Arthur and His Knights, Oliver Twist, Robinson Crusoe, Alice in Wonderland, Alice Thru the Looking Glass, The Last of the Mohicans. Mother is going to get me "Little Woman" and "Child's History of England."—Marion Snyder, eleven (X), Susquehanna County, Pa.

Dear Cousin Ruth and Forum Friends:—When school closes I help my father. I harrow and roll and ride the binder and build hay and grain. We have twelve head of cattle, nine milk cows, three calves. My sister and I do the milking. I have five sisters and one little brother who is only seven months old. We think he is the only one of the family!—Catherine E. Sites, Cumberland County, Pa.

Dear Cousin Ruth and Forum Friends:—In the summer I help bring in hay and dig potatoes. We have lots of apple trees but there are not many apples on them.

I had a little rabbit but it died about two days ago.—Ruth Bostell, eleven, Chester County, Pa.

Now Summer's Coming

WINTER is over. Everywhere the out-of doors is showing signs of spring. Soon you'll be planting gardens, working in the fields, fishing in the streams and enjoying sunshine and flowers. The more you have to do and the more fun you have the more interesting letters you can write our page. Don't get so busy that you can't write as often this summer as you have during the winter just gone. I want to hear from you all the year round, but especially in summer when I can hardly make myself stay indoors, and have to. How I envy you the chance to work and play in the out-of-doors.

Has everyone sent in a picture and story of his favorite pet? You all will need cameras this summer when there'll be so many chances to take pictures for the page. Why not try for one now and start the summer right?

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—This week you are asked to find a word whose letters are contained in certain other words. The expression "my first," "my second," etc., simply means the first letter, the second letter, and so forth, of the longer word you are to form from the letters you pick out. For instance: you would just naturally know that "my third" must be "E," because "E" is the only letter in "MEN" which is not in "MAN." Some of the others are not so easy, but if you will put the letters down that you are sure of, I think you will have no difficulty in finding all the letters needed to spell this well-known word. When you have found the answer, send it to me on a POSTAL CARD so that it reaches me by April 24th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks have been very careless and have been making simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

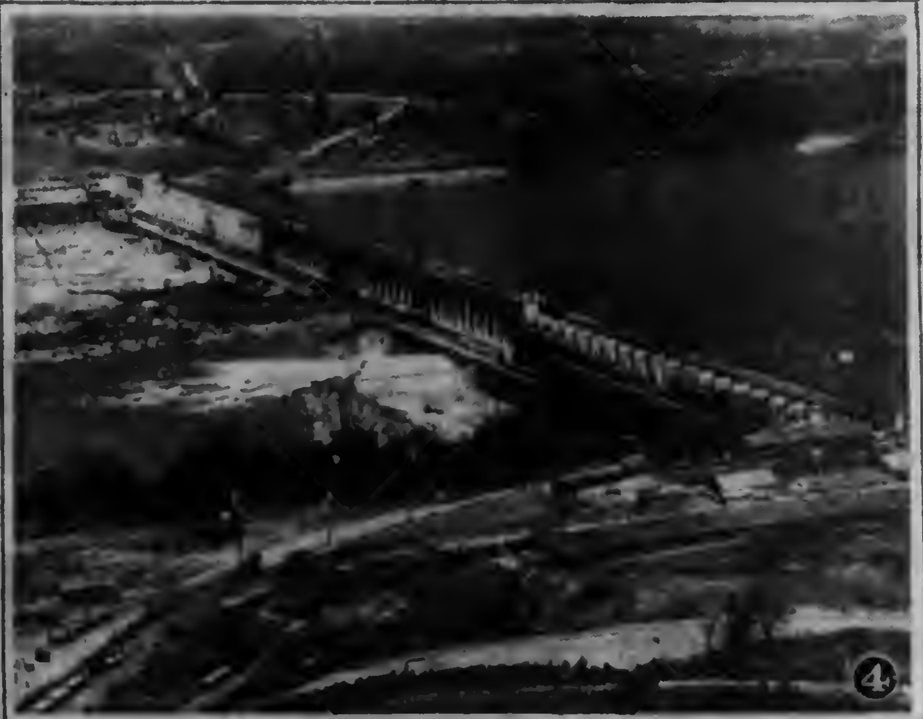
The answer to the puzzle published in the March 27 issue of Pennsylvania Farmer is: CABBAGE, TOMATO, POTATO, PEA, BEAN, CORN, ONION, BEET, CARROT, SQUASH.

The puzzle prize winners are: Laura Ackerman, age 12, Wind Gap, Pa.; Eva Bubb, age 11, Nisbet, Pa.; David Curren, age 6, Gillett, Pa.; Charles E. Danberry, age 9, Ringoes, N. J.; Irene Davis, age 11, Dayton, Ohio; Maurice Kumpel, age 9, Medford, New Jersey; Mary Motter, age 11, Marion, Pa.; Helen Partka, age 8, Renfrew, Pa.; Richard Ruth, age 7, Newburg, Pa.; Silas Bowman, age 8, East Earl, Pa.

Honor Prize Winner: Edith A. Paisley, age 10, Conyngham, Pa.

My first is in GREAT and also in TALL.
My second in MIDGET and also in SMALL.
My third is in MEN but not in MAN.
My fourth is in RACE and also in RAN.
My fifth is in ANGUISH and also in GRIEF.
My sixth is in CAPTAIN and also in CHIEF.
My seventh is in DOLLAR but not in POUND.
My eighth is in NEAT and also in ROUND.
My whole is the name many Little Folks boast
In a broad land that reaches from coast to coast.

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Secretary Mellon saying good-bye to Sir Robert Horne just before sailing for Bermuda with his daughter, Miss Ailsa, and his son, Paul, on March 27th.
2.—Fencing on horseback is one of the latest thrills in Hollywood, California.
3.—A scene from the Ponce de Leon celebration in which over 2000 people re-enact the discovery of Florida and the founding of St. Augustine, the oldest city in the United States, by Don Pedro Menendez in 1513.
4.—An airplane view of the much-discussed Wilson dam and power house at Muscle Shoals, Alabama. A group of eleven southern power companies have submitted a bid for leasing the plant.
5.—The radio slot machine. Drop a nickel in the slot and hear your favorite station.
6.—A group of sailing vessels in the harbor of Miami, Florida.
7.—In this new racing car, Dave Lewis broke the world's record for fifty miles at the rate of 135.78 miles per hour, on March 22nd.
8.—Chief Eugene Little, a typical Sioux Indian, smoking a pipe of peace.

ICE-BOUND HEARTS

By James Oliver Curwood

HOW THE STORY STARTED

AT POINT FULLERTON, 1000 miles north of civilization, Sergeant William MacVeigh concluded his semi-annual report to the commissioner of the Royal Northwest Mounted Police. "I have made every effort to run down Scottie Deane, the murderer. I have not given up hope of finding him, but I believe that he has gone from my terratory. . . ." On his bunk in a corner of the little cabin lay his comrade, Private Pelletier, sick, almost to madness after nine months of loneliness.

Half an hour later MacVeigh set out for Fort Churchill, 450 miles across the ice to deliver the report, get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed reported he'd seen a white man and woman. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. When he found them Scottie lay on a blanket by the fire, wounded. Bucky and his party arrived only a little later. The corporal insulted Isobel; there was a fight and Billy placed the offender under arrest. The party gone, Billy set off, alone for Point Fullerton.

On the day upon which Pelletier believed he was dying Jim Blake appeared with his story of an Eskimo squaw left at an igloo thirty miles up the coast. Pelletier soon discovers the story to be false. Found out, Blake attempts to kill the sick man who is saved by Kazan—the one-eyed sledge dog. Then Pelletier started his search for the deserted white woman.

(Continued from last week)

PELLETIER stopped to rub his eyes and for an hour after that, as he plodded onward, he mumbled things which neither Kazan nor any other living thing could have understood. But whatever delirium found its way into his voice, the fighting spark in his brain remained sane. The igloo and the starving woman whom Blake had abandoned formed the one living picture which he did not for a moment forget.

He must find the igloo, and the igloo was close to the sea. He could not miss it—if he lived long enough to travel thirty miles. It did not occur to him that Blake might have lied—that the igloo was farther than he had said, or perhaps much nearer.

It was two o'clock when he stopped to make tea. He figured that he had traveled at least eighteen miles; the fact was, he had gone little over half that distance. He was not hungry, and ate nothing, but he fed Kazan heartily of meat. The hot tea, strengthened with a little whisky, revived him for the time more than food would have done.

"Twelve miles more at the most," he said to Kazan. "We'll make it. Thank God, we'll make it!"

If his eyes had been better he would have seen and recognized the huge snow-covered rock called the Blind Eskimo, which was just nine miles from the cabin. As it was, he went on, filled with hope. There were sharper pains in his head now, and his legs dragged wearily. Day ended at a little after two, but at this season there was not much change in the light and darkness and Pelletier scarcely noted the difference. At last the picture of the igloo and the dying woman came and went fitfully in his brain. There were dark spaces. The fighting spark was slowly giving way, and at last Pelletier dropped upon the sledge.

"Go on, Kazan!" he cried weakly. "Mush it—go on!"

Kazan tugged, with gaping jaws, and Pelletier's head dropped upon the food-filled pack.

WHAT Kazan heard was a groan. He stopped and looked back, whining softly. For a time he sat on his haunches, sniffing a strange thing which had come to him in the air. Then he went on, straining a little faster at the sledge, and still whining. If Pelletier had been conscious he would have urged him straight ahead. But old Kazan turned away from the sea. Twice in the next ten minutes he stopped and sniffed the air, and each time he changed his course a little. Half an hour later he came to a white mound that rose up out of the level waste of snow, and then he settled himself back on his haunches, lifted his shaggy head to the dark night sky, and for the second time that day he sent forth the weird, wailing death-howl.

It aroused Pelletier. He sat up, rubbed his eyes, staggered to his feet, and saw the mound a dozen paces away. Rest had cleared his brain again. He knew that it was an igloo. He could make out the door, and he caught up his lantern and stumbled toward it. He wasted half a dozen matches before he could make a light. Then he crawled in, with Kazan, still in his traces, close at his heels.

There was a musty, uncomfortable odor in the snow-house. And there was no sound, no movement. The lantern lighted up the small interior, and on the floor Pelletier made out a heap of blankets and a bear skin. There was no life, and instinctively he turned his eyes down to Kazan. The dog's head was stretched out toward the blankets, his ears were alert, his eyes burned fiercely, and a low, whining growl rumbled in his throat.

He looked at the blankets again—moved slowly toward them. He pulled back the bear skin, and found what Blake had told him he would find—a woman. For a moment he stared, and then a low cry broke from his lips as he fell upon his knees. Blake had not lied—for it was an Eskimo woman. She was dead. She had not died of starvation. Blake had killed her!

He rose to his feet again, and looked about him. After all, did that golden hair—that white woman's hair—mean nothing? What was that? He sprang back toward Kazan, his weakened nerves shattered by a sound and a movement from the farthest and darkest spot of the igloo. Kazan tugged at his traces, panting and whining, held back by the sledge wedged in the door. The sound came again—a human, wailing, sobbing cry!

With his lantern in his hand, Pelletier darted across to it. There was another roll of blankets on the floor, and as he looked he saw the bundle move. It took him but an instant to drop beside it, as he had dropped beside the other, and as he drew back the damp and partly frozen covering his heart leaped up and choked him.

THE lantern light fell upon the pale face and golden head of a little child. A pair of big, frightened eyes were staring up at him, and, as he knelt there, powerless to move or speak in the face of this miracle, the eyes closed again, and there came again the wailing, hungry note which Kazan had first heard as they approached the igloo. Pelletier flung back the blanket and caught the child in his arms.

"It's a girl—a little girl!" he almost shouted to Kazan. "Quick, boy—go back—get out!"

He laid the child upon the other blankets, and then thrust back Kazan. He seemed suddenly possessed of the strength of two men as he tore at his own blankets and dumped the contents of the pack upon the snow. "She sent us, boy," he cried, his breath coming in sobbing gasps. "Where's the milk—'n' the stove—"

In ten seconds more he was back in the igloo with a can of condensed cream, a pan, and the alcohol lamp. His fingers trembled so that he had difficulty in lighting the wick, and as he cut open the can with his knife, he saw the child's eyes flutter wide for an instant, and then close again.

"Just a minute—a half minute," he pleaded, pouring the cream into the pan. "Hungry, eh, little one? Hungry? Starving?"

He held the pan down close over the blue flame, and gazed terrified at the white little face near him. Its thinness and quiet frightened him. He thrust his finger into the cream, and found it warm.

"A cup, Kazan! Why didn't I bring a cup?"

He darted out again, and returned with a tin basin. In another moment the child was in his arms, and he forced the first few drops of cream between her lips. Her eyes shot open. Life seemed to spring into her little body, and she drank with a loud noise, one of her tiny hands gripping him by the wrist.

The touch, the sound, the feel of life against him thrilled Pelletier. He gave her half of what the basin contained, and then wrapped her up warmly in his thick service blanket so that all of her was hidden but her face and her tangled golden hair. He held her for a moment close to the lantern. She was looking at him now, wide-eyed and wondering, but not frightened.

"God bless your little soul!" he exclaimed, his amazement growing. "Who are you 'n' where'd you come from? You ain't more'n three years old, if you're an hour. Where's your mama 'n' your papa?"

He placed her back on the blankets.

"Now a fire, Kazan!" he said.

He held the la[illegible] above his head and found th[illegible] narrow vent which Blake had [illegible] thru the snow-and-ice wall f[illegible] the escape of smoke. Then he w[illegible] outside for the fuel, freeing Ka[illegible] the way. In a few minutes [illegible] a small, bright blaze of a[illegible] smokeless larch-wood was li[illegible] up and warming the inter[illegible] the igloo. To his surprise Pel[illegible] found the child asleep when [illegible] went to her again. He moved [illegible] gently, and carried the dead bo[illegible] the little Eskimo woman thru [illegible] opening and half a hundred pace[illegible] the igloo. Not until then did [illegible] to marvel at the strength whi[illegible] had returned to him. He stretched [illegible] arms above his head, and breat[illegible] deeply of the cold air. It seemed [illegible] something had loosened inside [illegible] him, that a crushing weight h[illegible] lifted itself from his eyes. Ka[illegible] followed him, and he stared [illegible] at the dog.

"It's gone, Kazan [illegible] cried in a low, half credulous [illegible] "I don't feel—sick—any mo[illegible] 's her—"

He turned back t[illegible] igloo. The lantern and the fire [illegible] cheerful glow inside, and i[illegible] growing warm. He threw of[illegible] heavy coat, drew the bear skin [illegible] front of the fire, and sat down w[illegible] the child in his arms. She s[illegible]. Like a starving man Pell[illegible] stared down upon the little thin [illegible]

GENTLY his roug[illegible] fingers stroked back the golden [illegible]. He smiled. A light came into hi[illegible]. His head bent lower and low[illegible] slowly and a little fearfully. At [illegible] his lips touched the child's c[illegible]. And then his own rough grizz[illegible] face, toughened by wind and st[illegible] and intense cold, nestled against [illegible] little face of this new and m[illegible]ious life he had found at the top of the world.

Kazan listened for a time, squatted on his haunches. Then he curled himself near the fire, and slept. For a long time Pelletier sat rocking gently back and forth thrilled by a happiness that was growing deeper and stronger in him each instant. He could feel the tiny beat of the little one's heart against his breast, he could feel her breath against his cheek, one of her little hands had gripped him by his thumb.

A hundred questions ran thru his mind now. Who was this little abandoned mite? Who were her father and her mother, and where were they? How had she come to be with the Eskimo woman and Blake? Blake was not her father, the Eskimo woman was not her mother. What tragedy had placed her here?

Somehow he was conscious of a sensation of joy as he reasoned that he would never be able to answer these questions. She belonged to him. He had found her. No one would ever come to dispossess him. Without awakening her, he thrust a hand into his breast pocket and drew out the photograph of the sweet-faced girl who was going to be his wife. It did not occur to him now that he might die. The old fear and the old sickness were gone. He knew that he was going to live.

"You" he breathed softly. "You did it, and I know you'll be glad when I bring her down to you."

And then to the little sleeping girl: "And if you ain't got a name I guess I'll have to call you Mystery —how is that?—my Little Mystery."

When he looked from the picture again Little Mystery's eyes were open, and gazing up at him. He dropped the picture and made a lunge for the pan of cream warming before the fire. The child drank as hungrily as before, with Pelletier babbling incoherent nonsense into her baby ears. When she had done he picked up the photograph, with a sudden and foolish inspiration that she might understand.

"Looky," he cried. "Pretty—"

To his astonishment and joy Little Mystery put out a hand and placed the tip of her tiny forefinger on the girl's face. Then she looked up into Pelletier's eyes.

"Mama," she lisped.

Pelletier tried to speak, but something rose like a knot in his throat and choked him. A fire leaped all at once thru his body; the joy of that one word blinded him with hot tears. When he spoke at last his voice was broken like a sobbing woman's.

"That's it," he said. "You're right, little one. She's your mama."

ON THE eighth day after Pelletier found the Eskimo igloo Billy MacVeigh came up thru a gray dawn with his footsore dogs, his letters, and his medicines. He had traveled all of the preceding night, and his feet dragged heavily. It was with a feeling of fear that he at last saw the black cliffs of Fullerton rising above the ice. He dreaded the first opening of the cabin door. What would he find? During the past forty-eight hours he had figured on Pelletier's chances, and they were two to one that he would find his partner dead in his bunk.

And if not, if Pelletier still lived, what a tale there would be to tell the sick man. For he knew that he must tell some one, and Pelletier would keep his secret. And he would understand. Day after day, as he had hurried straight into the north, Billy's loneliness and heartbreak weighed more and more heavily upon him. He tried to force Isobel out of his thoughts, but it was impossible.

A thousand visions of her rose before him, and each mile, that he drew himself farther away from her, seemed only to add to the nearness of her spirit at his side and to the strange pain in his heart, that rose now and then to his lips in sobbing breaths that he fought with himself to stifle. And yet, with his own grief and hopelessness, he experienced more and more each day a compensating joy.

It was the joy of knowing that he had given back life and hope to Isobel and her husband. Each day he figured their progress along with his own. From the Eskimo village he had sent a messenger back to Churchill with a long report for the officer in command there, and in that report he had lied. He reported Scottie Deane as having died of the injury he had received in the snowslide. Not for a moment had he regretted the falsehood. He also promised to report at Churchill to testify against Bucky Smith as soon as he reached Pelletier and put him on his feet.

On this last day, as he saw the towering cliffs of Fullerton ahead of him, he wondered how much he would tell to Pelletier if he found him alive. Mentally he rehearsed the amazing story of what came to him that night on the barren, of the dogs coming across the snow, the great, dark, frightened eyes of the woman, and the long, narrow box on the sledge.

He would tell Pelletier all that. He would tell how he had made a camp for her that night, and how, later, he had told her that he loved her, and begged one kiss. And then the disclosures of the morning, the deserted tent, the empty box, the little note from Isobel, and the revelation that the box had contained the living body of the man for whom he and Pelletier had patrolled this desolate country for two thousand miles. But would he tell the truth of what had happened after that?

He quickened his tired pace as the dogs climbed up from the ice of the bay to the sloping ridge, and stared hard ahead of him. The dogs tugged harder as the smell of home entered their nostrils. At last the roof of the cabin came in view. MacVeigh's eyes were like an animal's in their eagerness.

(To be continued next week)

Activities of Al Acres:—*A Concrete Example of the Possibilities of Al's Tin Hen!* : : *By Leet*

LEET

News and Notes

RESIDENTS of far-north Spitzbergen are making much ado over the first hen's egg ever laid in that country. The egg is of recent origin. It was laid in a hennery which has just been started in this land where the days and nights are both many months long. During the summer the sun shines twenty-four hours a day and the henhouse has to be darkened a part of the time to keep the birds from working themselves to death. In the winter, when the sun never comes above the horizon, artificial lights are provided for the diligent egg producers.

* * *

Iowa shipped nearly forty times as much butter to New York City during February as Pennsylvania California and Washington each shipped nearly three times as many eggs to the New York market, and Illinois shipped ninety times as much dressed poultry, as Pennsylvania.

* * *

Philadelphia received three times as many cases of eggs by express from Illinois during February as from Pennsylvania, and forty times as much of the city's butter came Minnesota as from the farms of the Keystone State.

* * *

There was approximately one pig, big or little, for every two persons in the United States on March 1, according to the United States Department of Agriculture.

* * *

The smallest of all birds, the humming-bird, is able to fly more than 500 miles without a rest. These tiny creatures are known to fly across the Gulf of Mexico, several hundred miles, in a single night. Another bird, the golden plover, makes the 2500-mile trip from Nova Scotia to South America in about forty-eight hours.

* * *

Scientists say that our universe is lens shaped,—something like one saucer placed upside down over another, their rims together. When we on the earth look toward the outside rim we see more stars than when we look toward the sides, because, the distance being shorter, there are fewer stars between us and the limits of the universe. We are told that when we look at the Milky Way we are looking toward the rim, i.e., toward the regions farthest from our earth.

* * *

This lens-shaped universe of ours is estimated to be 100,000 light years in diameter and 10,000 light years thick. A light year is the distance light travels in a year. Light travels 186,600 miles per second or nearly six million million miles (6,000,000,000,000) a year. And astronomers believe that our universe, with its billions of stars, is only one of hundreds of thousands of similar universes.

* * *

Six of the victims of a bad railroad wreck in Pennsylvania some months ago were holders of limited liability insurance policies. The dependents of each of those six men received $7,500 from the insurance company shortly after the wreck. The entire cost of those policies to the insured was $1.00 each.

Did you ever hear this one?—

We must all agree that when it comes to the question of occupation or profession, the character of either should be far greater importance than considerations of priority.

A doctor, an architect and a bolshevik were discussing the priority of their occupations.

The doctor said: "When Adam's side was opened and a rib removed to make woman there was a surgical operation—medicine was the oldest trade."

The architect—"Yes, but when the earth was made out of chaos, there was the building process, the use of materials according to a plan. The architect is therefore oldest."

The bolshevik smiled and said: "But who supplied the chaos?"—De Laval Monthly.

The late Ambassador Walter Hines Page was formerly editor of "The World's Work" and, like all editors, was obliged to refuse a great many stories. A lady once wrote him:

"Sir: You sent back last week a story of mine. I know that you did not read the story, for as a test I had pasted together pages 18, 19 and 20, and the story came back with these pages still pasted; and so I know you are a fraud and turn down stories without reading same."

Mr. Page wrote back:

"Madame: At breakfast when I open an egg I don't have to eat the whole egg to discover it is bad."—Office Cat.

Henry—Gracious, your mudguard is all smashed! Did you bump into something?

Dodge—No, of course not. We were standing perfectly still, and a fireplug skidded right into us.—Punch Bowl.

Judge—Did you, or did you not, strangle this man to death?"

Sippy the Sap—Not guilty, your honor. In the scuffle he cut himself on the chin, and I wrapped a tourniquet around his throat to keep him from bleeding to death.—Sun Dodger.

Husband (as wife reads seed catalog planning spring garden)—Those plants won't bloom for two years.

Wife—That's all right. This is last year's catalog.

"What became of your watch, my boy?"

"Here it is, father."

"What! The watch I gave you had a gold case, and this is silver."

"Yes; but, father, you must remember circumstances alter cases."

Customer—But if you are selling these watches below cost, where does your profit come in?

Dealer—We make our profit out of repairing them.

Eskimos are said to be the only happy people, possibly because they are ever able to keep cool.—Pittsburgh Gazette Times.

Wife (as they depart from the summer hotel)—Have we left anything, dear?

Husband—You mean, "Have we anything left?"—London Opinion.

Let poets sing their little song
And gaily smite the lyre;
Give me the man who whistles while
He's putting on a tire.

A hen is the only living critter that can set still and produce dividends.—Northwestern Confectioner.

You Can't Cheat Bossy

If you cheat "Bossy" she will cheat you. If you feed her just enough to live on, and expect her to give pails of rich, creamy milk, you're going to be disappointed. She can't make milk in paying quantities out of scanty or unbalanced rations, any more than you can "squeeze blood out of a turnip." If the feeds you give her do not contain all the milk-making elements in correct proportion she can't turn them into milk, for "Bossy" is a cow, not a magician.

Milk consists of protein, sugar, fat, mineral and water. Are all these things in "Bossy's" feed? If any are missing you won't get milk in paying quantities. "Bricks cannot be made without straw," a puzzle cannot be put together with one piece missing; a fire cannot be started without kindling—*and milk cannot be made unless it's in the feed.*

INTERNATIONAL Special Dairy Feed Is Milk in the Making

This great ration is specially compounded to secure maximum feeding results from all homegrown feeds. Special Dairy does just what you want a dairy feed to do—make more milk at less cost.

Special Dairy consists of choice ingredients—rich in nutrients, proteins, fats, starches, sugar and necessary minerals in required amounts. Contains pure rich cane molasses, keeps cows eating and drinking to full capacity—and makes every cow give more milk without increased feed cost.

Get Bigger Milk Checks!

Special Dairy is guaranteed to increase milk production at least "20 Extra Quarts" per each 100-lb. sack over any unbalanced ration. If less production, difference is promptly refunded in cash.

You can utilize home grown feeds to best advantage, get more milk, save on feed, and make more money at every turn by feeding Special Dairy—the ideal concentrate. See local dealer for trial ton today and insist on sack with the red sawtooth border, or write for name of nearest dealer.

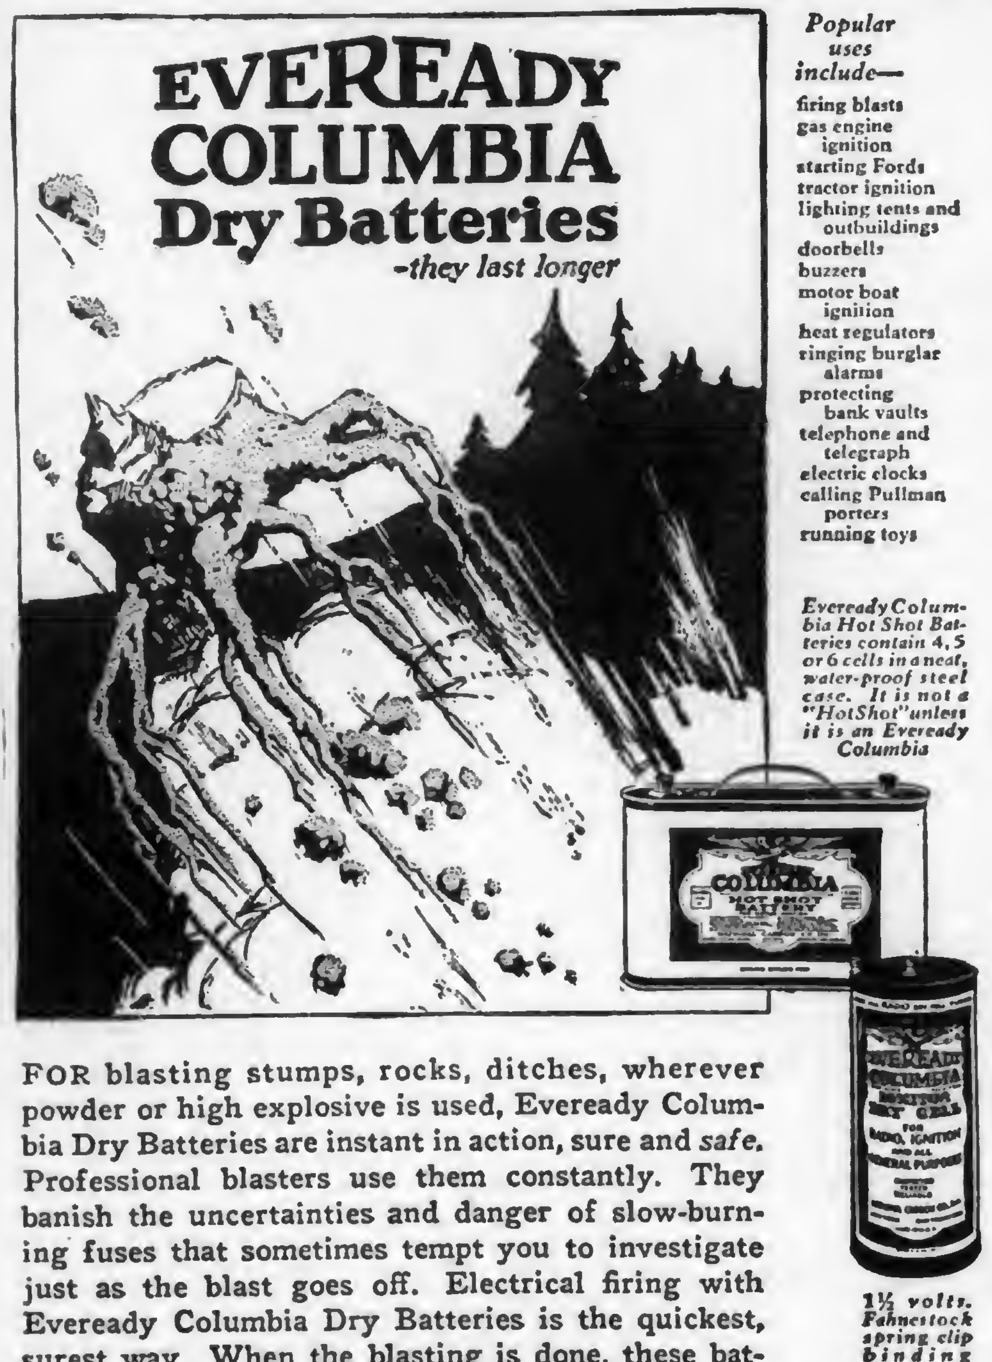
Fires every shot instantly, safely, surely

EVEREADY COLUMBIA Dry Batteries
-they last longer



Popular uses include—
firing blasts
gas engine ignition
starting Fords
tractor ignition
lighting tents and outbuildings
doorbells
buzzers
motor boat ignition
heat regulators
ringing burglar alarms
protecting bank vaults
telephone and telegraph
electric clocks
calling Pullman porters
running toys

Eveready Columbia Hot Shot Batteries contain 4, 5 or 6 cells in a neat, water-proof steel case. It is not a "Hot Shot" unless it is an Eveready Columbia

1½ volts. Fahnestock spring clip binding posts on the Eveready Columbia Ignitor at no extra cost

FOR blasting stumps, rocks, ditches, wherever powder or high explosive is used, Eveready Columbia Dry Batteries are instant in action, sure and *safe*. Professional blasters use them constantly. They banish the uncertainties and danger of slow-burning fuses that sometimes tempt you to investigate just as the blast goes off. Electrical firing with Eveready Columbia Dry Batteries is the quickest, surest way. When the blasting is done, these batteries are still good for weeks of work about the farm, starting Fords, running gasoline engines, a hundred-and-one tasks. There is an Eveready Columbia dealer nearby.

"Plant your corn, and forget about the crows"

is the message that W. E. Tyler, of Dewittville, N. Y., sends us, and permits us to broadcast to the thousands of corn-growers all over the country. Mr. Tyler, like every other corn-grower, had been losing hill after hill of corn. Scare-crows nor shot-gun could keep his fields clear of the pests. And what the crows didn't spoil, the moles, squirrels and gophers got away with as fast as they could. What to do, what to do, what to do, was Mr. Tyler's daily worry. Every day it became necessary to replant, costing him valuable time and valuable seed-corn. Then he heard of

Stanley's Crow Repellent

Like most other corn-growers, Mr. Tyler didn't believe that anything could stop the awful waste caused by the pesky crows. But he was willing to try almost everything. So he sent for some Stanley's Crow Repellent. He coated his seed-corn with it, and planted it at once, as it is not necessary to wait for it to dry, nor does it clog the planter. And from that day, Mr. Tyler's worries over crows were over for good and all time. If you want to stop your worries too, then do as hundreds of corn-growers are doing. Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. "Money Back" guarantee. If your hardware, drug or seed store doesn't have it in stock, then order direct. Address, Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

No. I'm not dead, but what is that stuff.
Let's get him out of this quick.
Seed coated with Stanley's Crow Repellent

A Wife and Husband Who Have Glorious Times

I CHUCKLED as I read the "first words" of Pennsylvania Farmer women—and I chuckled still more as I read the words of wisdom by the husbands. I suspect those letters have acted as safety valves and a lot of husbands and wives are feeling better. Especially so when they realize that other husbands and wives have trials and tribulations adjusting themselves to married life.

After all it has been just petty grievances that have caused most of the tragedy in homes. Really big issues can be settled—but petty grievances we have always with us.

When the issue of Pennsylvania Farmer came with the grievances of the wives, I tucked it away—I did not want my husband to see it. I did not want him to get a cynical look on his face and say: "Oh the poor women do have a hard time in this life—here is a bunch of abused ones telling their awful stories."

When the next issue came, I read it and laughed. Now I suppose my husband could read thru that series of letters and find his wife had failed him just about as many times as those wives failed their husbands. Let me tell you what I did.

Everything in Readiness

I served an especially nice supper—I put on my most gorgeous house dress—I saw that the furnace fire was fixed and I laid on my husband's reading stand by his big chair the issue of Pennsylvania Farmer wherein the men tell their grievances. Of course, husband picked it up and read it first thing. He said "Here, wife, have you read these stories?"

"Oh, yes," I replied, "I did read them. And now look here, that just set me wondering. I wonder just what I do that gets on your nerves most?"

Now, I know well enough the things I do that he dislikes, or that aggravate weary nerves. I know he writhes when I visit for five minutes over the telephone. I know he gets soul weary hearing the running water in the bath tub every night of his life—I know he likes to have me go to bed when he goes and get settled (I love to prowl about at night, mending and reading)—I know he thinks me absolutely foolish and fussy when I wash up the kitchen floor every day of my life (sometimes twice a day)—Oh, goodness, I know the things he dislikes my doing better than he does himself—

He looked at me thoughtfully for a moment and said: "Wife, I cannot think of a single thing you do that gets on my nerves."

And we have been living together for eighteen years!

After he had made that statement he really believed it.

Oh Yes, He's Human

Now there are things the husband does that used to be tragedy—tracking up the clean floor the minute I had washed it up—carrying my tea kettle to the barn and not bringing it back—continually dropping his clothes where he happened to take them off—but long these things ceased being tragedy and got into the comedy list.

And tragedy cannot stay long in the presence of a well-developed sense of humor.

And I have come to know that if he were particular about little things, he would not be my husband—the man I married—the man I love. It is because he is thinking, thinking continually in terms of big things that I do love him and that he does not notice the little things—like tracking up the floor. I realize that he is a good business man—that he carries big loads on his mind—and I know he could not do the big things so well as he does if he were continually nagged at and fretted at because of little things.

And we have a glorious time living together. And we have the most fun out of every day as it comes.—An Interested Reader.

The Most Intelligent Farm Animal I Ever Knew

Biddy Took a Buggy Ride

A FEW years ago we owned a certain Brown Leghorn hen which we always called the "Buggy Hen" on account of her liking for making a nest in the back of the buggy under the lid. Whenever she was not shut in the chicken coop she always managed to lay her egg in the buggy which was kept in a shed open at one end.

We usually looked for her egg before using the buggy, but one Sabbath we were having children's services at our church and as the services began a half hour earlier than usual we forgot to look in the back of the buggy before starting. In fact, we never gave the hen a thought until we had reached the hitching grounds and my father lifted the lid to get the tie-rope and the hen flew out somewhat frightened.

This was before automobiles were so plentiful as they are now and my father, not wishing to lose the hen, sat down with another man under a tree to watch where she went. There were dozens of buggies about and the "Buggy Hen" tried several of them but did not seem satisfied until she came around to our white horse and buggy again. Then she stopped, looked sideways at the horse, walked around and viewed everything from all angles, then flew into the buggy and proceeded to get a nest ready.

My father hurried and shut her in and then went in to the services. When we came out again to start home the hen had her egg laid.—I. A. T.

Bossy Had Common Sense

THE many acts of intelligence I have seen various farm animals do in the course of my life makes it very hard to select any particular one, but I believe a cow I lately owned and who was called Cherry Blossom (or Blossy for short), is fully entitled to the honor.

Blossy liked to ride in a truck. If I backed the truck up to a bank so she did not have too high a jump, she would climb into it herself and wait without tying. This she actually did the first time I hauled her.

One Sunday morning my neighbor's horses jumped into my oats field which adjoined the pasture but which could not be seen from the house. Blossy came to the bars and mooed till I went to see what was wrong. As soon as she saw me coming she started back to the pasture, but would stop, look back and moo until I followed her. When I saw the horses and started to drive them out, she at once went to feeding again, seemingly happy with a sense of having done her duty.

She was a purebred Guernsey, but thru neglect of a former owner could not be registered. Of course, she was tuberculin tested, and being an intelligent cow she was proud of it. When showing her to visitors she would always turn her head so they could see the tag.

With all her wit and beauty, Blossy never forgot her place in life as heavy producer of six per cent Guernsey milk. Her intelligence was not evinced by any spectacular feat, but by little acts of common sense, which of itself is somewhat uncommon even among humans.—W. A. L.

Roscoe Had Horse Sense

RECENTLY a stray horse took refuge near our barn. Everybody is familiar with stray cats and dogs, but a stray horse is unusual.

The horse was a medium size bay; sound and healthy in every way excepting a sprained leg. We fed and sheltered him, hoping the owner would call for him eventually.

Having a matched team of our own (Reuben and Roscoe), we never ventured to harness or even tie him. When the team was taken out of the stable, naturally Mr. Stray Horse would enter and clean up the mangers. Roscoe noticed this, and eyed him viciously. Being a slow eater, Roscoe always left a generous amount of grain in his manger, which he'd finish up when returned to his stall.

One day the stray horse stood near the stable entrance, unconcerned about anything, when the hired man returned with the team and plow.

On releasing the team, Roscoe hurried over and without warning backed close against the horse and sent him a swift double kick. Fortunately he was too close to injure the horse who galloped away. Roscoe chased him, driving him thru a wire fence that bounded the farm.

On-lookers thought it was a double runaway, and were astonished to see Roscoe turn back from the fence, and deliberately trot back to his manger with a very human like attitude of being well rid of the unwelcome guest.

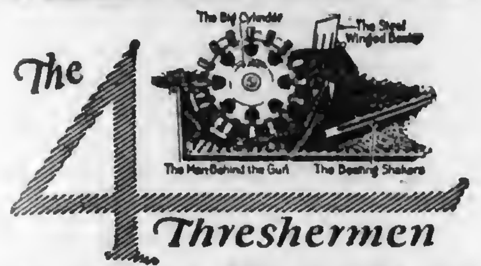
As a result the stray horse kept a safe distance from Roscoe, and was never seen entering the stable again.—M. S.

A Wise Dog and Loving Pullet

THE most intelligent farm animal I ever knew was a dog of ours. He seemed to have more human sense than my young husband. The dog knew how helpless a woman was and my husband did not; he would go away and leave me in a Negro belt, and the dog would stay and watch. Every few moments he would circle the house. Several times Negroes tried to get to the house to see my husband, not knowing he was away. The dog never let them get nearer than twenty yards of the house and when my husband was home the Negroes came and went as they pleased. The dog would not bother them as we had some Negroes working for us.

We had a young pullet take a flock of little peeps when their mother was killed soon after they were hatched. They were running around in the yard alone and the pullet saw them. She began to cluck and scratch and all the peeps stayed with her and she hovered them at night under her wings. I never knew a young woman to do that without big pay.—Lebanon County, Pa.

Because it SAVES All the GRAIN—



The 4 Threshermen
That Save All the Grain

The instant the head of a bundle comes from the feeder, the 1st thresherman, the Big Cylinder, tears into it. The big teeth of the cylinder and concaves are set by hand, close enough to thresh every kernel out of the head, but not so close as to crack the grain.

At the speed of a mile a minute, the Big Cylinder throws the flying straw and grain to the 2nd thresherman, the "Man Behind the Gun." The grain goes through its grate, is stopped by the check plate and sent direct to the grain pan. More than 90 per cent of the grain is separated right there, and separated forever, in a Nichols & Shepard Thresher.

The 3rd thresherman, the Steel Winged Beater, then takes a whack at the straw, batting it down to the 4th thresherman, the Beating Shakers that beat, beat, beat the straw, till the last kernel of grain is beaten out and saved.

Roller Bearings, Alemite-Zerk Lubrication and the Tilting Feeder are standard equipment on all sizes.

The construction is practically all steel—the machine will last a lifetime.

Send to us for our book, *"How a Good Thresher is Built,"* that will tell you how the 4 Threshermen will work for any farmer at a reasonable price.

Lowest Threshing Cost!

The cost of threshing is influenced by power, labor and time. And the way to reduce the cost of each of these items is to have a tractor and a separator that are *big enough for your job.*

A 24x38 Rumely Ideal Separator, fully equipped, for example, can be operated by a 15-25 OilPull (3-plow size) with utmost ease and economy. It requires a minimum of power. And the OilPull supplies the power at minimum cost. This is *real economy.*

The Rumely Continuous Flow Principle of Grain Separation secures maximum capacity and thorough separation. This means saved time—and saved time is saved money.

Another time-saving feature is the easy accessibility of all parts. Every oil cup and adjustment is easily reached from *the outside.* This means labor saved—another important economy factor.

Altogether these features reduce the cost of power, labor and time, thereby reducing the cost of threshing to a surprisingly low point per bushel.

Thousands of farmers have proved the efficiency of the Rumely Ideal. For over 70 years it has been a leader. But at no time has its wonderful economy been more pronounced than now. There are sizes of the separator and the OilPull to suit the needs of both the individual farmer and the professional thresherman. Write us for catalogs or see nearest Advance-Rumely representative. Paints and also Disinfects Dries White

CARBOLA
The Disinfecting White Paint

So Easy to Use
—In Poultry Houses, Cow Barns, Etc.—

Carbola is a white paint and powerful disinfectant combined in powder form. Simply stir the powder in a pail of water and it is ready for brush or sprayer—no waiting or straining. *Does not clog sprayer. Won't peel or flake.*

The powerful disinfectant does not evaporate but keeps its strength on the walls. Carbola will not spoil even in water and may be kept standing in pail to be used as wanted. One pound covers about 100 square feet.

Results Are Sure and Certain

Carbola is neither poisonous nor caustic—harmless to the smallest chick or stock that licks a painted surface. It gives walls and ceilings a smooth, white finish, increases the light, improves the appearance, and helps make buildings clean, sweet-smelling and free from mites and contagious disease germs. There is nothing better than Carbola for dairies, poultry houses, cellars, dog kennels, rabbit hutches, garages, tree trunks, etc.

It has been used for years by more than 100,000 dairy and poultry farmers and by agricultural colleges and experiment stations. We have a big file of letters from farmers and storekeepers praising it. Give it a trial—you will never regret it.

AS A LOUSE POWDER for use on cattle, poultry, horses, hogs, dogs, etc., the dry powder will be found most satisfactory. The dry powder is applied like any other louse powder, and is very effective—a first-class louse powder at 10c a pound.

Your hardware, feed, seed, poultry supply or drug dealer has Carbola or can get it. If not, order direct—prompt shipment by parcel post or express.

5 lbs. 75c and 10c postage 10 lbs. $1.25 and 15c postage 20 lbs. $2.50 delivered
50 lbs. $5.00 delivered 200 lbs. $18.00 delivered

Ready Money

at a time it will be needed - - - -

REAL SERVICE—immediately following a fatal accident, **ready money** to care for the unexpected expenses is a welcome relief to those upon whom the responsibility falls. If you should be the next, will your family be protected?

For Readers of PENNSYLVANIA FARMER

EVEN if you are careful—and most of us are—you must trust your safety to others—Auto Drivers—Engineers—even Providence. Just a moment's neglect by them and you may be the victim of a serious or fatal accident. A defective steering gear, a tire blown out, an unexpected rut or stone in the road or a sudden bolt of lightning may have disastrous results.

You cannot afford to trust to *luck* when only $1.00 yearly will protect you and your family from immediate inconvenience or want through a serious or fatal accident that may happen to you any day.

To have this needed protection immediately, fill in and return the application today. No medical examination is required.

This Travel-Accident Insurance policy, available to every reader of PENNSYLVANIA FARMER, will pay—

$5,000.00 for loss of life by wrecking of railroad passenger car, street, elevated or subway cars as specified in policy—

$2,000.00 for loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxicab or passenger elevator as specified in policy—

$1,000.00 for loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclones, tornado, as specified in policy—

$10.00 weekly for 15 weeks for all injuries sustained in the above manners as specified in policy.

PENNSYLVANIA FARMER is not in the insurance business but in line with its many years of service, PENNSYLVANIA FARMER has arranged for its readers the best and the greatest protection that can be given for the low cost—and it is available to every member of a reader's family. You owe it to yourself—you owe it to your family. The small cost of $1.00 a year places this protection within the reach of everyone. Send your application now.

$5,000.00

for only **$1** *a year*

Travel Accident INSURANCE

Any representative of PENNSYLVANIA FARMER will be glad to explain this policy to you. Applications must be made on the blank provided.

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

for $5,000.00 Travel-Accident Insurance Policy issued to readers of PENNSYLVANIA FARMER, Phila.

PENNSYLVANIA FARMER
Insurance Department, Philadelphia, Pa.

I am a reader of PENNSYLVANIA FARMER, more than 10 years of age and less than 70 years, not deaf or blind or crippled to the extent that I cannot travel safely in public places, and hereby apply for a $5,000.00 Travel-Accident Policy in the Federal Life Insurance Company issued thru PENNSYLVANIA FARMER. Enclosed is $1.00 (one dollar).

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Cows in the Wheat

I have a field of wheat sown for fall and spring pasture. I plan to seed it this spring with grass seed—fifty pounds to the acre—and let my cows work the seed into the soil as they eat off the wheat. Will that plan work all right? I could, of course, keep the wheat down by mowing it and not let the cows in at all. Which procedure would you advise? I would also like to know whether it would injure my alfalfa field to make two cuttings of the usual first cutting so as to keep the alfalfa from getting too coarse. I am not as much interested in tonnage as I am in quality of hay. If such a plan is feasible how high should I let the alfalfa grow before cutting the first time? I have a field infested with thistles. I plan to sow buckwheat thickly to see if that will smother them. What do you think?—A. C. D., Monmouth County, N. J.

Your plan to use a rather generous quantity of grass seed in your wheat would tend to offset the loss of many plants due to tramping by the animals. Nevertheless, if you allow your cows to graze on the wheat field soon after the seed is sown, considerable injury would be done and, at best, the stand of grass would be an uneven one. By modifying the plan to the extent of keeping the cows off the field after the wheat had been eaten off fairly close, the prospects of securing a fair stand of grass would be better.

Your third plan would be the best of the three, namely, to keep the animals off the field entirely after the grass seed is sown. The wheat can be cut green and used as a soiling crop. This will, of course, entail a larger expense in cutting the wheat and hauling it off the field.

Frequent Cutting Shortens Life

The frequent cutting of alfalfa will shorten the life of the crop. This may be offset by the greater value of the hay because of the larger proportion of digestible nutrients. Ordinarily, the first cutting of alfalfa should be ready in your locality about the end of May or the beginning of June. At that time the plants may be anywhere from eighteen inches to three feet tall. It is not likely that you would be ready to cut the alfalfa prior to May 15th. The next cutting would be taken about the middle of June provided normal rainfall conditions prevail. This would give you a good yield of hay of finer quality. At the same time, frequent cutting like that suggested might cause the field to run out in about two years. If, in your opinion, the increased value of the hay due to fineness and greater digestibility would offset the shorter life of the crop, there would be no objection to following the procedure that you have mentioned.

In the irrigated sections of California, and elsewhere, ten good cuttings of alfalfa are taken in the course of a year. An abundant water supply, favorable climatic conditions and a good reserve of lime in the soil make this possible. The alfalfa stands in such localities may last for many years. The alfalfa plants should be at least fifteen or eighteen inches high when cut according to the plan suggested.

The eradication of Canada thistle is made difficult because of the growing habit of this weed. It spreads by means of underground root stalks and cannot be eliminated except by thoro cultivation or by other means that would deprive the plant of an opportunity to develop growth above the surface of the ground.

Since Canada thistle shows particularly bad infestations in spots often limited in area, the use of a cheap grade of building paper to cover these spots might be advisable. By preventing the plants from developing growth above the ground, they can be destroyed within a single growing season. The use of sprays for the control of this weed has not given as economical and satisfactory results as clean cultivation or the covering of badly infested spots with building paper.—J. G. Lipman.

Raising Good Potatoes

I would like to ask you some questions on potato raising. I raised timothy hay on the land on which I expect to plant so I can't have a clover mulch. What is the best way to mulch? The ground is a loam so what is the best kind of fertilizer? What percentage? I expect to plant Irish Cobblers as an early crop and Rural Russets as a late crop. Is that all right for Pennsylvania? What diseases are common in Pennsylvania which may be prevented by spraying and what is the best time for spraying?—G. M., Lackawanna County, Pa.

In preparing land for potatoes it would be well to plow sod land the fall preceding planting. Exposure to the weather improves the texture of the soil and helps to get rid of some of the white grubs and wireworms that are usually found in sod land. However, if land is on a hillside and in danger of washing and erosion during the fall and winter, it is best to plow in the spring.

It would be well to manure the plowed land and to work the manure thoroly into the surface soil. A fertilizer containing about five per cent of ammonia, eight per cent of phosphoric acid and five per cent of potash would best serve your purpose. If manure is available, as suggested, the fertilizer application may be at the rate of 800 to 1000 pounds per acre. If no manure is available and fertilizer alone is to be used, the application might be at rate of 1200 to 1500 pounds per acre.

Varieties for Pennsylvania

Irish Cobblers for early planting and Rural Russets for late planting would be quite satisfactory for Pennsylvania. You will find it profitable to use certified seed potatoes.

The diseases most common in your locality which would be controlled by spraying with Bordeaux mixture are late and early blight. The Bordeaux mixture also will be a substantial help in keeping both flea beetle and leaf-hoppers off your potato vines. Where the control of the Colorado beetle is also desired, it would be necessary to add some arsenate of lead to your spray mixture. The spraying with Bordeaux should begin when the potatoes are about five inches high and an effort should be made to keep the vines covered by spraying every ten days or so.—J. G. Lipman.

Avoid Oat Smut

LOSS from oat smut can be avoided entirely by seed treatment. The use of either formaldehyde or copper carbonate dust is satisfactory for oats and both treatments are easy to apply to the comparatively few bushels of seed used on the average farm. Instructions for carrying out these treatments can be obtained from the local Farm Bureau, the Department of Agriculture at Harrisburg, or from the Pennsylvania State College.

RADIO DEPARTMENT

Have Lead-In and Arrestor Properly Installed

WELL, spring seems to have decided to return at last and most of us welcome the change wholeheartedly. Of course, there are plenty of radio fans who'd like nothing better than a continuous succession of cold "DX Nights" when we can sit by the fireside and hunt on the dials for those faint voices and strains from afar.

Warmer weather gives all of us the opportunity to get outdoors and make the repairs about our dwelling places that a long winter season always makes necessary. While we are at it, we should look over our aerial wires and the outside installation generally to forestall breaks and make what improvements we find possible.

Some of the work we can do to improve the antenna system is to tighten up the guy-wires which support the masts; to inspect screw-hooks and points where the ends of the aerial are fastened to insure security; to scrub and wash the soft-coal smoke and dirt from the insulators; and possibly to replace breaking wires and cracked insulators with new. Sometimes the strands of the wire will become broken during strong winds and since aerial wire of the very best sort is so cheap, the most certain remedy in this case and the least troublesome is to put up new wire.

Important Item Often Ignored

The lightning arrestor is quite an important item in the antenna system. It is astonishing how many people will simply ignore this matter altogether. Everyone using an outdoor aerial should feel it his duty to include this safeguarding device in its make-up. Should he feel, as certainly some do, that the arrestor is not necessary, he should include it if only to insure the validity of the fire insurance policy on the house he lives in. The exact regulations applying in all locations must be investigated and ascertained by an inquiry of the fire insurance company or agent covering the property. In many cases their representative calls to inspect the job and his approval is placed on the policy.

The principle upon which the construction of the lightning arrestor is based is quite interesting. The device itself consists essentially of a tiny gap which is sometimes enclosed in an evacuated glass tube. The gap is formed of two separate points of metal, one of them being connected to the aerial and the other to the ground. During a thunderstorm the atmosphere gathers a static charge of electricity which seeks to discharge to the ground and equalize or dissipate the strain between sky and earth. Metallic objects sticking up into the air permit these charges to leak away slowly and no heavy accumulation is likely to collect over a spot where this slow leakage can go on. Hence, such a point is less likely to receive a bolt of lightning.

Sparks Jump the Gap

Tiny sparks constantly jump across the points of the arrestor. The leakage might go on thru the set to some extent, but the devious path into the house, to the set, around the antenna coil of wire and back again is a strong obstruction and the charge much prefers to jump the gap in the arrestor. In this manner, the radio aerial that is adequately equipped with a good lightning arrestor is a very material safeguard to anyone's property and is similar in results to lightning rods.

Altho the inside type of arrestor is permitted in very many cities, the outside form is really the more effective. In addition, the plan makes possible a far better earth connection than one can secure by merely attaching a wire to the radiator. Bring the aerial lead-in down from the aerial in a curve so that it will be quite far out from the wall until it nears the window. Fasten the arrestor to the wall or a foot out from it and attach the antenna wire to the upper terminal (usually labeled). Do not cut the aerial wire, however, but continue it from that point inside thru the porcelain tubing which you ordinarily provide to bring the wire thru the window-frame.

Don't Need to Cut Wire

Thus the aerial lead is connected to the arrestor and also to the antenna binding post of the set without the necessity for cutting the wire. The ground wire, which you attach to the lower terminal of the arrestor, may be of any convenient size. Some locations require the use of a very heavy ground wire—as large as No. 8. This can be held on porcelain nail cleats driven into the mortar between bricks or into the sheathing boards.

A good lightning ground can not be made by driving a piece of iron pipe into the soil. A far better connection than that is needed. Usually it is most convenient to pass the wire thru a porcelain tubing set in the cellar window-frame and to run the wire thence in the most direct line to the water main at the point where it enters from the street. The necessity for filing the pipe thoroly before tightening on the ground clamp is certainly well understood.

To use this ground wire for the radio ground as well, it is necessary merely to insert a second porcelain tubing in the window-frame where the lead-in enters. A wire from the ground post of the set is run to the bottom terminal of the arrestor. In fact, if this is planned ahead of time, it is possible to start the ground wire at the ground post of the set, run it out the window, wrap it around the lower terminal of the protective device and thence on its way to the cellar water-pipe.

When Ground Pipe Required

Where the law requires a ground pipe outside, simply drive one into the earth about four to six feet and fasten a ground clamp to it. There is nothing to hinder continuing the wire into the cellar, however, where a more effective ground can be had by attachment to the water main.

The two porcelain bushings in the upstairs window-frame thru which the ground and aerial wires pass ought to be at least one foot apart and the wires themselves should NEVER be twisted together as so many are prone to do. Such practice forms a small condenser between aerial and ground and a considerable portion of the valuable energy picked up on the aerial jumps across this way before it arrives at the set.

An efficient installation of the lead-in and arrestor goes a long way toward maximum signal volume. Remember this basic principle—keep the aerial wire and lead-in far from other objects, but the ground wire can be fastened close against the wall if you wish.—B. F.

Dolan—Rafferty, your boy threw a lump of coal at my boy.

Rafferty—That's a Rafferty for you! When he feels that a principle is at stake, he doesn't think of expense."

For your light truck, use Kelly Cushion Tires

KELLY Demountable Cushion tires are intended to replace pneumatic tires on Ford and other light trucks in service where the wear on pneumatic tires is excessive.

Kelly Cushions are practically as easy-riding as pneumatics and while they cost a little more they are far cheaper in the end because they will stand up under heavier loads, are not subject to puncture and will last two or three times as long.

They come in sizes to fit 30x3½, 30x5 and 33x5 rims.

KELLY-SPRINGFIELD TIRE CO.
250 West 57th St. New York

FARQUHAR GRAIN THRESHERS

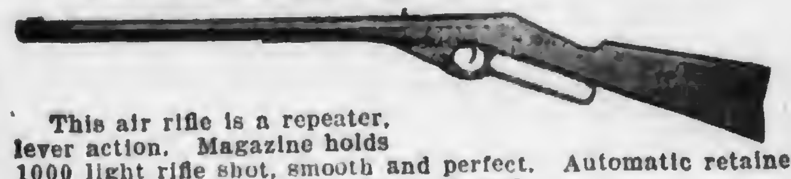
May Be Operated by Farm Power

The "Farquhar Junior" Thresher is designed and constructed in full accord with the best experience of thousands of threshermen who have made money operating a threshing rig. Has a capacity of about 50 bu. per hour of average wheat when driven by the farm tractor or other light power. Equipped with hand or self feeder, straw carrier or wind stacker.

Write for Illustrated Bulletin giving full information. Learn how easily you can thresh your own crop when it suits you best—thresh for your neighbors and thus make more days work for your tractor. We also build a tractor press for baling Hay and Straw.

Box 546 A. B. FARQUHAR., Limited YORK, PA.

1000 Shot Air Rifle



This air rifle is a repeater, lever action. Magazine holds 1000 light rifle shot, smooth and perfect. Automatic retainer prevents shot from rolling out of barrel. 36 inches long. Gun metal barrel. Walnut stock, dull finish. Given for 3 yearly subscriptions to Pennsylvania Farmer at $1.00 each. Reward No. 212.

LIVESTOCK

Review of local market for week ending April 10, 1926: After a dull, draggy week Saturday's market showed considerable life, both beef steers and cows being in demand. Receipts mostly from nearby feed lots. Comparisons with week ago: Beef steers, steady quality improved, top heavies, $9.75; medium weights, $9.65; several lots, $9.25@9.50; bulk, $8.50@9.25. Bulls and heifers slow, about steady. Butcher cows and canners fairly active, fully steady; bulk cows, $4.25@5.25. Calves steady with Friday's market or 50c lower for week; top vealers, $14.50. Hogs inactive, no receipts arriving since Monday.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)....	$ .39¼	$ .41½	$ .43¾	$ .43
Eggs, fresh gathered extra firsts (N. Y.)....	.30¾	.31¼	.29½	.30½
Chickens, live, by express (New York)......	...	...	.37	.40
Potatoes, 150-lb sacks (Philadelphia)........	9.00	8.00	6.75	1.20
Steers, good to choice (Lancaster)...........	9.37½	9.12½	9.62½	10.01½
Hay, Number 2 timothy, baled (Phila.).....	24.00	24.00	24.50	18.50
Wheat, No. 2 red winter (Philadelphia).....	1.70½	1.67	1.74	1.77½
Corn, No. 2 yellow (Philadelphia)...........	.78½	...	.78	1.81
Oats, Number 2 white (Philadelphia)........	.52	.51½	.51	.55½

Hogs—Receipts, 325; market slow to steady. Desirable light weights, 25c higher. Bulk of sales, $14.25@14.50; top, $14.75. Medium weight, 200@250 lbs, medium, good and choice, $13.25@14; light weight, 160@200 lbs, common, medium, good and choice, $13.75@14.50; light lights 130@160 lbs, common, medium, good and choice, $14@14.75. Packing sows, smooth and rough, $10.75@13.25.

Cattle—Receipts, 350; calves, 50. Market fairly active for beef steers and bulls, other classes slow. Beef steers steady to strong; better grades, medium and heavy bullocks, 15@25c higher. Common killers steady. Bulls, she stock and canners practically unchanged. Calves steady; top vealers, $14.50.

Steers—1100@1500 lbs, good, $9@9.75; medium, $7.75@9; common, $6.50@7.75. Steers, 1100 lbs down, good, $8.75@9.50; medium, $7.50@8.75; common, $6.25@7.50.

Heifers—Good and choice, 850 lbs up, $7.75@9; common and medium, all weights, $1.50@7.75.

Cows—Good and choice, $6@7.25; common and medium, $4@6; canner and cutter, $2.50@4.

Bulls—Good and choice, beef, 1500 lbs down (yrl. exc.), $6.50@7.50; canner to medium, canner and bologna, $4.50@6.50.

Vealers—Medium to choice, $13.25@14.50; cull and common, $5@13.25.

YORK PRODUCE

Butter and Eggs—Country butter, 50@55c; separator, 55@60c; eggs, 28@32c.

Poultry—Hens, 24@28c lb; dressed, $1@2.50 ea.

Vegetables—Potatoes, 25@50c ½ pk, $2.50@4 bu; cabbage, 10@20c hd; lettuce, 10@20c hd; celery, 8@20c stalk; carrots, 3@5c ea; horseradish, 5@10c glass; onions, 10@25c ¼ pk; beets, 1@5c ea; soup beans, 10@15c pt; lima beans, 35c qt; spinach, 20@25c ¼ pk; turnips, 8@10c box, 12@15c ¼ pk.

Fruits—Apples, 10@24c ¼ pk, $1.25@3 bu; strawberries, 50@60c qt.

Retail Grain Market—Wheat, $1.90; corn, $1; rye, 90c; oats, 65c; bran, $1.90 cwt; middlings, $2.25 cwt.

Wholesale Grain Market—Wheat, $1.68; corn, 72c; rye, 80c; oats, 50c; bran, $36 ton; middlings, $40 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 42c; do, choice, 41c; do, good, 40c; do, prints, 42@44c; do, blocks, 41@43c; do, ladles, 36@38c; Md and Penna, rolls, 34@35c; Ohio and W Va, rolls, 34@35c; store packed, 33@34c; Md, Va and Penna, dairy prints, 34@36c; process butter, 38@39c.

Eggs—Market weak; nearby fresh-gathered firsts, 1 sale 40 cases, 28c. Closing offerings, nearby fresh-gathered firsts 28¼@28½c; bid 28c. Quotations, fresh-gathered firsts, free cases, all sections, 28c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 34@35c; 3½@4 lbs, 34@35c; Leghorns and other light fowl, 30@32c. Old roosters, 20@22c. Young chickens, large size, fat, 38@40c; Leghorns and other light stock, 30@34c; all kinds, poor and thin, 30@32c; springers, 1¼ lbs and over, 55@58c; springers, white Leghorns, 48@52c. Ducks, White Pekins, 34@35c; Muscovy, young, 33@34c; puddle, 33@34c. Guineas, young, large, 75@85c; old, 35@50c. Pigeons, young and old, pair, 40@45c.

Spring bran	32.75@33.50
Soft winter wheat bran	34.50@35.00
Hard winter wheat bran......	33.00
Standard middlings	31.75@32.00
Soft winter wheat middlings..	33.20@35.50
Flour middlings	35.00@38.00
Red dog flour	39.00@40.00
White hominy	30.50@31.00
Yellow hominy	30.50
Gluten feed	38.35
36 per cent cottonseed meal..	38.25@38.50
41 per cent cottonseed meal..	40.50
43 per cent cottonseed meal..	41.50@42.50
31 per cent linseed meal.....	52.75@53.20

Millfeed in good demand with supplies light owing to curtailed flour production.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

WOOL MARKET

Boston, April 10, 1926.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 46@47c; ½-blood combing, 46c; ⅜-blood combing, 45@46c; [illegible] unwashed, 38@40c. Michigan and New York fleeces—Delaine, unwashed, [illegible]; ½-blood combing, 44@45c; ⅜-blood combing, 45c; ¼-blood combing, 42@43c; [illegible] unwashed, 36@37c. Wisconsin, Missouri and average New England—½ blood, 41@42c; ⅜-blood, 43@44c; ¼-blood [illegible] 43c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, April 10, 1926.

Cloverseed, domestic, $21; imported, $14.35; October, $15.65. Alsike, cash, $17. Timothyseed, cash, $3.40; September, $3.50.

County News and Comment

Armstrong County, Pa.—Have had no "plow weather" yet. Oat seeding time is here and very little plowing done. This will mean late seeding and perhaps insufficient tillage. Wheat and rye are now showing last fall's weakness and winter's rigorous treatment. Many farmers complain that alfalfa seeded last August heaved badly and even old plots winter killed severely. Persistent winter weather has held the fruit buds in check and as yet they are not much swollen. All pruning and spraying has been done by those who practice reasonable orchard methods. Fertilizer all hauled, oats has been recleaned and in many instances treated for smut. No garden truck has been planted yet but plants in hotbeds nicely started. Stock generally has come thru winter in good flesh. Clover all been seeded, generally a mixture of medium red and alsike in a two to one blend in order named. Much better success is being realized on pig litters coming now than those that came earlier. Home hatched chicks coming out now with a low percentage of fertility. Certified seed potatoes purchased elsewhere are coming forward in good condition. Markets: beef cattle, 800 to 1000 lbs, 8@8½c live; pork market about over by the dressed carcass; poultry, good fat hens, 30c live; wheat, $1.60; rye, $1.10; corn, $1; shelled oats, 50c; seed oats, 75c; butter, 40c; eggs, 30@35c.—W. M. P., April 8.

Bradford County, Pa.—Roads now opened from snow but some almost impassable on account of mud. Not much hauling being done except on hard roads. Winter grains look promising but haven't started as yet. Orchards being pruned. Farmers busy in the sugar bush. The year promises an average run. Syrup sells very readily at $2 a gallon. More townships being signed up for the T. B. test. Many farmers setting out forest tree seedlings for reforestation. Lots of idle land that should be put to such use. Egg production at its peak now. Very little roup and colds this year. Poultry clubs are well attended. Many people have been sick. The country doctor problem is getting to be a serious one.—G. E. E., March 31.

Broome County, N. Y.—April and hill roads still full of snow. Snow is like ice and the men have found it easier to use a cross-cut saw with one handle when cleaning away drifts than to try to cut it out with a shovel. They saw it into cakes and then throw it out. Tonight we are having as bad a blizzard as we have had this winter except that the temperature is not so low. Farm work will be late. Early potatoes usually planted in April but this year the ground is frozen and half covered with ice and snow. We have had such a long hard winter and so much sickness that the delayed spring is discouraging. Few farmers have potatoes to sell. The stores in the city pay $2.80 for them. Eggs, 28c; butter, 48c. Cows sell very high at farm auctions while horses are cheap. Good hay on cement road brings $10 and $12 ton. Many farmers are finding it hard to pay their taxes. More than the usual number have been turned in unpaid in our town. We surely needed relief more than those with large incomes.—E. M. C., April 6.

Cameron County, Pa.—We are having more winter weather, after nearly a month of sunshine. Quite a blizzard on the first day of April and still snowing. Roads in terrible shape. Not much sickness in county. Eggs selling at 40c in our local stores now. Butter, 50c. All meats high but farmers not getting much for it when they sell.—Q. E. T., April 3.

Clearfield County, Pa.—Temperature thru March has been low, today we are experiencing a blizzard. All buds are quite dormant, even our Japanese plums have buds as of mid-winter. Wheat and rye do not look as well as when we got our first peep at them. Roughage for livestock pretty well fed out on most farms. Roads very bad now and there is very little marketing except of butter and eggs. Some potatoes to market yet and a few farmers have small amounts of hay to deliver. Eggs, 30c; butter, 50@60c; beef, by the carcass or quarter, 10c at local shops; pork, 17c; potatoes, $2.50@3. Coal mines running slow and men seeking employment on state road work, very few apply for farm work and few farmers care for much help at present wage demand.—D. H. W., April 1.

Cumberland County, Pa.—April arrived with several snowstorms and the temperature dropped to the freezing point. Very little farm work done, except a few days hauling manure. Farm sales about over. All livestock, except horses, brought good prices and farmers realized more from their sales than they expected. Farm help scarce and wages high. T. B. testing on the area plan is being completed in several townships in the west end of the county. Potatoes, high, $3; apples, $1 basket; butter, 50c; eggs, 30c; honey, 25c; lard, 22c.—A. L. B., April 1.

Frederick County, Md.—March was exceptionally cold and rough. Grass looking poor and stand very thin. Grain is beginning to brighten up and looks good. Quite a few farmers have manure out. Farmers are cutting wood and sowing clover seed on calm mornings. Farm sales practically all over. Fewer of them than usual. Prices were good. Good cows brought $100 or over. Corn plentiful and low in price. Hogs for feeding scarce and high. Good pigs bringing $5@6 apiece, fat hogs around 13c per lb. Steers low, from 7c to 8c per lb. Apples plentiful and cheap.—R. J. W., April 5.

Juniata County, Pa.—Spring work being delayed by cold, wet weather. Farm sales over. Good prices were realized on livestock and farm equipment. Good cows sold around $100. Hogs from $18 to $20 per hundred pounds. Brood sows sold as high as $118. Not much spring plowing done yet. Manure being hauled to the fields. Farmers are signing up under the area plan for the eradication of bovine tuberculosis. Many farmers are busy attending to baby chicks. Clover seed being sown. Wheat fields are beginning to get a greener color. Local markets: wheat, $1.65; corn, 70c; oats, 50c; potatoes, $2.50; eggs, 27c; butter, 50c.—C. B. L., April 5.

Lackawanna County, Pa.—First three weeks of March cold with zero weather. A terrible wind and rain storm on the thirty-first did considerable damage thruout the county. Epidemics of measles, scarlet fever and grippe have hampered schools and public business thruout the month. Farmers are busy trimming trees and spraying. Much work usually done in March will have to be completed in April owing to sickness. Poultrymen are housing thousands of tiny chicks. Potatoes, $3; butter, 48@55c; eggs, 35@40c; live poultry, 35@38c, wholesale.—E. A. K., April 5.

Lebanon County, Pa.—March cold to the end and was hard on wheat and grass fields. Farmers busy hauling manure. Most people who bought farms, and tenant farmers who changed their abode, have taken charge of their new farms the last week of March. Wheat fields have begun to show signs of growth. Many orchards were pruned and spraying of fruit trees is now in order. A few more sales are being held but season about ended. Two cars of certified seed potatoes from Michigan have been shipped to Lebanon lately for distribution. There are yet some vacant farms in the County and in some instances adjoining farmers are taking care of same. Small pigs scarce and sell at good prices. Wheat, $1.60; corn, 65@70c; rye, $1; eggs, 27c; butter, 50c; potatoes, $2.70.—P. L. M., April 2.

Luzerne County, Pa.—March very cold here. Roads have been very bad in some places. Many deaths, especially among old people. Recently deaths at the following ages have occurred in this county: 102, 96, 95 and 92 years of age. The man who died at 96 worked in the mines when he was 84 years old. Many contagious diseases have been prevalent all winter. Not much outside work done here yet. After the coal strike every man who could leave home at all went to work in or around the mines. Many expect jobs on the county or state highways as soon as weather opens up. Grangers are very active in this county. A fine new Grange hall is being built at Bloomingdale. Hogs and little pigs are scarce. Not many sales on farms this spring and very few changes known. Corn is up and has been for a long time. We pay $2.40 per cwt., shelled. Eggs, 35c; roll butter, 45c; print butter, 55c; potatoes, $2.50@2.75 bu. Pea coal, per long ton, $8.12; buckwheat size coal, $3 at some breakers. Buckwheat flour, $4.60 cwt.; hay, in some places, $18 ton.—M. G. T., April 2.

Lycoming County, Pa.—Altho ordinarily considerable plowing is done at this time of the year, only a few farmers have tilled the soil thus far. A few farmers began plowing last week, but were unable to continue the work on account of snow and rain. It is a little too early to tell how winter wheat withstood cold weather, some farmers claim the outlook good but others fear it will not be so good. The gardening season also delayed by adverse weather conditions. Most of market gardeners hereabouts have been setting a few plants but the home gardener has so far done little or nothing. Indications point to a good fruit crop. Potatoes are selling at around $2 at the farm; eggs, 30c; butter, 50@55c.—C. I. C., April 7.

Prices and Prospects

PENNSYLVANIA potatoes broke all previous records for the season when they sold at $8.50 to $9.00 per 150-pound sack in Philadelphia on April 7th. The market during the week was active with the sharp advances at shipping points strengthening practically all of the consuming markets. New potatoes from Florida were strong during the early part of the week and on April 2 brought the highest price recorded since 1920. Spaulding Rose sold at $19 to $20 per barrel on the Philadelphia market. Toward the close of the week new potatoes weakened and prices dropped to $17.

High prices brought potatoes from the West into the eastern markets. A report from Yakima, Washington, states that one carload of eighteen tons of baking potatoes was sold to Philadelphia buyers at $18 per ton f. o. b. Yakima. Another car was also sold to dealers in Pittsburgh. It is claimed that this is the first direct f. o. b. sale of Washington potatoes for Philadelphia. Growers in that state expect the f. o. b. market to reach $100 per ton.

The lighter movement and advancing prices at shipping points indicate that supplies are clearing up in many sections. Since March the carlot movement has been decreasing in Northern Maine and Michigan and in Wisconsin. During the week ending April 3, Maine shipped 830 cars compared with 1300 a year ago. The output from New York points increased but it still averages below forty-five cars a day or less than half of last April's movement.

The output from Colorado and Idaho continues heavy and these two states together shipped 940 cars during the week or twice as many as during the early part of April in 1925. During March approximately 19,000 cars of old potatoes were shipped compared with 21,600 during the same month last year.

Wheat Market Weak

The wheat market weakened during the week ending April 3 and prices at several of the markets were forced down to new low levels for the crop. Favorable weather for the development of the winter wheat crop combined with the lack of export demand were the causes of this condition. The rye market declined with wheat and the movement of corn was lighter at most markets. Oats were more active and the market was firm.

Storms and cold weather over a large part of the country restricted hay offerings during the week. Supplies of desirable hay were equal to buyers' needs and sold at steady prices but poorer grades moved slowly. The market for timothy hay averaged firm. Rainy weather and liberal offerings resulted in lower prices in New York. The Boston market held steady with lower grades draggy. Prices at Pittsburgh recovered part of the previous week's decline.

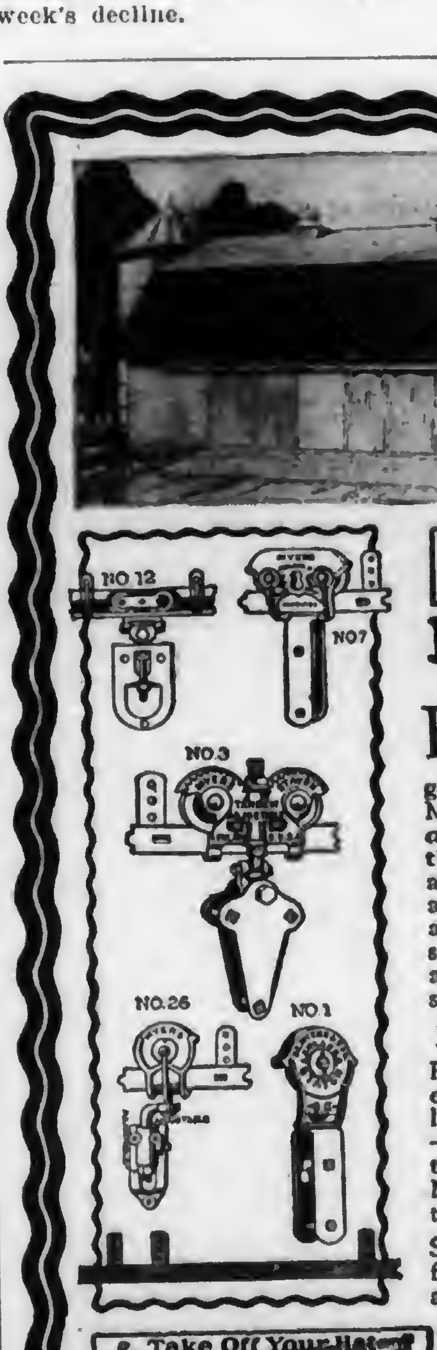
The New York egg market declined during the latter part of the week ending April 7 and the demand became more active for cheaper grades. Nearby white eggs were accumulated with the demand for fancy grades insufficient to clear all offerings. Shipments from the central western states were retarded by bad roads and snow. The market on April 7 closed with nearby extra firsts selling at 33c to 34c per dozen and gathered firsts to extra firsts at 32c to 34c.

Live Poultry Demand Fair

Supplies of live poultry were generally plentiful in New York during the week and the demand was only fair. The market was unsettled and weak for the most part. Express receipts of broilers were in strong demand and prices averaged higher. Dressed poultry was in light supply and the market was steady to firm under a limited demand.

The Philadelphia egg market was irregular during the week. Receipts were heavy and totaled 38,502 cases, of which number Pennsylvania supplied 4273 cases. The holiday trade was brisk and prices held up well, but since that time the market has weakened. On April 7 extra firsts sold at 32½c per dozen and firsts at 31c.

During the trading week ending Wednesday, April 6, the Philadelphia butter market showed little snap and practically all of its actions were in response to moves of the New York and Chicago markets. At the opening of the week the market advanced a cent to 42c, as the result of firmer sentiment caused by rather severe storms thruout the West, centering around Chicago. The advances at Philadelphia weakened the market as the supplies of all grades were in excess of buying demand at all times. As a result sharp declines were recorded on all scores on the closing day.—W. R. Whitacre.



MYERS Door Hangers

BUILT for lasting satisfaction—Myers Door Hangers are the most efficient hanger equipment made for barns, garages, warehouses and like buildings. Myers Door Hangers stay on the track—always,—and they insure perfect operation at all times. Their flexible and adjustable features and all weather construction are exclusive patented features of Myers and their steel roller bearings mean smooth, easy running. A full line of single and tandem hangers in stayon and tubular styles for doors of all sizes.

Myers Honor-Bilt Products

For fifty-five years Myers has built the highest grade door hangers, hay and grain unloading tools—hand pumps—spray pumps—power pumps—and complete water systems. As World Headquarters for Pumps, Myers has earned an international reputation for quality and service.

Honesdale's Big Party

Why the Murrays Do Big Business in a Small Town

MOST Pennsylvania farmers haven't been thinking very much about fairs during the last few weeks. But in one Pennsylvania county farmers have actually been going to the fair during the week after Easter. They didn't call it going to the fair. They called it going to Murray's Big Party, but it was practically the same thing to the people up in the extreme northeastern corner of the state.

The Big Party included about everything to be found at a county fair, and a lot of attractions besides, including free eats served to all comers by "Mother Murray and Mrs. Bob."

A Real Get-Together

This annual big event in Honesdale, the county seat of Wayne County, has grown out of the efforts of a progressive hardware and farm supply concern to provide a real get-together for the farmers of the vicinity,—an affair that would bring profit as well as pleasure to all who attended. The Big Party is a mixture of educational exhibits, fun, farm machinery demonstrations, home convenience displays, good eats, and more fun.

The history of the Big Party dates back to 1836 when a Wayne County farmer by the name of Murray decided to quit farming and go into business in Honesdale. He started out with a little place on Main Street where he sold implements, fertilizer and salt. Business wasn't very brisk, so he sent his oldest son, Bob, out into the surrounding country to try to sell fertilizer. At that time Bob didn't know much about fertilizers, and the farmers knew less. Many of them thought he was trying to sell them gold bricks, so Bob didn't do much business.

When Bob reached the age of twenty-one, the elder Mr. Murray decided to turn the business over to him and his younger brothers, Phil and Quintin. The three brothers put their heads together and decided that the farmers of Wayne County could use commercial fertilizer to good advantage, if anyone could tell them how to use it properly.

Studied until They Became Experts

They decided it was up to them, so they studied the subject until they were fertilizer experts. Then they staged demonstrations on nearby farms, proving that many of the farmers of the county were losing money because they weren't using the commercial plant foods.

In those days power for threshing and other heavy belt work was furnished by horses on tread mills. That didn't seem to the Murrays to be an economical way of doing things, and they persuaded a few farmers to buy gas engines to take the place of the treadmills. Everything went along fine for awhile, and then the engines began to balk.

Now, the Murrays might have thought: "It isn't any of our business if those farmers don't know how to take care of their engines." But that wasn't their way of doing things.

Learned How to Care for Engines

When the engines began to balk, Quintin packed his bag and went to New York, where he stayed an entire season studying gas engines and learning how to take care of them. Then he spent several months in a factory, putting the finishing touches on his gas engine education. When he graduated he went back to Wayne County and told the engine owners how to get good service out of their machines.

The Murrays have followed the same system in all their dealings with farmers. They started their annual Big Party several years ago to help promote this educational work, and to enable them to get better acquainted with their customers, and their customers with them.

This year the company's two large stores and warehouse were devoted to the entertainment of the thousands of visitors. There were demonstrations of everything from kitchen equipment to brooders, from electric pumps to garden tractors, from milking machines to house paint. Between times there were vaudeville acts, chalk talks, music. The display of fruits and vegetables was arranged by County Agent Wakely. Mr. Haswell, of State College, was there to help solve farm plumbing problems. Miss Partick, also of State College, presided over a model kitchen.

It was very evident to anyone visiting Honesdale during the week of the Big Party that the Murrays have prospered, and that they have thousands of warm friends among the farmers of northeastern Pennsylvania. The reason for their prosperity, in the face of stiffest competition, isn't hard to find.

Serve Customers Best, Their Slogan

From Robert J., the president, down thru the whole Murray organization of more than thirty, everyone works with the idea that the firm which serves its customers best is the one that will get the business. And the one that gets the business is the one that can serve its customers best.

The Murrays, being acquainted with their customers personally, are able to supply their wants better than anyone else. They have studied carefully the Wayne County farmer's problems and have in their organization experts who can answer any knotty questions that come up. They have proven themselves big business men even tho they do business in a country town.

Both farmers and merchants will be more prosperous when more of the latter get the idea of service which is exemplified by this Honesdale hardware and implement company.

Tobacco Letter

SPRING weather has hastened the planting season. A large percentage of tobacco farmers are preparing less seed bed space this year than they have in former years, and a few are eliminating the crop entirely.

A lot of tobacco not bought in the early part of the season has been taken up within the past month at prices ranging from six to eight cents per pound thru. The low prices prevailing on this year's crop have caused quite an export demand for low grade. Large shipments of low quality leaf are still being made, and the supply of this type of tobacco is almost exhausted.

A Healthy Sign

The steadily increasing production of five-cent cigars in York County is looked upon as a healthy sign for the Lancaster County growing industry, since the bulk of cigars of this class are made with Pennsylvania fillers. Probably the reduced revenue taxes will still further stimulate the manufacture of the "good nickel cigar," so that the outlook for Lancaster tobacco growers is not entirely gloomy.

All of these factors should be borne in mind by growers when deciding upon their 1926 acreage.—Lancaster, Pa., April 8.

The first farm fence still the best!

6 reasons why—

1 *Uniform* steel wire, drawn, woven and processed in PAGE owned and operated plants. No flaws, no "weak spots."

2 "Weather" proof as well as wear proof—heavily galvanized to resist rust and corrosion.

3 Easily erected over hills and hollows as well as level surfaces.

4 Concentration on a few standard types recommended by the United States Department of Commerce results in greater economy and lower price to you.

5 Strict adherence to original high standards, introduced by J. Wallace Page in 1883, insures the most durable, economical protection you can buy.

6 A dealer near you carries a complete stock—correct types for all farm uses, field, poultry, lawn or garden.

The best is by far the cheapest—ask your hardware dealer to show you the various Page styles. You'll find he carries the pattern you need. Write us for illustrated literature—no obligation.

free

Write for interesting literature describing in detail the fence that has been first choice for three generations. No obligation.

TELL the advertiser you saw adv. in Pennsylvania Farmer.

This Sailor Studied Poultry

(Continued from page 3)

to start bad habits, such as toe picking. I use peat moss in the brooder houses and put the chicks in for the first time at night. Then I sprinkle a little fine grit on the moss. The white against the dark background attracts the chicks and in the morning you find them scratching and picking at the grit."

Mr. Zimmerman has a clever arrangement for training the chicks to come in and out of the brooder house without crowding. At each door there is an incline leading to the ground. Fine wire netting runs along the sides of the runway forming a U-shaped enclosure. There are no corners for the chicks to bunch up in and they can easily find their way back to the warmth. As they learn to get in and out the U is lengthened and widened until after a few days they no longer require a guide. This saves time and loss, as it prevents huddling and the usual frantic chase to get the chicks in when a storm comes along.

P. D. claims that water, the cheapest article in a chicken's diet, is the most likely to be neglected. He keeps one two-quart jar of water to every fifty chicks and as they grow larger uses four two and a half gallon fountains to 500 chicks. In the laying houses he uses two large eight-gallon fountains in each room.

The laying pens are models of cleanliness and it is a sight to see the birds at feeding time. Plenty of nests are provided and the roosts are free from drafts. Green feed is provided and a variety offered. Sprouted oats, germinated oats and cabbage are fed on alternate days. This year it is planned to grow mangel beets for a winter feed. During the summer months rape is sown for the birds to run in and peach and apple trees have been planted for shade and fruit.

Old Romeo, a prize winner.

Mr. Zimmerman is an enthusiastic advocate of local markets and sells practically all of his cockerels and eggs in Harrisburg. He has found that there are very few times when it pays him to ship to large city markets. Small eggs are sold to restaurants and the best, as well as dressed poultry, are sold over a stall in one of the market houses. Since only a high class product is handled, a lasting trade has been built up that takes care of his output.

Culling is carried out faithfully at Whiteacres. The owner feels that one of the most important things is to feed the flock properly after it has been culled. "Culling alone is not sufficient since poor feeding can spoil the most carefully culled flock. I don't force my breeders. I cull them twice a year and select nothing but eggs weighing twenty-three to twenty-eight ounces to the dozen for setting. My object is to breed hens of a heavy type that are capable of laying a large chalk-white egg. I like Leghorns with small combs for this section on account of freezing."

This poultryman's naval training has made him a stickler for detail. The birds must be fed on time, their food must be just right and the water fresh and clean. He is enthusiastic about his work and enjoys it. His flock reflects intelligent handling and the many ribbons won at the leading poultry and egg exhibits in this and other states are an evidence of his ability.

Mr. Zimmermann, the sailor-poultryman.

He still likes to tell yarns of the sea, but that is in the past and he is more interested in the future and in that flock of Leghorns.

Feed Market Situation

THE feed market has developed a firmer tone during the past few days as a result of lighter offerings. Prices of wheat feeds and high protein feeds have worked slightly higher but other feeds are practically unchanged.

The continued slow demand of flour has restricted the mill output of wheat feeds and offerings for spot or immediate shipment have become small and are rather firmly held. Offerings for deferred shipment, however, are still easily equal to the demand and prices of the deferred offerings are at 50c@$1 per ton discount under spot prices in most markets.

The linseed meal market has also been strengthened by the small offerings of linseed meal. Argentina flaxseed, however, is beginning to arrive in the United States and meal from this seed is being offered in eastern markets at prices relatively lower than meal from domestic seed.

A further reduction in the production of cottonseed meal and the light stocks of high grade meal have caused a firmer tone in the cottonseed meal market. Offerings of off color and low grade meal continue large and this can be bought at considerable discount under prices of prime meal, which are holding firm. Offers of high grade meal are principally from the southwestern crushers.

Prices of corn feeds remain unchanged and mills are holding hominy feed prices steady in spite of the light demand. Production of gluten feed continues heavy but stocks are small as a result of the increased demand occasioned by reduction in prices to a grass price basis.

The alfalfa meal market is dull.—United States Bureau of Agricultural Economics.

WATCH your horses carefully these days. Guard them against strained tendons, stiff joints, troublesome growths. Treat them with Gombault's Caustic Balsam. Keep this wonderful remedy ready for emergencies. For 42 years it has been giving quick relief for Sprains, Spavin, Splint, Capped Hock, Curb, Fistula, Thoroughpin, Shoe Boils, Poll Evil, Wire Cuts, Muscular Inflammation.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS BUNCH ON NECK—LAMBS DIE.—I have a four-year-old heifer which has developed a large hard bunch on her throat just back of the lower jaw bones. It is the size of a quart dipper and is growing rapidly. It does not seem to affect her except she has fallen off some in milk. She will freshen next September. I also lost some lambs from digestive troubles. They lived and thrived until about two or three days of age then one would die from being constipated and maybe the twin mate would die of scours. They were fed clover hay. The cow is fed clover hay with a grain ration of corn, oats, cottonseed and linseed meal. Please give cause and cure if possible.—S. W., Milan, Pa. From the description given I am led to believe that the bunch is an abscess. If such is the case it should be drained promptly and kept clean until healing has occurred. The incision made to drain an abscess in this location, should be made by a veterinarian well versed in the anatomy of the area involved. A teaspoonful of castor oil to a lamb showing either constipation or scours will have a beneficial effect. Individual attention in these cases is advised. You are probably feeding these ewes one-fourth to one-half pound of grain per day. Usually one starts the grain ration several weeks before lambing and continues the grain ration during the nursing period.

COW GIVES MILK IN TWO QUARTERS.—We have a Jersey cow that is ten years old. On coming fresh on January 28 was giving milk from all four teats. After the calf was taken off five weeks later she only milked on two teats. Would you kindly advise us as to the cause, also a treatment or remedy of some kind?—S. K. D., Reynoldsville, Pa. It might be possible that this cow had an infection of these quarters which destroyed their efficiency. Milk the quarters several times daily, massage the udder carefully and endeavor to stimulate secretion. It is difficult to restore the secretion of milk but it is worth trying.

COW URINATES FREQUENTLY.—I have a cow that is constantly trying to urinate. A veterinarian tended her but with no success. She eats well and seems right in every other way only a little thin in flesh. Is there anything you could advise me to do?—H. B. D., Port Royal, Pa. There is evidently some irritation which causes this difficulty. There may be an infection in the kidney or bladder. There is possibility of a calculus in the bladder or lacerations of the vagina. If she has calved recently, the vagina may be lacerated. This cow should be examined by graduate veterinarian as treatment will be based upon a correct diagnosis.

NAVEL SWOLLEN.—I had a purebred cow freshen last Saturday morning. She had twin heifer calves and one of them I noticed yesterday morning had a swelling at the navel, a bunch as large as a teacup which discharges some. Calf eats well. Can you tell me something to cure the calf?—M. B., Spartansburg, Pa. The application of tincture of iodine to the navel once daily may serve to correct the discharge. This enlargement may be a small rupture which will probably disappear during the first few months of the calf's life. If an abscess has developed, free drainage may be required before healing will take place.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

CHICKS from heavy-laying strain. Barred Rocks 13c; Mixed, 10c. 100% arrival guar. Circular free. R. J. Ehrisman, Box 50, McAlisterville, Pa.

PURE BRED CHICKS—R. I. Reds, White and Barred Rocks, Jersey Giants, White Leghorns. Catalog free. The Monroe Hatchery, Selinsgrove, Pa.

WANTED—Black Giant, Ancona, White Wyandotte hatching eggs, case lots weekly. State quantity and price wanted. Chas. Taylor, Liberty, N. Y.

S. C. BROWN and White Leghorns, 332 egg. Pedigreed. Trapnested. Stock. Eggs $1.00 up. Catalog. V. Fulton, Gallipolis, Ohio.

PEAFOWL, Pheasants, Bantams, Pigeons, Guineas, Wild Geese, Ducks, Breeding Stock, Eggs. Free circular. John Hass, Bettendorf, Iowa.

JERSEY BLACK GIANT hatching eggs. Marcy and Pederick strains, $1.50 per 15. Mrs. Harry Hoover, Cochranville, Pa.

McCULLOUGH'S "EGGBRED" White Rocks—also—Black Leghorns—Eggs 15—$3.00. Plummer McCullough, Mercer, Pa.

BUFF ORPINGTON hatching eggs 15—$1.25; postpaid. Ray Shively, Montgomery, Pa.

LEGHORNS

SUPER QUALITY White Leghorn chicks of heavy laying 35 years trapnested ancestry. Prewar prices. Catalog free. Missouri Poultry Farms, Box 109, Columbia, Missouri.

HOLLYWOOD STRAIN S. C. W. Leghorns, America's best egg producers. Write for hatching eggs and baby chicks. White Wings Farm, Mooresville, Ind.

CHICKS—S. C. W. Leghorns, 12c; Mixed, 9c. Special prices on large lots. 100% guaranteed. Circular. Meadow View Poultry Farm, McAlisterville, Pa.

POTATOES

SEED POTATOES—Hill selected and certified seed potatoes. Cobblers, Russets. Write for catalogue and prices. Wm. A. Jones, Truxton, Cortland Co., N. Y.

SEED POTATOES—Russets, Green Mountains or any White Sprout Varieties, prompt shipment guaranteed, get our prices. Gruver-Schultheis Co., Hornell, N. Y.

SEED POTATOES—Write for guaranteed prices of our choice northern grown seed. N. A. Baker & Sons, Fairport, N. Y.

CERTIFIED SEED POTATOES—High yielding strains. Send for little folder and prices. H. L. Hodnett & Sons, Fillmore, N. Y.

ROCKS

PENNSYLVANIA Certified Barred Plymouth Rocks Baby Chicks, hatching eggs. Marcus A. McKnight, Carlisle, Pa.

BUFF ROCK hatching eggs, $1.50 for 15. Mrs. S. L. Gilbert, Cochranville, Pa.

MISCELLANEOUS

STORAGE BATTERIES of the Edison Alkaline type do not have the faults of lead acid type. Fortunate purchases from the Government and other large users make possible a real buy. All voltages and amperages. For radio, motor boats, and farm lighting plants. Before buying batteries get my interesting literature stating voltage and amperage desired. End your storage battery trouble by doing this now. Address B. Hawley Smith, 305 Washington Ave., Danbury, Conn.

WANTED—A Milk Wagon to carry 1½ tons, open body, seat with buggy top preferred. An old stage or school bus, if cheap and good, will answer. State condition and price delivered to Wilson steamboat, Phila. and Wilmington. Address "A. C.," Woodstown, N. J.

ROOFING—Remnants, smooth surface 1 ply—80c; 2 ply—$1.10; 3 ply—$1.40 per roll. Buffalo House Wrecking & Salvage Co., 477 Walden Ave., Buffalo, N. Y.

WILSON SOY BEANS $2.00 bushel; Virginia soy beans, $2.50 bushel; cow peas $1.25 bushel. Bags 12c each. Cash with order. Joseph E. Holland, Milford, Del.

OLD COINS and stamps wanted; buying list free; stamp and coin collector tells about stamps and coins, 6 months 25c. Kraus, 409 Chestnut, Milwaukee, Wis.

WANTED—A good reliable partner to go 50-50 in the poultry business in Florida. Guarantee success. Box 97, Penna. Farmer, Phila.

CASH PAID for dental gold, false teeth, discarded jewelry, platinum. Mail. Florida Gold Refining Co., 21 W. Adams, Jacksonville, Fla.

APPLE BUTTER—Good old kind, $1 gal. F. O. B. G. Routzahn, Aspers, Pa.

SOY BEANS—Black Wilson $2 per bushel. F. O. B. Aaron Mast, Westover, Md.

WRITE for low price. Delicious extracted Clover Honey. Appledorn, Hamler, Ohio.

PLANTS, SEEDS, ETC.

FROST PROOF cabbage and tomato plants. Varieties: Charleston and Jersey Wakefields, Copenhagen Market, Succession and Flat Dutch. Tomato, Bonnie Best, Earliana, Livingston Globe and Greater Baltimore. Prices, parcel post paid, 500—$1.50; 1,000—$2.50; 5,000 and over, express collect, $1.25 per 1000. We guarantee to ship promptly a good size plant that will please you. Tifton Potato Co., Inc., Tifton, Ga.

FROSTPROOF CABBAGE PLANTS—25 million Copenhagen Market, Wakefield, Succession, Ballhead. 300—$1.00; 500—$1.25; 1000—$2.25 postpaid. Expressed, charges collect, 10,000—$15.00; Golden Acre $3.00 thousand. Cash. Prompt shipments, good order delivery guaranteed or money refunded. J. P. Councill Co., Franklin, Va.

EARLY VEGETABLE PLANTS prepaid. Cabbage plants, $2.85 per 1000; cauliflower plants, $4.75 per 1000; onion plants, $2.75 per 1000. Tomato, celery, pepper plants ready April 10—50c per 100. David Rodway, Hartly, Del.

PLANTS postpaid to you. Asters, beets, cabbage, cauliflower, lettuce, tomato. Transplanted plants. All varieties, 8 dozen $1. 500—$1. 1000—$7.50. Satisfactory delivery guaranteed. Catalog. Rohrer's Plant Farms, Smoketown, Pa.

SWEET CORN—Five best varieties of both early and late at 23c per lb. Also three best varieties of field corn, vigorous and high germination at $2 per bu. Rock-Cliff Farm, Brogueville, Pa.

SET OUR Frostproof cabbage plants, 500—$1.50; 1000—$2.25 prepaid. Prices on tomato, cauliflower, pepper and sweet potato plants on request. Plants shipped safely anywhere. Tidewater Plant Co., Franklin, Va.

PROGRESSIVE Everbearing Strawberry plants 80c per 100. Two-year-old Concord Grape vines at 25c each; $2 per doz., 6 for $1.00. Rock-Cliff Farm, Brogueville, Pa.

ASPARAGUS GARDEN for $1.50. 50 Giant Washington Pedigreed, 50 Palmetto 2-year-old roots by mail postpaid. John B. Miller, Route No. 1, Kinzers, Pa., Lancaster County.

EARLY PLANTS— Tomato, Bermuda Onion, 1000 $1.75, Cabbage $1.25, Sweet potatoes $2.50. Large lots cheaper. Live delivery guaranteed. Catalogue free. Progress Plant Co., Ashburn, Ga.

LANCASTER COUNTY SURE CROP SEED CORN—Shelled or on cob, matured, selected in field. Glendale Poultry Farm, Irvin O. Musser, Shippensburg, Pa.

ASPARAGUS — Washington rust-proof, Palmetto, Barr's Mammoth. Good sturdy roots $1.25 hundred; $8.50 thousand. Prepaid. Pleasantview Farms, Sadsburyville, Pa.

STRAWBERRY and raspberry plants. Our business is to furnish you with good strong rooted plants at reasonable prices. T. G. Mangus, Pulaski, N. Y.

SEED OATS—Recleaned, grown by us, yielding 84 bu. to the acre. $1.00 per bushel. Griffin Farms, Box 20, Hudson Falls, N. Y.

VERY CHOICE Lancaster Sure Crop seed corn, one of the very best varieties for crib or silo. C. E. Cassell, Hershey, Pa.

25,000 WASHINGTON asparagus roots; rust resistant roots, well grown, $1.25 per hundred; $9.00 per thousand prepaid. Mahlon C. Briggs, Newtown, Pa.

60 BLOOMING GLADIOLI $1.00. No 2 alike. 12 Dahlias $1.10. Cannas. Catalogue. A. Sherman, Chicopee Falls, Mass.

COPENHAGEN cabbage plants, $1.00—1000; large open field grown. Prompt shipment. Quitman Plant Co., Quitman, Ga.

MILLIONS, cabbage, tomato and onion plants, $1, 1000. Catalogue free. Clark Plant Co., Thomasville, Ga.

HORSERADISH SETS $1.15 per hundred. Postpaid. Charles A. Simmenroth, Frenchtown, N. J.

TOBACCO

KENTUCKY'S best leaf tobacco. Guaranteed 3 lbs. chewing $1.00. 4 lbs. best smoking $1.00; 6 lbs. medium smoking $1.00. Pay for tobacco and postage when received. Co-operative Tobacco Growers, Hawesville, Ky.

HOMESPUN TOBACCO—Chewing five lbs. $1.50; ten, $2.50; smoking five lbs. $1.25; ten $2; cigars $2 for 50, guaranteed, pay when received, pipe free. Roy Carlton, Maxon Mills, Kentucky.

NATURAL LEAF smoking tobacco; aged in bulk; two years old, mellow and sweet, 5 lbs. $1.00; 10 lbs. $1.75. Pipe given. Satisfaction guaranteed. Farmers Union, Mayfield, Ky.

HOMESPUN TOBACCO, guaranteed. Chewing five pounds $1.50; 10—$2.50. Smoking, 10—$1.50. Pipe free; pay when received. United Farmers, Bardwell, Kentucky.

How One Crop paid the cost of draining 20 acres

It cost H. M. of Otoe County, Nebraska, $520 to tile drain a 20 acre field. Before draining, the field was under water so much of the time that it was scarcely fit for pasture land. *But the first year after the tile was laid, the field produced a crop of corn that paid the entire draining bill.*

How Savings return Mobiloil's higher price

Like this draining bill, Mobiloil's few cents extra per gallon is not additional expense but a profitable investment.

First, Mobiloil users frequently report a reduction in oil consumption of 10% to 50%. And the marked decrease in carbon and other troubles paves the way to important savings in yearly repair bills. It is because Mobiloil is the cheapest oil to *use* that Mobiloil is asked for by more farmers than any three other oils combined.

Make the CHART your guide

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil are indicated by the letters shown below. "Arc" means Gargoyle Mobiloil Arctic.

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed here, see the complete Mobiloil Chart at your dealer's.

No one oil will do!

You wouldn't think of taking the pistons out of your automobile engine and putting them in your truck or tractor engine. But do you realize that the different pistons in these engines may require entirely different grades of oil to properly lubricate and seal them? One grade of oil cannot possibly give you the best results in *all* your farm engines.

The piston design and other factors that affect the selection of oil for your engines have all been carefully studied by the Mobiloil Board of 42 engineers. They have supplied your Mobiloil dealer with a complete lubrication Chart of Recommendations. This Chart has the approval of 465 manufacturers of automobiles, trucks and other automotive equipment. Ask your Mobiloil dealers about it.

Of Course You Want a "Six"

300,000 Essex Owners

They Know Its Time Proved Values, Its Rare Smoothness and Performance, Its Sturdiness and Economy

Lowest Price in History

AT YOUR DOOR
With Nothing Else to Pay

Hudson-Essex Dealers now quote "At Your Door" prices, including freight, tax and following equipment:

Automatic Windshield Cleaner, Front and Rear Bumpers, Rear View Mirror, Transmission Lock (built-in), Radiator Shutters, Moto-Meter, Combination Stop and Tail Light.

This is the year of "Sixes". The trend is more irresistible than ever. What 300,000 owners know of Essex is turning new hundreds daily to its Super-Six advantages of smoothness, lasting performance and reliability—its riding ease, comfort and fine appearance.

Today's Essex is the finest ever built. In materials and precision standards it is equalled only in the costliest cars. It is economical in fuel, tires and oil, and in its freedom from repair needs in long hard service.

You, too, want such advantages. In Essex they cost but little more than the lowest priced "Fours".

HUDSON MOTOR CAR COMPANY, DETROIT

3 Master Keys 50c

Work troublesome door locks; replace lost keys; practically as SERVICEABLE as a whole bunch of ordinary keys. TREE STRAWBERRY

PLANT A FEW IN YOUR GARDEN

The Tree Strawberry is the largest and most beautiful of all berries. It is a new plant, both in habit of growth and form of fruit. The root is a perennial, throwing up numerous strong branching shoots about two feet high, with foliage that is ornamental and blossoms that are beautiful. It bears fruit continually all summer and fall, and the mammoth ruby-red berries, large white blossoms and glossy ornamental foliage make it a plant that is handsome to look upon. Not only are the berries beautiful and monstrous in size, but for jelly, canning and preserves they have few equals. The canes or shoots die to the earth in winter, new ones being thrown up the following spring, which begin blooming and setting fruit at once. The plant is hardy in any location or climate. No amount of cold or heat will injure it. A few of these bushes would make a most desirable addition to your garden. Plants will bear the first season and get stronger and larger each year.

We are giving away six of these strawberry plants for the purpose of introducing POULTRY KEEPER into new homes. POULTRY KEEPER is devoted to practical poultry raising. It tells how to make money from poultry. It is chock full of interesting matter concerning poultry raising.

Send $1.00 for two years' subscription to POULTRY KEEPER and we will send you six of these tree strawberry plants free of charge. Address

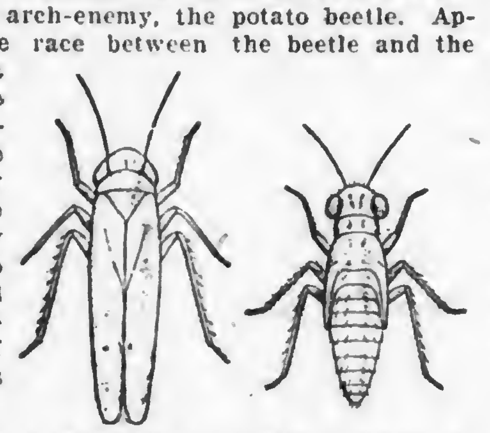
Another Enemy Threatens the Potato

The Leafhopper Is Fast Gaining Ground in Its Race with the Potato Beetle

By H. ROY DENMAN

IN AN article published in 1922 the writer mentioned the probable necessity of a more concentrated attack upon the potato leafhopper. The present undercurrent of opinion relative to this insect precludes any doubt as to the menacing frequency and increasing seriousness of the damage caused by the hopper. Since the early eighties, periodically, serious outbreaks have occurred, and about 1900 it was generally recognized that the hopper had become dangerous.

The economic importance of this pest has developed so rapidly that it now stands second only to our arch-enemy, the potato beetle. Apparently the race between the beetle and the hopper is a losing one for the beetle, as the hopper is by nature more cleverly equipped to withstand the onslaughts of man and his nostrums.



Leafhoppers magnified many times. Only the adult has wings.

The potato farmer has for a time been battling the ravaging beetle. This battle is a yearly occurrence, but the former indefinite appearance of the hopper led to a false sense of security. Then again, the damage caused by the hopper was attributed to dry weather, and called tipburn, the inference being that dry weather caused some physical disturbance within the leaf which made it turn brown at the tips and edges. Furthermore, the adult and young of the leaf hopper are likely to be present in greatest numbers during the period when dry weather prevails. Thus it can be seen that the hopper was working behind a screen, unnoticed and therefore surviving.

The adult leafhopper (also called apple leafhopper) is a winged insect, pale green, about one-eighth inch long, with large white eyes, and six roundish white spots just back of the head. The presence of hoppers in the field is readily noted: upon being disturbed they fly from the vines, resembling a flight of small white moths. They can be closely observed if one remains quiet for a few minutes after the flight. While they attend strictly to their business of banqueting on the under side of the leaf, they will now and then saunter around looking for new fields of endeavor.

The nymph, or young hopper, is wingless, smaller than the adult, and without the green tinge. When nearly mature they are very lively and hop from leaf to leaf.

After feeding upon young apple trees early in the season the hoppers migrate to the potato vines as they appear above ground. Adults and nymphs are equipped with a very delicate beak with which they suck the sap of the leaf. Because of this delicacy in attack there are no evidences of gross chewing or puncturing of the leaf, and it is this lack of visible evidence that has enabled the hopper to escape the suspicion of the grower.

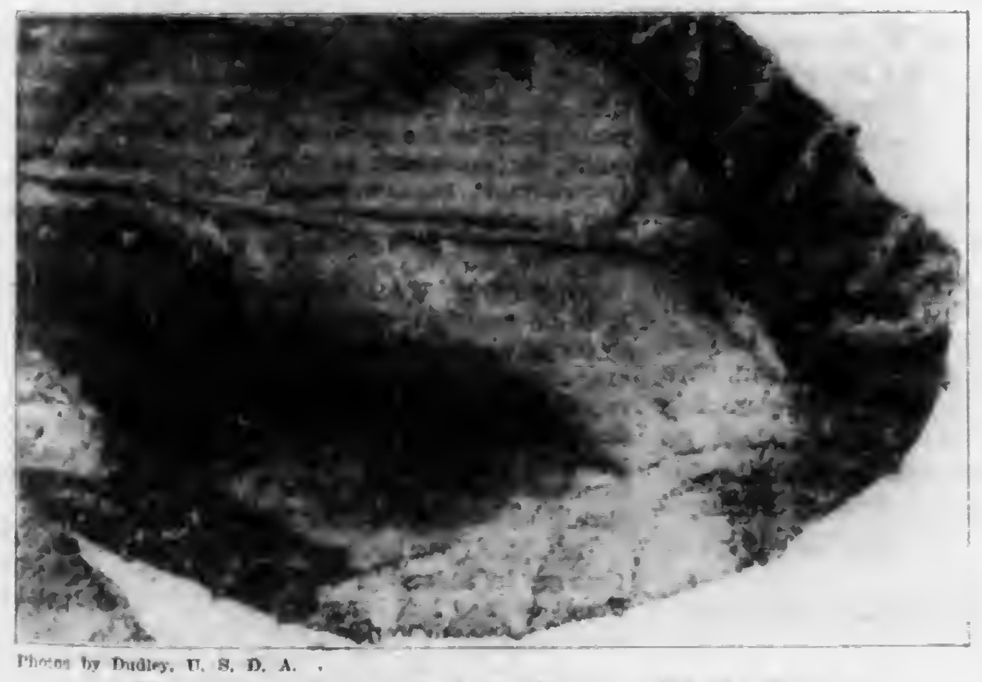
The potato beetle, in the larva or grub form, chews the leaf, and the flea-beetle punctures the leaf, hence the proof against these two is visual. When great numbers of hoppers are present the effect is seen in the premature wilting of the plants. This is the first injury.

When the eggs are laid they are deposited in the skin of the leaf. These eggs are so tiny and transparent they cannot be detected from the outside. When the eggs hatch some mysterious secretion seems to develop which causes the leaf tissues to die, and small, sunken areas dot the leaf. This is injury number two.

For the final sleeping potion the hopper proceeds to poison the plant with what is indefinitely known as "hopperburn." To determine just how much of a wallop this hopperburn could pack, one leafhopper was put in a cage and placed over a healthy potato plant. Some days later the cage was removed and there was the deadest plant ever seen. It looked as tho it had been struck with every bolt of lightning since the time of Adam. Other caged plants kept free from hoppers came thru in top form. The early symptoms of hopperburn are not peculiar to itself. There is merely a slight yellowing and curling at the tip and margin of the leaf, the area eventually turning brown when the tissues die. These symptoms might be attributed to a few other diseases.

Spreading from the tip and margin to the mid-rib and leaving the basal portion of the leaf to remain green is another symptom. At this time we have a stunted plant, brown, curled leaves showing a green base. However, the certain indicator is the presence of a multitude of small, pale-green insects hopping and flying about the plants. It is hardly necessary then to look for the disease, for when you see a leafhopper you also see the disease, for this disease of hopperburn cannot be carried by air, water, man or beast.

While the usual Bordeaux mixture of 5-5-50 will give some control when applied as it usually is, that is, on top of the vines, it will give excellent control when applied to both top and bottom of the leaf. Pressure at 200 pounds is essential. As a matter of fact hopper control calls for a most exacting application. Nicotine sulphate added to the Bordeaux at the rate of one pint per 100 gallons will give quicker action but the additional expense is to be considered. In the eastern potato sections the first application should be due about the latter part of June, and the second application ten to fourteen days later. Ordinarily, the potato farmer who sprays five to six times per season and sprays correctly will have no need to worry about hopperburn.



Photos by Dudley, U. S. D. A.

This isn't a diseased leaf. Leafhoppers did the damage.

A potato field following a severe attack by the leafhopper.

During the summer of 1921 the writer had charge of a large potato operation in Lehigh County, Pennsylvania. A small section of a twenty-five-acre field was retained for experimental purposes. This plot did not receive Bordeaux mixture. The leafhopper was first noticed in the middle part of June feeding upon the unsprayed area. Attempts to locate hoppers on the adjacent sprayed field were failures.

In July the unsprayed portion was appreciably lighter in color as compared to the main fields sprayed with Bordeaux. In early August the symptoms of hopperburn were evident, and at the end of the season it was noted that the unsprayed area died off five weeks earlier than the sprayed fields.

Imported Clover Seed

DURING the past few years France, Germany, Poland and the United Kingdom have supplied from ten to twenty per cent of the red clover seed sown in the United States.

Tests, in which foreign seed was compared with that from domestic sources, were started at the Pennsylvania State College in 1916-1917 to determine whether the imported seed could be grown satisfactorily in Pennsylvania. The tests were continued in 1921 to 1925 and the following conclusions have been drawn from the results:

"From our present knowledge we believe that in parts of Pennsylvania well adapted to red clover, the French, north European, and Chilean seed will give as good average yields of hay as domestic seed. However, in the years in which winter injury is severe the clover from American-grown seed will likely prove more hardy."

The most disturbing truth is better than the most cherished illusion.—Lothrop Stoddard

Farm Relief Bills

THE latest news is to the effect that the administration at Washington has consented to the inclusion of some form of government financial aid in disposing of surplus farm products. The plan includes the advancement of money up to $100,000,000 to coöperative organizations to finance the handling of surpluses. While this is not all that the more radical of the Corn Belt farmers have been demanding, it is considered as more or less of a surrender on the part of certain administration leaders. Farmers in the East have been luke-warm, if not actively opposed to the propositions which have been put forth recently to solve the surplus problem. Of course, the new scheme is not yet law and it is probable that a bitter fight will be precipitated when it comes before Congress.

Drastic Corn Borer Method

WITH the passing of the winter months, the campaign against the European corn borer in northwestern Pennsylvania opens in earnest. The only known method of controlling this highly destructive pest is to destroy all infested corn stubble, stalks, etc., early in the spring before the insect becomes active. Corn growers in the infested area of the state have been warned to destroy all corn crop remnants before May 15th. Instructions which have been issued by the State Department of Agriculture seem drastic, but the destructiveness of this enemy of the king of grains certainly warrants drastic measures.

The section of Pennsylvania which is now within the corn borer quarantine area includes Erie, Crawford, Mercer, Venango, Lawrence, Warren, Forest, McKean, Potter, Elk, Cameron, Clarion, and parts of Butler, Armstrong, Jefferson and Clinton Counties. The seriousness of the situation in this territory, considering the possibility that the borer may spread to the more important corn growing counties of the eastern and southern parts of the state, is fully recognized by those who have seen examples of its ravages.

Secretary Willits has been authorized to use a part of the Department's emergency insect and disease fund to help carry out the clean-up campaign this spring.

Luther Burbank

THE passing of Luther Burbank at his home in Santa Rosa, California, ended the career of the most widely known plant breeder in America. For more than a quarter of a century he devoted himself to studying the laws of plant life, and his knowledge enabled him to perform wonders in the way of combining and modifying tendencies, and in creating new species. The public, not understanding that his work was based upon scientific knowledge of plant life, insisted upon calling him a wizard, a term which he disliked all his life. There was nothing of the magician or wizard about him. He simply applied the laws of nature and worked with them. After a disappointment in a love affair years ago, Mr. Burbank turned his attention to the study of plant life and so engrossing did he find it that everything else was dropped and he became the world's leader in this work. His announcement, made a few weeks ago, that he had become an infidel in religious belief created a sensation and the thousands who wrote him advising, protesting and censuring, unwittingly contributed to his death it is said. He was seventy-seven years of age.

Voting in Philadelphia

THIS morning we turned off the street into a dirty alley in the center of Philadelphia, almost within the shadow of City Hall tower. Walking quite a distance up this alley between a row of billboards and a vacant building plastered with burlesque theatre posters, we came to a dingy, three-story building which was once a saloon,—and possibly is still used for the same purpose. On the side of the building was painted a large sign, advertising So-and-so's beer. The word "beer" showed dimly thru the coat of paint that had been spread over it when prohibition came.

We pushed open a door next to the barroom door and stepped into a long, dimly lighted hallway, which reeked with the fumes of what the anti-prohibitionists call "the real stuff." At the rear end of this hall was a stairway, and at the top we found a door, opening into a large, bare room. At the far end of the room was a long table. Behind the table sat three men, of the type you would expect to find in such surroundings, and one woman.

One of the men pointed to a chair and we sat down. He asked some questions, administered an oath on the open Bible, and told us to take the chair in front of the other two men. They had large books in which they entered our name, age, occupation, weight, height, color of eyes and several other bits of information.

That was all. We retraced our steps down the creaking stairs, out thru the smelly hall, and down the littered alley to the street.

We had performed our duty as a citizen. If we had not gone thru the ceremony in that dingy room over a back-alley saloon, we would not be qualified to vote in the coming primary election. On May 18 we shall go back to that saloon and cast our ballot for candidates for the governorship of Pennsylvania and the United States senatorship.

Land Prices and Farm Income

INVESTIGATION shows that there is a slight advance noticeable at the present in the price of farm land and in farm incomes. The high peak in both was reached in 1920. Between 1920 and 1922 farm incomes slumped rapidly and far, but they began to climb steadily back. The price of farm land dropped more slowly but continued downward to the end of 1925. The rise in farm incomes since 1923 has evidently caused a reaction in land values and is pulling them up. The ratio between the two has not been consistent. In other words, farm incomes are not reflected quickly in land values. If writers and economists would devote more time and space to the consideration of production economics and less to the treatment of land values it would be better for agriculture and all concerned.

As a matter of fact, the steady home-owning farmer has little interest in the subject of land values and gains nothing by the advancement in price. On the contrary, he loses, because he pays more taxes on the higher valuation. The price of land has no influence upon the amount of money received from the crops produced.

Roadside Markets

THE marketing officials of the eastern states met recently in Baltimore and considered the question of roadside markets. One of the speakers was Mr. Andrew S. Phillips, president of the Roadside Stand Association, of Massachusetts. He stated that more than a million dollars worth of produce is being sold each year in his county at roadside stands. Because of the practice of men who go into the wholesale markets and buy their stuff, then go out and pose as farmers, it is necessary, he said, for farmers to organize in order to save the roadside marketing business. This question is one which should be considered by producers in every section where roadside stands are prevalent. Such an organization could, by the adoption of rules, standards and practices, develop the business into one which could be distinguished easily by the traveling public from the "gyp" huckster who drives out into the country with a load of produce and sets up a stand. The assistance of state marketing officials can easily be obtained and they are glad to assist. Modern travel and good roads, coupled with the ever present desire to get fresh fruit and vegetables, make roadside marketing a great and permanent possibility, and it must be saved for and by those to whom it properly belongs.

Washington Letter

HEARINGS ON STANDARD CONTAINER BILL.—No opposition to the Perkins standard container bill developed at hearings on the proposed measure before the House Committee on Coinage, Weights and Measures, April 9th.

The Perkins bill provides that the standard hampers and round stave baskets for fruits and vegetables shall be one-eighth bushel, one-fourth bushel, one-half bushel, three-fourths bushel, one bushel, one and one-half bushel and two bushels; that standard splint baskets for fruits and vegetables shall be the four-quart, eight-quart, twelve-quart, sixteen-quart, twenty-four-quart and thirty-two-quart basket, standard dry measure. It will be unlawful to manufacture or sell such containers which do not comply with this act.

ODD SIZES WASTEFUL AND DECEPTIVE.—It is an economic waste and conducive to fraud to continue use of the many odd sizes of containers, declared Chester H. Gray, Washington representative of the American Farm Bureau Federation, who conducted the hearings for the proponents. He said there was a feeling among farmers that fruit and vegetable containers should be standardized to prevent fraud.

A. M. Loomis, representing the National Grange, in indorsing the bill, said that the National Grange had long advocated federal legislation to promote honest merchandising.

It was shown by E. R. Taylor, director, Bureau of Markets of Pennsylvania, that fourteen-quart and twenty-eight-quart hampers were in general use in Pennsylvania cities, for half-bushel and

bushel containers. And they are used for purposes of deception. Owing to the present lack of standards, there is much confusion among purchasers of fruits and vegetables because of the many sizes of containers.

IN THE INTEREST OF AGRICULTURE.—The House has passed several bills of considerable importance to agriculture. These included the Ketcham bill providing for the expansion of the foreign service of the Department of Agriculture; an amendment to the packers and stockyards act of 1921, so as to require every stockyard owner and market agency to furnish reasonable stockyards services upon request without discrimination, and the bill authorizing the Secretary of Agriculture to inspect and certify as free from disease and insect pests, domestic fresh fruits, vegetables, seeds, and nursery stock, and other plants for propagation when offered for export.

WORLD POULTRY CONGRESS.—Joint resolutions were adopted for United States participation in the third world poultry congress, at Ottawa, Canada, in 1927, and amending the plant quarantine act so as to allow the states to quarantine against shipments, therein or thru, of plants, products, and other commodities found diseased or infected when not covered by federal quarantine.

NEW WHEAT LAND.—A large increase in new land in wheat is reported in the Southwest. Two million acres of newly broken land in northwest Texas, western Oklahoma and Kansas, and eastern New Mexico and Colorado has already been seeded in wheat. It is predicted that by another year 10,000,000 acres of new land will be broken for the first time and seeded to wheat in this area.

The work of breaking and seeding is done by the latest improved machinery, such as is employed on the Pacific Coast. This development is mostly by large land holders and companies that have been recently organized for the purpose of developing the new wheat areas.—E. E. Reynolds.

Harrisburg Letter

DAM SUPERVISION PLANS.—Inspection of scores of dams thruout Pennsylvania, which has just been announced as the spring program of the Water and Power Resources Board, is planned as another move to make certain of the strength of all such works. This year the engineers in charge will look over every small mill or individual power plant dam with the same care as the larger affairs. In a number of instances dams inspected last year, and on which it was proposed improvements should be made, will be visited again. From what is outlined at the Capitol the inspection of dams is on a more comprehensive basis than ever known before. Incidentally, the inspection will be extended to a number of water supply areas as study is being given to allocation of territory.

RURAL POWER APPEAL.—Papers in the state's end of the appeal to the Superior Court of the electric interests from the rural power regulation of the Public Service Commission will be entered in a short time and it is possible an attempt may be made to have argument heard this spring or early summer instead of waiting until fall. Numerous inquiries are being made at the Commission offices as to effect of the appeal and a statement will be made on the subject in a short time. Governor Pinchot has virtually given notice that he will present electric regulation to the next legislature as part of his final recommendations.

COOPERATION IN FIELD.—All of the field forces of the State Police, Game, Fisheries and Forests and Water Departments have been linked up for enforcement of the fishing, fire protection and pollution laws this spring. This scheme has been working out for several years and this year opening of the trout season has given opportunity to make it effective. The state now has more fire towers in service than ever before and there are many miles of telephones hooked up with elaborate arrangements for summoning men to fight fires. Thus far the state has had few forest fires.

WHEAT OUTLOOK. — According to statements gathered in various sections of the big wheat producing counties the crop prospects are generally favorable in spite of some pessimistic predictions made the early part of the month. In some sections reported damaged the stalks have been found in fair shape and well rooted altho the snowfall was below the normal in the southern and central counties where grain is extensively grown.—Hamilton, Harrisburg.

New Jersey Letter

NEW MOTOR VEHICLE LAWS.—Motor vehicles and motor drivers are the subjects of various new laws. The statute against drunken drivers is tightened. The lawful width of motor vehicles is limited to eight feet. So-called "roadside" courts by Justices of the Peace are prohibited. The Department of Motor Vehicles is created as a separate department and taken away from the Department of State, W. L. Dill being placed in charge as the Commissioner by legislative appointment. Municipalities are authorized to name certain streets as "thru" streets upon which vehicles have the right of way over cross streets. Reckless driving is defined and procedure specified.

GOOD FRUIT YEAR IN PROSPECT.—Orchardists in central and southern New Jersey report the fruit crop saved so far as late frosts and freezes are concerned. Blossoms are later in appearing than in many years. By mid-April plum blossoms in the southern part of the state had barely begun to show. All of the other fruit trees will not be in full bloom until the latter part of May or three or four weeks later than in some recent seasons. Peaches and cherries will not be in bloom until the latter part of April. Growers report the prospect of bumper crops of all fruits and claim the hard winter has reduced considerably the damage from fruit tree pests. Practically all of the commercial orchards are now pruned.

SOMERSET GUERNSEY HERD.—A purebred Guernsey cow owned by Mrs. Frances K. Stevens of Gladstone has just completed a yearly advanced registry record in Class A (five years and over) with a production of 8968.2 pounds of milk and 418.5 pounds of butterfat. The animal is named Stonehouse Lustre and is registered as No. 66369 by the American Guernsey Cattle Club. The state association in calling attention to the record quotes the average production of milch cows as 4000 pounds of milk and 160 pounds of butterfat.—B.

New York Letter

MILK PRODUCERS SEEK HARMONY.—The committee of eleven, consisting of two carefully chosen representatives from the five leading groups of dairymen of the state, with Peter G. Ten Eyck, of Albany, president of the State Federation of Farm Bureaus, as chairman, have held their first meeting, and will meet again in Albany on May 4th. No action was taken, but all expressed satisfaction at the harmonious expression and handling of divergent views. All feel confident that ultimately a harmonious unification will be worked out.

JUVENILE GRANGE POSSIBILITIES.—Florence Auchter, the new state deputy of juvenile Granges, recently organized three juvenile Granges in Yates County, one of the smaller counties of the state. She finds rural boys and girls are thoughtful and attentive and eager to accept office, and to do their work in the best manner, according to accepted parliamentary usage. Each rural community should have some one of these forms of training schools for the young and no adult can do better service to his community or make wiser provision for the future than to foster and persistently support such activities.—M. G. Feint.

In the
Goodrich Line
You'll find the Right Tire
Priced Right!

GO to your Goodrich dealer. He will show you every type of tire for every kind of service. He will show you the right tire for your purpose—*priced right!*

If it's a Goodrich you are assured 100 per cent returns in service on each dollar you spend.

There's no gamble with any Goodrich tire. Every one you buy is built with the same wonderful construction principles as the famous Silvertown. You can absolutely depend upon its quality.

All Goodrich tires, to-day, are cords. Goodrich has concentrated all its vast resources and manufacturing facilities in building cord tires, only. The result is a matchless line—dollar for dollar.

See your Goodrich dealer. Learn what Goodrich service can mean to you. At the price you want to pay, you'll get a better tire. That is economy!

The "E-Z" Shock Absorbing Seat Spring

will make the farm machines, TRACTORS, etc. ride EASY. It absorbs the SIDE-shocks that are so injurious to the Spine and nervous system. Fits any machine. Satisfaction guaranteed or money refunded. Hundreds of unsolicited testimonials from pleased users. Delivered by parcel post for $4.00. Send for circular. Agents wanted.
GEO. J. KRUM, OLD CHATHAM, N. Y.

"Get out o' here!"
—that's what seed corn, when coated with Stanley's Crow Repellent, says to crows and pests

and they do GET!

You don't have to plant twice as much seed, sort o' feeling that crows will pull up half of it. You don't have to put up scare-crows, and then keep a shot-gun handy to kill off the crows that have built nests right in the scare-crow's coat pocket. No sirree; you just buy a can of

Stanley's Crow Repellent

then mix it thoroughly with the seed corn, and plant it at once. No waiting for it to dry. And it positively will not clog the planter! Non-poisonous. Won't injure the seed. Won't kill birds or animals. BUT,—it WILL keep them out of your fields, absolutely. It WILL save you all loss of time and expense in having to replant. It WILL let you get 3 bushels of corn where now you've been getting only 2. Because, no crows, moles, gophers, chucks or squirrels will touch any seed corn, nor the young sprouts, that have been coated with Stanley's Crow Repellent. And thousands of corn-growers will gladly testify that it does all we claim for it. "Money Back" guarantee. Large can, enough for 2 bu. of seed corn (8 to 10 acres), $1.50. Half sized can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, order direct. Address, Cedar Hill Formulas Co., Box 500R, New Britain, Conn.

Beat it, Maria, beat it quick!
Gosh all Hemlock
Wow wow
Seed coated with Stanleys Crow Repellent

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

IF ONE were limited to writing current news of spring work being done it would require little space to tell all that is accomplished so far this season. Compared with average years, vegetation is far behind in development. As this is written, (April 12) buds have barely begun to swell and grass shows green only in favored spots. While it may all be for the best in the long run, the forehanded person begins to have an impatient feeling when he looks at the calendar.

✦ ✦ ✦

OF COURSE, everyone with a fairly good memory and an imagination in working order can always tell of a worse season. That helps to allay impatience. I have found two maxims which often help me over tight places. One is, "There is nothing so bad but that it might be worse," and the other is, "There is nothing so good but that it might be better." The first helps when things are going against you, and the other tends to steady one when he is inclined to get chesty over success. I believe it is a good thing to have a stock of sayings and maxims on hand while making the journey of life. After we get them firmly settled as a part of our mental equipment they will bob up in times of need and aid us in steering a straight course.

✦ ✦ ✦

SOME twenty years ago, while stopping at a homey hotel in Cambridge Springs I saw hung on the wall above the fireplace a motto which read: "I am an old man and have had many troubles; but most of them never happened." I have known many people who could say that of themselves. They are the confirmed worriers. If anything is not just as it should be, or if a possible mishap suggests itself to the mind, such persons let their imagination have free reign and the imaginary thing becomes for them a reality. A great many of the drawn faces and wrinkled countenances are made so by things which never happened. This does not mean that one should not perceive possible danger and strive to avert it, but it means the wasting of time and energy in useless worrying is a mistake.

ON THE other hand, there are a lot of adopted sayings and maxims which had better be forgotten. Lots of people excuse themselves from making any effort for themselves, or from taking part in public improvement work by such sayings as, "You can't change human nature," or "Everything will turn out for the best," or "It's none of my business." In practical affairs there are and have been many foolish but firmly accepted sayings. Some of them were half-truths while others are based entirely upon ignorance or superstition. I well remember whendairymen generally believed that corn chop was highly injurious to dairy cows.

✦ ✦ ✦

IT USED to be firmly believed that salt was extremely poisonous to hogs and chickens, hence none whatever was given them. This is one of the half-truths. Salt given them in quantities such as other animals need is harmful and sometimes fatal; but salt in correct amounts is necessary for best health and development. Early growers of asparagus firmly believed that heavy applications of salt were necessary for best results in growing asparagus. Experiment has shown that little or no benefit follows its application. Planting potatoes and garden truck, setting fence posts and laying roofs, killing meat animals and weaning calves, used to be done and gauged by the moon. In fact, so firmly established are some of these ideas that I could possibly arouse considerable controversy if I should dispute the idea today.

✦ ✦ ✦

WELL, I have about filled my space this week and have said nothing about the work done at Neshaminy Gardens. Here is the reason for the above screed: The space must be filled and there has been so little done at the Gardens that it can all be told in three lines. We have pruned the grape vines and some of the trees, sown cabbage and tomato seed and have done some cleaning up. These, together with making the season's plans, have been sufficient to fill in all the decent weather we have had.

THE CHEERFUL PLOWMAN

Graded Eggs

AN EGG was an egg in my grandfather's day, no matter the color,—brown, tannish, or gray, no matter if speckled in slovenly way! An egg was an egg regardless of size, big, middle-sized, little,—the dull and the wise accepted an egg without questions or whys! An egg was an egg regardless of form, no matter if wrinkles appeared in a swarm, no matter if warped like a shirt in a storm! An egg was an egg with no queries in wait, while a dozen was twelve, and a crate was a crate,—yes an egg was an egg at that earlier date! But now, we've advanced and I say it with zest, and an egg is an egg when it's built at its best, and an egg is an egg when it answers the test.

An egg is an egg in my day (am I right?) if it and those with it are perfectly white without a dark spot or a freckle in sight. An egg is an egg if it's perfectly browned with no other color eye-spying around, if all its companions in color are sound! An egg is an egg in this latterly day if built in a large and a generous way, with no little urchins beside it, I say! An egg is an egg if it's smooth on its shell, if it's handsomely groomed and it's manicured well, if it's comely and trim as a dinner-time bell!

Each egg is an egg that I pack in a crate, and like its companions in color and weight, as plump as a plum and as white as a plate! Each egg is an egg that I'm shipping today, an egg not an egg is put out of the way, —an improvement indeed on my grandfather's day!—J. Edw. Tufft.

Border Planting

GOOD foliage, form, size and a continuous display of bloom are important considerations to bear in mind when choosing plants for the shrub border.

As a rule, the larger shrubs are used in border planting. Whether these tall shrubs are of the stiff, upright habit of growth, exemplified in Hibiscus, Silver Bell, etc., or of a more spreading character, as the Bush Honeysuckle, Japanese Snowball, or High Bush Cranberry, depends upon how and where they are to be used. The more upright shrubs are best in the background, especially in the angles of the shrub bed, with the lower-growing shrubs, such as Japanese Privet, Snowberry, etc., in front to hide the stiff and often "leggy" appearance of the background shrubs.

At other places in the border where an effect of height and breadth is wanted, tall, widespreading shrubs, such as Tartarion Honeysuckle, Plum-leaved Viburnum and Cranberry Bush, should be planted near the edge of the border. Alternate-leaved Dogwood is a splendid shrub for such places.

May Hide Unsightly Buildings

The border planting may also serve for a screen to shut off an unattractive vista or to hide unsightly buildings, either on the grounds or on adjoining properties. A few good shrubs recommended for a combined screen and border are the tall-growing Bush Honeysuckle (Lonicera tatarica and the varieties of Lonicera bella), Tartarian Maple (Acer ginnala), Siberian Pea Tree (Caragana arborescens), Shad Bush, Angelica tree (Aralia japonica), Common Lilac, and the Privets.

The native White Pine and Hemlock are splendid for this purpose; they not only make an effective screen but their evergreen foliage and graceful habit of growth adds much charm to any planting.

Familiar examples of the type of shrub used as "facers" in the border are Slender Deutzia, Japanese Barberry, White Kerria, Snowberry, Van Houtte's Spirea, Thunberg's Spirea, and Golden Bell.

Lovely autumn effects can be gotten by planting shrubs whose foliage assumes colorful hues with the frosty days of fall; for example,—the glowing purplish-crimson tones of the Sumacs and Flowering Dogwood, the bright scarlet of Chokeberry, and the orange-red of the Barberries.

All Have Good Foliage

The Hydrangeas, Spireas, Viburnums, Dogwoods, and the Bush Honeysuckles (Lonicera in variety) possess in common this attribute of good foliage. Such plants as the Purple-leaved Plum, Golden Privet, Japanese Maple, etc., should be omitted in plantings on areas of small extent, and if used at all should be planted as single specimens. Plants similar to the Loniceras, Spireas, etc., with their less conspicuous foliage color, blend in more harmoniously with the surrounding landscape, thus tending to make the grounds look larger than they actually are.

A comparatively small number of different varieties, say six to ten, planted in fairly large groups of each variety, will produce a more harmonious effect than a "spotty" planting of two or three of twenty or more varieties scattered indiscriminately about the edge of the lawn.

Small flowering trees, such as the Pink-flowered Dogwood, White Fringe, Flowering Cherry, Flowering Almond, etc., can be planted to good effect in the border. The Dogwoods, White Fringe and Hawthorns might make better lawn specimens, for they need plenty of room for proper development, but the Flowering Cherries and Almonds are excellent in border planting.—Mary C. McGovern.

Spring's Work *and* McCORMICK-DEERING

Showing McCormick-Deering 15-30 Tractor and Little Genius 3-bottom Plow

SPRING'S WORK is swift and efficient when McCormick-Deering Tractors, Plows, Tillage Tools, and Seeding Machines are taken out on the fields. The ample power of these tractors and the quality and broad scope of the attached implements assure full use of valuable Spring time and the maximum saving of expensive labor charges. The burdens of production costs are kept down, giving you that early advantage toward profit, and the quality of the work adds appreciably to crop yield.

Then, when the seed is in the soil, the extreme versatility of the McCormick-Deering Tractor carries on throughout the year.

These tractors, besides being always ready for field and belt work, have the power take-off feature for running the mechanism of binders, corn pickers, and other field machines. They are equipped with throttle governor, adjustable drawbar, wide belt pulley, platform, fenders, removable lugs, brake, etc. They have removable cylinders, unit main frame, and ball and roller bearings at 28 points. They come to you complete—no extras to buy. They have plenty of power and long life. Made in two sizes, 10-20 and 15-30 h. p.

Now, with the full producing season ahead, see this popular tractor at the McCormick-Deering dealer's. Sit in the seat at the wheel to get the effect of running it yourself. The dealer will demonstrate the tractor at the store or at your home. We will be glad to send you a catalog.

INTERNATIONAL HARVESTER COMPANY
606 S. Michigan Ave. of America (*Incorporated*) Chicago, Ill.
93 Branch Houses in the U. S.; the following in Pennsylvania Farmer territory— Elmira, Harrisburg, Philadelphia, Pittsburgh.

Plows
McCormick-Deering P & O and Chattanooga—all types walking plows and middle-breakers, steel and chilled. Two, three, and four-furrow moldboard and disk tractor plows. Sulky and gang, moldboard and disk riding plows. Orchard and vineyard plows. Special plows for every purpose. All standard types and sizes.

Tillage Implements
McCormick-Deering Disk Harrows in seven sizes, with or without tandem. Special orchard disk and reversible types. Tractor disk harrows. Spring-tooth harrows, eight sizes. Peg-tooth harrows, 25, 30, or 35 teeth to section. Wood-bar harrows. One-horse cultivators with 5, 7 and 9 shovels; also 7, 9, and 14 teeth.

Grain Drills
McCormick-Deering drills furnished in sizes 5 to 24 furrow openers; 4, 6, 7, and 8-inch spacing; all types of furrow openers. Press drills and press wheel attachments. Also fertilizer drills, beet drills, alfalfa drills, one-horse drills, end-gate and broad-cast seeders. McCormick-Deering lime sowers.

Dusting

Potatoes is today being recognized as the approved progressive practice

It has been adopted and enthusiastically recommended by leading growers everywhere because it has produced results. They know that because it was possible to make applications at the right time. Dusting has brought crops through to a clean, beautiful harvest—which would have been impossible with the old, slow, more cumbersome methods.

These growers almost to the man have Dusted.

THE NIAGARA WAY

Dusting the "Niagara Way" means that the growers are using

1. NIAGARA DUSTERS 2. NIAGARA DUSTS 3. NIAGARA SERVICE

1. NIAGARA DUSTERS "are made right, work right, and dust right." They put the Dust where it belongs in such physical condition that it will cover all exposed parts. They are so light you can get "in and over" even a hillside planting during those wet cloudy times when Blight comes to destroy your crop.

2. NIAGARA DUSTS are mechanically correct and scientifically accurate. They are processed at "Dusting Headquarters," the factory of the Niagara Sprayer Co.

3. NIAGARA SERVICE is a service backed by the Niagara Scientific and Extension Division—a service that teaches you When and How to Dust and What to Use. This service will make you an enthusiastic Duster—and add you to that big list of growers who no longer fear the ravages of Insects and Diseases

It will pay you, too, to dust the NIAGARA WAY

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

The Art of Controlling Insect Pests by Spraying

SUCCESS in spraying depends chiefly on two factors, timeliness and thoroness. By timeliness is meant applying the right kind of spray at the right time. As an aid to growers in this respect, spray schedules have been distributed by the different state experiment stations. You can get one from your county agent. The spray schedule, however, is merely a general or blanket recommendation, which may or may not fit conditions on a certain farm.

The time to spray depends on when the insects emerge, and when the spores of the fungous diseases are scattered. This varies greatly with local conditions. Many counties now have a "spray service," by which fruit growers are notified by telephone or mail just when to apply certain sprays. The recommendations of the spray service are based on local observations of the time of insect emergence and spore dissemination, made by entomologists and pathologists. The spray service makes spraying much more effective than by following a printed spray schedule, without regard to local conditions. See your county agent about the spray service.

Drench All Parts Thoroly

By thoroness is meant putting on enough spray, and in such a form as to completely cover the tree. Merely pointing the spray gun at the tree does not insure success. All parts of the tree must be thoroly drenched. Some men who spray fail to get good results chiefly because they do not apply enough material to do the job; they put two or three gallons of spray on a large apple tree which should have four or five gallons.

The effectiveness of spraying also will depend on the pressure with which it is applied. High pressure breaks up the spray into very small mist-like particles, which spread better. One hundred gallons of spray applied with a high power engine sprayer may be far more effective than 125 gallons applied with a hand pump at low pressure. This is why a power outfit soon pays for itself on any considerable number of trees.

Ninety per cent or more of orchard spraying in Pennsylvania and neighboring states is done with three materials—lime-sulphur solution, arsenate of lead, and tobacco extract (nicotine sulphate). All may be bought ready to dilute and use. In large operations, however, lime-sulphur may be made on the farm at a considerable saving. It should be bought on a guarantee test and diluted according to test. Lime-sulphur is the only spray material that is commonly used for two classes of pests. When used as a dormant or delayed dormant spray (as the winter buds are bursting) it is mainly a contact spray, for killing sucking insects, such as the San Jose scale. When used at a very much weaker strength, in the summer, it is a fungicide for the control of fungous diseases.

Satisfactory Sprays

Lime-sulphur and arsenate of lead are used almost exclusively for apples, pears and quinces. For the stone fruits, (peach, plum, cherry) which are more sensitive to injury by sprays (spray burn) weaker lime and sulphur sprays are necessary, such as self-boiled lime-sulphur, or dry-mix lime-sulphur.

Oil sprays, or red engine oil emulsion, are often used as a substitute for lime-sulphur, in the dormant or delayed dormant spray. They are superior to lime-sulphur in killing aphis and red spider, but inferior in controlling diseases, such as scab. The materials used in dusting are mainly very finely powdered sulphur, to which is added powdered arsenate of lead, commonly at the rate of eighty pounds of sulphur, ten pounds arsenate of lead and ten pounds of some kind of filler.

The equipment for applying sprays is determined by the number of trees to be sprayed. For the home orchard and for small commercial orchards of less than two acres, the barrel sprayer, with a hand pump, may answer the purpose fairly well. The gasoline engine power sprayer, however, is the only really commercial outfit. It costs from $200 to $800. The smaller power outfit will pay for itself on two acres of fruit trees, sometimes less.

The hose should be long enough to circle the tree. The spray rod, with one or two nozzles is satisfactory for small operations, especially with low power outfits; but the spray gun saves much time, and is preferable when the pressure can be kept above 200 pounds.

Dusters cost about half as much as sprayers, but cannot, as yet, be used to advantage for the dormant or delayed dormant treatment; hence dusting is of value chiefly to supplement spraying in the summer treatment of large orchards.

While the time of applying sprays is a local matter, and should be based, so far as possible, on local observations, the following are likely to be the most critical times and the most useful sprays for apples.

Useful Apple Sprays

1. DELAYED DORMANT SPRAY.—Apply just as the winter buds are bursting. Lime-sulphur diluted to test 1.03 (or dilute any standard solution approximately one to eight). Nicotine extract may be added for aphis at the rate of three-quarters pint to 100 gallons of spray. An oil spray may be used instead, with gratifying results on aphis and red spider. For peaches, however, apply this spray, while the buds are fully dormant or not yet opened.

2. PINK SPRAY.—When the blossoms show pink. Lime-sulphur diluted to test 1.008 (or dilute any standard solution approximately one to forty). Add three pounds of arsenate of lead to 100 gallons of this spray.

3. PETAL-FALL SPRAY.—Apply within three days after two-thirds of the petals have fallen. Repeat No. 2. It may be necessary to add three-quarters pint of nicotine to 100 gallons, for red bug.

4. CLUSTER-APPLE SPRAY.—Ten days after No. 3. Repeat No. 3.

5. SUMMER SPRAY.—About six weeks later. Repeat No. 4.

These, of course, are merely general suggestions; the best commercial growers in any county may add several more sprays to this schedule. The use of nicotine will vary with the season, depending on the presence of sucking insects.

For peaches, substitute dry-mix lime-sulphur for the lime-sulphur solution, in the summer treatments. In all cases supplement this very fragmentary outline of the subject with the best advice you can get based on local experience.—S. W. Fletcher.

Small Fruits for Home Gardens

Plant Only Healthy Raspberries and Blackberries

THE culture of raspberries and blackberries has declined sharply in recent years, both commercially and in home gardens. This is due mainly to the ravages of a group of degenerative diseases variously known as yellows, leaf curl, mosaic, rosette and blue stem. Affected plants have yellowish mottled foliage and become stunted and unproductive. No remedy is known. The disease spreads rapidly, chiefly by means of a plant louse. Suckers and tips from affected plants carry disease.

The only effective control measure is to set perfectly healthy plants taken from berry patches that have been "rogued," or inspected by plant pathologists, and certified as disease-free. Very few nurseries have clean stock. Your county agent can put you in touch with sources of disease-free plants.

Black raspberry before pruning.

All the brambles require coolness and moisture, hence a heavy annual mulching with manure pays. A new planting should be made every seven or eight years. It will be easier to care for the berries if the rows are kept quite narrow, not over fifteen inches wide, and many prefer to keep the plants in hills three or four feet apart. It also pays to trellis the canes, either tying them to the wires of an upright grape trellis or confining them between two parallel wires fifteen inches apart attached to cross arms on the trellis posts.

To Prevent Dead Canes

Some winters the canes are killed to the ground, or part way. This can be avoided by bending them down in late fall while still pliant, and covering the tips with soil to hold them down. The Latham, a recently introduced variety, is very hardy. All brambles should have the old canes cut out immediately after pruning, but the treatment of the new canes varies with the species.

The young shoots of blackberry and black raspberry should be pinched back when about two feet high to make them branch; red raspberries are not pinched back. Recent experiments show that black raspberries require very heavy cutting back of the side branches in spring, leaving only four or five buds on each lateral. This forces the growth of the buds on the main cane, which produces the best fruit. The larger the number of buds the smaller the fruit. Severe heading back of the laterals reduces the number of berries but increases their size.

Same after usual pruning. This is not severe enough for best results.

The same is true of blackberries except a few varieties which have stronger fruit buds near the tips of the laterals than closer in. Unbranched red raspberry canes are merely headed back to a convenient height, usually about four feet.

Unlike the grape, the largest canes are most productive. At the Michigan Experiment Station canes three-quarters inch in diameter at the ground produce twice as much fruit as canes one-half inch in diameter. One of the best ways to handle brambles in the home garden is to mulch them instead of cultivating them. A heavy application of strawy manure or straw each year, deep enough to keep down weeds, keeps the roots cool and moist and is less trouble than cultivation. The new shoots push thru this mulch easily.

Cuthbert Most Commonly Grown

Among red raspberries, Cuthbert still is grown more than all others put together, tho subject to crown gall and not as hardy as Marlboro. A good succession, from early to late, is June, Perfection, Marlboro, Herbert, Cuthbert. The much tooted "everbearing" variety, the St. Regis, usually is disappointing. Under favorable conditions it produces a fair crop in the spring before Cuthbert, and possibly a very light crop in the fall on the new canes, with scattering berries thru the summer. Under unfavorable conditions, especially in a dry season, it is a rank failure, as is also the Ranere, which closely resembles it. Another highly advertised sort, the LaFrance, is not hardy, and is unproductive in this latitude. One of the most promising of the newer sorts is the Latham, a very robust, hardy variety, with fruit of good quality. It will be worth while, also, to test the Van Fleet, which is a hybrid between Cuthbert and a Chinese species developed by the United States Department of Agriculture. It is extremely vigorous, producing twelve or more canes that are eight to twenty feet long when the plants are two years old. It is hardier than the Cuthbert, very prolific, but the berries are only fair in size and quality. It roots from the tips, like the black raspberry.

The Snyder—a good market blackberry.

Purple Raspberry for Canning

The present varieties of purple raspberries, such as the Columbian, are so inferior in quality and unattractive that they are not likely to find favor in home gardens for dessert purposes, but are more vigorous and productive than the reds and are excellent for canning. Better quality purple raspberries are promised us by plant breeders.

A good succession of black raspberries, from early to late, is Kansas, Plum Farmer, Cumberland and Gregg. Blackberry varieties are so badly mixed in the nurseries that one can never be sure of getting true-to-name plants, but Early Har-

(Continued on page 11)

Last season thousands of farmers and home gardeners proved conclusively that

there's nothing like Pyrox for protecting plants against insects and disease

THEY found, as you will find, that the new improved Pyrox spray is even more effective as a combined insecticide and fungicide, more convenient to use and more stimulating to plant growth than it ever was before.

You'll like Pyrox because it's so easily prepared for use. Five minutes and you're ready to spray. Pyrox goes farther, *it sticks*, making frequent sprayings unnecessary.

It does its work more efficiently—killing insects and preventing blight more effectively than anything you've ever used.

Buy Pyrox in the five, ten or twenty-five pound drums You'll save money and time.

How Our Experts Work For You

IN a recent issue we called attention to the increased cost of feed resold to the users by special salesmen sent out by manufacturers for this purpose.

We called attention to this as we did to the high prices due to pooling feed orders, because we feel that we have only partly done our duty in making feeds. Our interest extends to you as a feeder and our policy is to give you all the assistance we can, to help you prosper.

When we called attention to what the specialty salesmen were costing, we promised to tell you of the men in our organization who give their time in looking after your interests—helping you to save money and make more money.

Who These Men Are

PROFESSOR J. F. LANTZ, a recognized authority on Animal Nutrition who gives personal attention to supervision of formulas and the ingredients used in manufacturing. The one purpose of Professor Lantz is to have the feeds make more milk at lower cost and keep cows in the best condition.

We make the same profit on good feed that we would on poor feed. We believe it is good business to have the feeds make you more money so that you can pay your bills, have something left and be back for more.

When not busy at the office Professor Lantz spends his time with dairymen checking results obtained with Tioga Feeds and comparing results with other feeds.

Nothing is taken for granted.

Mr. E. B. DORSETT for nine years an Institute instructor, has had a lifelong experience in feeding on his own farm. Before coming with us he was at the head of the Department of Markets for the State of Pennsylvania. There are few men as widely known among farmers as lecturer and advisor. Mr. Dorsett gives all his time helping you and other feeders with your problems.

Mr. M. L. ROGERS, a graduate of Cornell University, originally specialized in Poultry Husbandry in which he is a recognized authority. He later devoted himself to the subject of nutrition for all farm animals and is well qualified to help feeders with their problems.

The work of these three men backed by the policy of our company has turned many dairies from losing, to making money. We have never known of a case that did not show increased gain when Tioga Dairy Feeds and Tioga Mineral Food were fed as directed.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

On a Forty-Acre Farm

Would you kindly give me all the information you can in regard to dairying on a forty-acre farm. I have a fine farm of forty acres located in the best farming section of Mercer County. I repaired my buildings and painted and have them in fine shape. I intended to sell and buy a larger farm, but all I could see was years of work and money fixing up old buildings, so decided to stay on small farm and try to make dairying pay. I bought a silo for this year 8x36. What I want to know is does it pay to put up another silo for summer feeding and cut out pasturing altogether except pasturing second crop clover? I buy all prepared cow feed. I would like to keep ten cows or more. Kindly advise me if this would pay. I also would like to know about how much hay one cow will consume in a year feeding one bushel of ensilage at a feed.—W. R. T., Mercer County, Pa.

Whether it will pay you to eliminate pasture entirely, except the second crop clover, depends to a considerable extent on whether all your land is tillable or not. If you have some rough stony land you might much better use it for pasture than allow it to stand idle. On the other hand, if all your land is suitable for growing crops you might then eliminate pasturing to a large extent.

At the Pennsylvania State College we have no pasture for our dairy cows except that obtainable in a half dozen exercise lots about one-half acre each. Of course, the cows are out daily for exercise, but they get no pasture except small amounts picked up from the exercise paddocks.

Our herd is used primarily for student judging purposes. In addition to the students, there are a considerable number of farmers' judging contests and boys work with the herd. In the second place, the herd is used for experimental work. Experiments are almost constantly in progress dealing with the values of different feeds and different rations.

Production of College Herd

Several cows are usually dried up every year thru experiments of one kind or another, and some of the animals have died as the result of certain experimental work, yet in spite of these handicaps, the college herd of sixty-nine cows last year averaged 8548 pounds of milk and 342 pounds of butterfat for all ages and all breeds, including Holsteins, Ayrshires, Brown Swiss, Guernseys, and Jerseys. This shows that it is entirely possible to keep a herd in high state of production by the use of silage, hay, etc., the year around instead of pasture. It must be stated, however, that this method calls for more labor than the pasture method.

A new bulletin, No. 195, free for the asking at the Agricultural Experiment Station at State College, on the Development of Kentucky Blue Grass Pastures, gives evidence that the proper handling of a permanent blue grass pasture will probably turn off more feed than the same amount devoted to other forage crops.

A thousand-pound cow will eat from eight to ten pounds of hay daily besides a bushel of silage at a feed. This would mean about one and one-half tons of hay per cow yearly, if she is fed hay and silage the year around. Feeding is only half the battle in the production of milk at low cost. The cow herself is of equal importance.

There are good and poor cows of all breeds. It is important to get cows that are normally high producers. The only way to make sure of this is to keep individual records of production on each cow in the herd either by weighing and testing the milk yourself or by having it done thru a cow testing association.

Buy High Producing Cows

In the purchase of cows, it is always desirable to secure them from parties who have kept records, preferably thru a testing association. In this way you can know at the outset whether the cow is naturally a high producer or not. You can afford to pay considerably more for a high producing cow and still be ahead of the game financially as compared with paying a low price for a low producer.

The sire is also an important factor in profitable dairying. A purebred sire backed by high records of production is a prime essential. The use of such a sire can be secured most economically thru membership in a cooperative bull association. If one of these associations is not in operation in your community, it would pay you to get in touch with your county agricultural agent, who will gladly attend to the organization of such an association if the proposition is feasible in your community.—A. A. Borland.

Ayrshire Record Cow

THE Ayrshire Cow, Briery Lass, owned and developed by the Director, Canadian Government Experimental Farms, at Ste. Anne de la Pocatiere, Quebec, has just completed a 365-day record under the rules of the Canadian Record of Performance. This constitutes a Canadian world's record for the breed for butterfat production, producing 22,035 pounds of milk and 979 pounds of fat, average per cent fat, 4.44.

The former world's record Ayrshire butterfat producer was a United States cow, Lily of Willowmoor, owned by J. W. Clise, Redmond, Washington, with a record of 22,596 pounds milk and 955.56 pounds of fat.

During the making of this record, Briery Lass produced 110 pounds milk in one day and 3040 pounds of 4.2 per cent milk in one month. These also are world records for the periods of the breed. In addition, Briery Lass has a previous yearly record in her mature form of 16,047 which gives her an average of 19,042 pounds of milk and 786.5 pounds of fat for two consecutive lactation periods.

Organizations Unite

REPRESENTATIVE directors of the Pennsylvania Farm Bureau Federation met recently with the executive committee of the Pennsylvania Farmer's Cooperative Federation, Incorporated, to effect a union or consolidation for a year in order to buy feeds in large quantities. These two organizations, joining with the West Virginia Farm Bureau Federation, arranged to buy feeds of a western milling company.

The headquarters of this new service, or buying organization, will be in West Chester. The offices of the Pennsylvania Farmer's Cooperative Federation in the Heed Building, Philadelphia, will be closed for the present.—J. G.

TATTOOING HOGS

New Method Devised for Detecting Origin of Disease

DR. F. E. MURRAY, veterinarian of the United States Department of Agriculture has devised a simple method for placing tattoo marks on hogs so that they may be readily identified after slaughter. The principal need for such identification is for detecting the origin of diseased hogs found at slaughtering places and to trace the channels thru which infection spreads.

The form of the instrument considered most suitable for tattooing hogs consists essentially of a metal holder about eighteen inches long, slotted to receive five blocks of Babbitt metal in which phonograph needles are embedded with the points protruding about a quarter of an inch. The needles are arranged to form numbers and letters.

Automobile Enamel as Pigment

Ordinary black automobile enamel is used as a tattooing pigment. It is applied to the needle points with a brush. The mark is applied by merely striking the hog smartly with the instrument, usually on the fore part of the back. Tattooing causes no injury to the meat or inconvenience to the hogs.

A tattoo mark, properly applied, resists all attempts to remove it and, after death, is as permanent as the skin itself. It is a definite means of preserving the identity of hogs between farm and market. Extensive tests have demonstrated the practicability of the device in tracing the origin of animal disease and in identifying the ownership of diseased animals in mixed shipments. Numerous other practical uses suggest themselves, such as tracing the source of animal parasites, experimental work involving the study of dressed carcasses and identifying ownership in cooperative marketing.

Described in Bulletin

A description of the instrument, methods of using it, and various practical uses for such identification marks, are described in Miscellaneous Circular No. 57. A copy of the circular may be secured as long as the supply lasts by writing to the United States Department of Agriculture, Washington, D. C.

Small Fruits

(Continued from page 9)

vest, Eldorado, Taylor and Ward are good. A new variety, the Nanticoke, which originated in Maryland, ripens after other varieties are gone and has high quality.

Those who desire extra early blackberries will grow the Lucretia or Mayes dewberries, tying the long trailing vines to stakes. In southern New Jersey and southeastern Pennsylvania the Evergreen blackberry, which is much cultivated on the Pacific Coast, may be grown. It is not hardy and the canes may have to be lain down. It ripens in August and September. This variety is really a dewberry or trailing blackberry of remarkable vigor and productiveness. It should be grown on a wire trellis and the canes closely confined. It is especially valuable for canning.

Two Vital Problems

Two problems in blackberry culture are how to keep down the suckers and how to avoid the thorns. The rigid confinement of canes on a trellis solves the second problem. There are several varieties of so-called thornless blackberries but none is of much account. Undoubtedly the plant breeders will eliminate the thorns eventually.—S. W. Fletcher.

When They Go On Grass? What Then?

The Gospel of Good Feeding

Very soon your cows will go to fresh pasture. They like it and it stimulates them. It is good as far as it goes, but they cannot eat enough to maintain their condition and their full flow of milk on grass alone.

In 100 pounds of average pasture grass there is 3.7 pounds of digestible protein, but only 15.9 pounds of total digestible feed. That is not enough. Your cows would have to eat 150 to 170 pounds of grass a day. They cannot graze or hold 100 pounds.

The Voice of Authority

By Prof. W. J. Fraser, Illinois Experiment Station: "It would require 30 acres of pasture to support an ordinary cow. To graze this area she would have to travel 30 miles a day and have a muzzle two feet wide."

By Prof. Hopper, Kentucky Experiment Station: "I clipped 100 pounds of bluegrass and it filled three gunny sacks." A cow cannot hold this much grass.

Your cows will go right on making milk but they will not make it all out of grass. They will draw protein, fat and mineral matter from their own bodies to fill the milk pail. They will get poor, exhaust themselves, become unprofitable and go dry weeks or months before they should.

Give your cows a balanced grain mixture with their grass. Feed three to eight pounds daily per cow according to yield. Grass is laxative, therefore you should avoid laxative concentrates. The following ration is one of the best you can feed:

Corn Gluten Feed 300 pounds; ground corn 300 pounds; ground oats 200 pounds; wheat bran 200 pounds. Start this ration when cows go to pasture and they will go through the summer and into the fall—in fine condition and full production.

This Valuable Book Free

"The Gospel of Good Feeding" is a brand new book of 64 pages. It gives you the newest ideas on feeding. It will help you to make more money—day in and day out—summer and winter. It contains 28 rations for dairy cows, steers, hogs, sheep and poultry.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used for years in the big dairy country Sweden, and has cleaned up whole districts over there literally rotting with abortion. Frank Halfman, Crown Point, Ind., writes: "Two years ago, I lost every calf from my herd of forty cows. All remedies failed until I used yours. I have never lost a calf since."

C. C. C. (Cow, Calf, Control) is guaranteed to absolutely stop abortion or the treatment cost is refunded. Write today for full details explaining our free trial offer.

Simply send your name and address without further obligation on your part to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

A GOOD Stave Silo LOW in Price

Get a Crasco and you get a silo that's well made of quality materials. Years of experience behind it—experience in making superior silos such as the famous Craine Triple Wall.

And—for delivery before May 24th, you get a roof frame without charge. Why not have it? Write today.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 510, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Waterloo, Iowa,** for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Walker Remedy Co., Dept. 510 Waterloo, Iowa

One Drop of Bourbon Poultry Remedy **Cures Gapes**

A few drops in the drinking water cures and prevents white diarrhoea, limberneck, cholera, indigestion and other poultry diseases. Small size 60c, half-pint $1, full pint $1.50. At druggists, or sent by mail.

Internal Parasites and Treatments for Birds

(Continued from last week)

THE worst internal parasites of the fowl are the intestinal worms, which, if numerous enough, may cause death. It is only within the past few years that the importance of poultry worms has been fully realized. The New Jersey Experiment Station states that fully one-half of the diseased chickens sent in for diagnosis during the spring and summer are affected by worms. A light infestation means lessened production; a heavy one, emaciation and death.

Three kinds of round worms, two of which are a couple of inches long, and the other, only half an inch long, commonly infest fowls. They are often seen in the droppings. There is also a tapeworm, about five inches long when full grown, which is especially dangerous. Segments of these worms are sometimes passed.

Tobacco is commonly used in treating the birds for worms. If the infestation seems heavy, this is the treatment recommended by the New Jersey Station:

Mash Mixed with Tobacco Liquid

For each 100 birds, take one pound of finely chopped tobacco stems, and steep in enough water to cover them for two hours. Make a moist mash with the liquid and stems, using the regular dry mash. The birds should be fed lightly the day before, and starved on the day of treatment. This mash is fed at 2:00 P. M. It should be spread out so that all the birds can have access to it.

At 4:00 P. M. feed another moist mash with twelve ounces of Epsom salts dissolved in the water used to mix it. This treatment should be repeated in a week. It is advisable to remove all droppings and litter the next day after using this treatment and replace with fresh straw.

Birds so treated are liable to drop in their egg yield, but will later pick up. A milder treatment, when the infestation is not heavy, or for a preventive, is the use of two pounds of tobacco dust per 100 of mash, fed for a month. One pound is used for young pullets on range.

When but a few birds are to be treated, a teaspoonful of oil of turpentine, given before feeding in the morning, followed in three hours by a tablespoonful of castor oil, is effective.

The lye treatment, recommended especially for tapeworms, is outlined below.

Withhold food for a day. Mix one tablespoonful of lye with four quarts of whole grain. Cover with water, and let simmer for three hours.

In the morning, feed all of this that the birds will eat. Provide plenty of drinking water. At 4:00 P. M. give a moist mash, containing Epsom salts at the rate of one pound per 100 birds.

The gape worm is another internal parasite infesting the trachea of young chicks, causing them to gasp for breath. This small worm can be removed by a horse-hair loop.

Preventive Measures Important

Preventive treatment is important in dealing with worms. Frequent plowing of lots, with heavy liming, and use of a green crop will help to lessen the danger. I use a double yarding system, where the birds are pasturing off a green crop in one yard while another is growing in the second. This gives the ground a chance to sweeten up when not in use. My young stock have free range on a large grass meadow where the danger of infestation is very slight. Raising clean healthy birds in a little bare lot is a tough proposition.

Cleanliness inside the house is also a means of prevention. Litter and droppings should be removed at frequent intervals, and spread beyond the reach of the birds. Occasional use of a disinfectant is good. To keep the hens off the dropping boards where they are liable to pick up worms, two-inch poultry mesh can be tacked under the roosts, and fastened down at the back and front of the dropping board. This also keeps the hens from getting on the nests with dirty feet, and soiling the eggs.—R. L. Sharring-Hausen.

Brooder House Litter

ABOUT an inch of fine sand makes a good foundation for the brooder house litter. But the sand must be covered or it will become very hot around the brooder stove and dry out or blister the feet of the chicks. Alfalfa or clover chaff has often been used with good success as litter for the colony houses. It furnishes bits of green feed for the chicks and absorbs the dirt.

Some poultrymen have recently been advising bran for litter around the brooder stoves. They find their chicks eat too much hay or straw chaff with a resulting clogging of the digestive system. Bran is bulky material and if a 100-pound sack worth $2 will save the life of a few chicks it will be an economical litter.

Feed Them on Newspapers

It is only necessary to use bran for the first litter and after the first cleaning of the house the chicks will be larger and not so apt to fill up on bits of tough hay which may make them crop bound. Feeding the chicks on newspapers helps to furnish a clean feeding surface for the scratch grain. The papers can be folded to give a clean surface at each feeding. It is surprising how much poultry manure can be taken from the house on these feeding papers after they have been left before the chicks for a few hours.

On farms where sand cannot be obtained I consider it best to use only litter on the floor around the brooders. Grit can be scattered on the papers and placed in low hoppers. If garden loam is placed on the colony house floor it is soon turned to dry dust by the heat from the stove. This dust is constantly kicked into the air by the chicks. It seems to give them sore eyes and clogged nostrils and is unhealthy for the caretaker who must often enter the colony house.—R. G. Kirby.

Foresters' Field Day

THE Penn State Forestry Society will reenact the pioneer exploits of covered wagon days on Saturday, May 15, when the foresters plan to stage their first annual field day exercises. The program for the day will include rifle and revolver contests, endurance races over the mountains and streams, and other woodmen's competitions.—A. L. B.

A New White Diarrhea Tablet

Diarrhea among small chicks has become so prevalent that it has engaged the attention of our foremost men of science.

At the instance of Dr. Hess & Clark a group of veterinarians and chemists have made diarrhea in chicks a subject of scientific research.

These men have evolved an entirely new tablet for White Diarrhea—in fact, any form of diarrhea affecting poultry.

Dr. Hess & Clark are now manufacturing this new diarrhea tablet and placing it on the market this season for the first.

You will want this new tablet, which is the last word in medical science for White Diarrhea, either as a preventive or as a remedy.

You can secure this tablet from any Dr. Hess & Clark dealer. Ask for

Dr. Hess WHITE DIARRHEA TABLETS

Then follow these simple directions: Crush and dissolve just 4 tablets in each gallon of drinking water (one tablet to a quart). Stir once thoroughly, then let your chicks run to it; they will doctor themselves.

Make a fresh solution each day.

Our guarantee covers this tablet absolutely. DR. HESS & CLARK, Inc., Ashland, Ohio.

Avicol For White Diarrhea

In few hours, disease is stopped and sick chicks full of pep,

It's easy to stop losing chicks from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nearly every chick in every hatch, by this simple precaution.

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, will amaze you. Write for free sample, or send 50c for a full-sized package to **Burrell-Dugger Co., 673 Nelson St., Indianapolis, Ind.** It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

LAWRENCE P. UHL

THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO.

I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct, from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:

For quick action order from this advertisement in perfect safety. Reference: Duns or Bradstreet, Farmers State Bank. Free Catalog. If it is QUALITY you want try our Chicks this season before it is too late. Let us know your exact wants if you do not find it in this price list. I want your business and you may rest assured that I will take care of you RIGHT.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I have been reading the candy receipes closely and wish more girls would put more in their letters to put in the paper because I love to make candy. I'm going to give you a cake recipe.

BOOTH CAKE

3 eggs
¾ cup butter
2 cups flour
2 teaspoons baking powder
1½ cups sugar.—Reta Folk, twelve, Carroll County, Md.

Dear Cousin Ruth and Forum Friends:—We play ball at school. We had a lot of sledding this year. I liked it very much. We have a

FEEDING MY FLOCK
Emma R. Rupp, Lehigh County, Pa.

four-tube radio. It has a loud speaker. We have had as far as Los Angeles, Atlanta, Georgia; Florida, and Tennessee.—Hester Turner, Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a little calf only about two weeks old. I'll send you a picture of it later. I have three pet chickens. Here is a poem of mine:

SPRINGTIME

The bluebirds have homeward flown,
To spend another summer,
The robin with his breast of red
Is really a welcome comer.

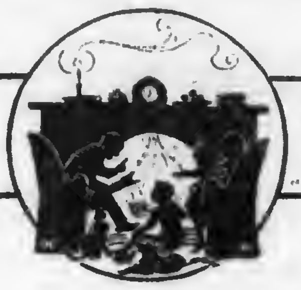
I love to hear them singing,
From the treetops high and low,
And see the grass come peeping
From beneath its coat of snow.

The children love to see it,
They can play the whole day long,
You can hear them all rejoicing
In some happy little song.

The school days they are over
Vacation time has come,
The boys go down to the good old creek
To have their share of fun.

The girls play with the baby-dolls,
Which are so cute and sweet.
In the evening you hear mother say
"Kids, be sure and wash your feet." — Rose McLafferty, (X), Butler County, Pa.

OUR YOUNG PEOPLE'S FORUM.



Dear Cousin Ruth and Forum Friends:—I wish you were with us when we boil syrup; I think you would be interested in it.

I like to help my father churn butter. My oldest sister has just come home for an Easter vacation. We have twenty pupils in our school. Our school is out May 5th.

My father goes to conference this week. We have a writing contest at our school April 24. I am going to take it.—Carolyn Schenk, ten, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—We are going to get a new consolidated school next year. A bond issue for the new school was up the first of last month and on March 16 a voting project was held and the bond issue passed by a vote of a large majority. We were all happy that it passed because we needed a new school so bad.

I am in the seventh grade. We have three cats and an Airedale dog whose name is Laddie Boy. I am sending you a recipe for a cake my sister bakes quite often and I think it is good.

ONE-EGG CAKE

1 cup sugar
¼ cup of lard
1 egg
2 cups of flour
2 teaspoons baking powder
1 teaspoon vanilla.

This can either be baked in layers or solid.—Virginia Jameson, twelve (X), Lawrence County, Pa.

Dear Cousin Ruth:—Now I can thank you for my pencil box. It just came yesterday when I was home to get it myself from the mailman. I like it all very much, and, anyhow, I could not use the skates now, as it is too warm.

We live so far from our school it is always five o'clock when I get home and half the way is up hill.

I thank you very much for the badge and my pencil box.—Annabel Bonzo, (X), Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—We have four geese and three ducks. The geese have laid fourteen eggs. The ducks are mine. My father bought a duck hen at my girl friend's place. My ducks have not laid yet. Here is a recipe:

ANGEL CAKE

Beat whites of eight eggs until frothy, add teaspoon cream of tartar and beat until stiff. Then add gradually while stirring one cupful fine sifted sugar. Fold in three-quarters cup flour mixed with one-quarter teaspoon salt sifted four times, three-quarters teaspoon vanilla. Bake in ungreased pan about fifty minutes.—Mildred Highlands, eleven (X), Cumberland County, Pa.

Dear Cousin Ruth:—I received the membership pin and thank you for it. I am sending you a picture of our family of children. My brothers, my sisters, and myself. My big brother and little sister next to the baby are not in it. We all are ready for play.

The weather feels as if it was spring and, oh, how glad I will be so all the little ones can go out again. Daddy made us a swing and some see-saws.

Mother is busy ironing and little sister is just waking up and I am going to take her out for a little fresh air.—Dora Linton, eleven (X), Montgomery County, Md.

WE ARE SEVEN
Dora Linton, Montgomery County, Md.

What glorious times you children must have together. Of course, you all help mother, I suppose, but after the work is done there must be lots of play time to enjoy.

COUSIN RUTH.

Robert Shoop,
Dauphin Co., Pa.

Paul Veon,
Beaver Co., Pa.

Dear Cousin Ruth and Forum Friends:—We have two horses, Nellie and Bill. Bill will open the barn door all by himself. For pets we have four cats and a dog. The dog's name is Rover. He will chase the cows, play hide and seek, ball and tag.

I go about every Saturday morning with my father. He has to take the milk four miles to the creamery. I expect to have a pony soon.—Ruth Cunningham, eleven, Susquehanna County, Pa.

Can You Guess These?

1. Why is a dog warmer in summer than in winter?
2. Why is a bad boy in school like a postage stamp?
3. What has a tongue but cannot talk?
4. Why is blind man's bluff like sympathy?
5. Why is a mouse like grass?
6. What goes up and down the hill but never moves?
7. Why is a dirty boy like flannel?

—Margaret R. Bushey, Adams County, Pa.

Three Recipes for Deviled Eggs

Dear Cousin Ruth:—We sure are having nice weather now. I saw robins yesterday by the dozens. It will soon be time to make a garden.

I saw by Pennsylvania Farmer that Mrs. Lillian Stout wanted the recipe for deviled eggs. Here it is:

DEVILED EGGS

Cut hard boiled eggs in halves, lengthwise; remove yolks, mash thoroly and add boiled salad dressing until moist enough just to hold its shape. Season rather highly with salt, pepper, celery salt, and paprika. Refill whites lightly, and arrange on lettuce leaves. You may vary the flavorings by adding to some of the mixture, chopped celery, olives, grated cheese or nut meats.—Mary Ellen Magee, fifteen (X), Franklin County, Pa.

Dear Cousin Ruth:—We have two farms. I like the farm and my best fun is to help in the hay field in summer. We have a milking machine so I don't have to help milk.

I saw Mrs. Stout looking for a recipe for deviled eggs.

DEVILED EGGS

Remove the shells from cold hard-boiled eggs, cut in halves and remove the yolks, put in a bowl, add pepper, salt, butter and vinegar to taste, mix it well with a spoon until smooth, then put the mixture back in the whites; fine for lunch.

Cut open six hard-boiled eggs and make the filling of the yolks. Mash fine with fork; add one teaspoonful of butter, one-half spoonful of sugar, pinch of salt and pepper and mustard to taste; add enough vinegar to moisten and fill the whites. A little chopped ham, lettuce, parsley or cheese may be added if wished. Serve on lettuce leaves.—Clara L. Vogt, Erie County, Pa.

Dear Cousin Ruth and Forum Friends:—I am living on a sixteen-acre farm with my mother, six brothers and one sister. I work in the house most of the time. I am glad I can help Mrs. Stout in her request for recipes. I am sending you a recipe for deviled eggs. I have tried some of the recipes on the Forum page and found them very good.

DEVILED EGGS

Boil slowly the desired amount of eggs for twenty minutes, this is to make them digestible. When cool remove shells. Cut into halves crosswise, take out yolks without breaking the whites, rub the yolks to a cream with a little melted butter. Add a little mustard or sauce from the chow-chow bottle, a little chopped pickle, salt and pepper to taste, put the mixture back in the whites of the eggs.

They are also good if the mustard or sauce and chopped pickle are omitted and chopped onion and vinegar are used instead.—Elsie Bish, fifteen, Armstrong County, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—Do you remember about the animal that carried the heavy life insurance? Well, when you have solved this week's puzzle, you will have the name of something that may some day prove fatal to that animal. You will notice that the words read across in this puzzle, and you will, also, see that one letter is missing from each word. Now think a little what the letter must be which will complete the word in each line, and when you have all of them you will have a word which is composed of the letters running from the upper left hand corner to the lower right hand corner of the puzzle. When you have found this word, send it to me on a POSTAL so that it reaches me by May 1st. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks have been very careless and have been making simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the April 3 issue of Pennsylvania Farmer is: A HAPPY EASTER TO ALL OUR LITTLE FOLKS.

The puzzle prize winners are: Herbert R. Adams, age 11, Centerport, Pa.; Isabel Elliott, age 12, New Alexandria, Pa.; John Farence, age 10, Dillsburg, Pa.; Elma Foster, age 11, Wiconisco, Pa.; Clarence B. Hollinger, age 9, Hershey, Pa.; Ethel Steinmaker, age 6, Rochester, Pa.; Marion I. Stradley, age 11, Wellsboro, Pa.; Velma White, age 13, White, Pa.; Roberta Wilson, age 10, Meshoppen, Pa.; Ruth Wilson, age 8, Meshoppen, Pa.

Have You Some Good Ideas?

Amusement and Instruction for Little Folks

I WOULD like to see a discussion of how to amuse and instruct a little child, under school age. Of course I have ideas, but I am always looking for more. It is too bad they don't have nursery schools all over the country, where little children can learn as fast as they are able, under direction of a good teacher, who understands little children better than many mothers.—Mrs. Doris W. McCray, Iowa.

For fourteen years while teaching six-year-olds in city schools where kindergartens were not connected with the school systems, I wished I could tell mothers just a few things to teach the little child before his first school morning in September. I can advise you today with no "fear and trembling" for I have linked with this teaching experience, that of being a mother, and I hope we may have a very worth while discussion of this big business so near the heart of all mothers.

The First Lessons

First, teach the little one, the very little one, habits of cleanliness, sanitation and health. Most children at the age of two will happily take care of their own noses if pockets adorn their clothing and interesting kerchiefs are always at hand. I used to spend two dollars monthly for gauze to equip children who came to school without this necessity. The first cool day found me teaching this form of sanitation which mother should have started at the baby's cradle.

They should have learned long before school age to avoid public drinking cups and public towels and wash cloths. This training must date to the first home impressions and its importance must ever be emphasized. Be sure you have enough wash cloths to go round if you try to teach a child.

And what about buttons, shoe ties, glove snaps, overshoes and buckles? And can you imagine that dozens of children do not really know their own clothing? I have often found that to be too true. One day in our Great Northwest when I expressed views about three and four year old children taking care of themselves if mothers managed to have all their clothing in good order, a very well meaning woman made exceptions. She said, "Well, I just love Jack so much that I want to button his clothes, tie his shoes, and do all such things for him as long as I can." She did not love him enough to let him get a few years of helpful home practice, so that he would be spared the heartache and anguish I have so often seen with beginners—the inevitable result of harmful doting mothering.

Fun for the Tiny Tots

Managing ties will amuse tiny tots for many days, and can be rigged up on a simple frame using gayly colored ribbons or tapes. After they have completely triumphed with the tying process itself, they will need no one to tell them shoes are tied the same way. They are just like parents, and learn to do by doing.

Buttons and buttonholes hold weird fascination for the babe in arms. When our little girl was less than two, she had great fun opening her father's shirts. He enjoyed it as much as she, and after they closed them together a few times, she played the double game alone, so we feel sure no teacher will ever be called to the basement to find her weeping and struggling over buttons.

I saw a fourth grade boy terribly humiliated last fall because his mother insisted he wear a pair of rubbers so tight he could not manage them himself.

Put yourself in the child's position, mother, and you will see that this training which leads to self-confidence is as vital as the series of processes when the little one learned to creep, to toddle, to walk, to run. See that the clothing is right—exactly right—and can be managed entirely by the wearer.

From the earliest possible age, children should handle things. They may prefer the rows of shining pots and pans to their own expensive toys. Let them have them even if you must wash them again. Think how eager they are to learn, and how much the touch, the sizing up, the sounding, is teaching them. Our little girl, now three and one-half years old, played for forty minutes on Monday with the rotary egg beater. She tried dozens of tricks, and I am sure learned at least one new idea each minute.

I am thoroly convinced they will find what amusement is most instructive for their own particular stage of development if they may have a thing or two which really appeals to them. Handling and exploring must not be confused with destruction, for there is no connection whatsoever. This same little girl in our home has all her toys, even her first rattle, and has never damaged any equipment in the kitchen, where she has spent numberless happy hours. Two essentials in gaining muscular control and mental development are provided by the handling of things and by free play.—Household Editor.

Good Hard Soap

IT IS a pretty safe proposition in making soap to carefully follow the recipe on the box of lye; and to the extent that that is carefully followed we may expect results. You doubtless know that the usual meat scraps such as rind and the like contain substances other than fat. And even cracklings may vary in the fat content. If after carefully following directions on the box you find there is a surplus of lye or the lye seems to separate from the fat try using more fat cautiously.

You cannot thicken lye by cooking it. It thickens by combining with fat and becoming saponified. If the recipe calls for salt be quite exact in its use.

How Lye Thickens

You can experiment a little in this way. If there seems to be considerable lye in the bottom after the soap has cooled and the hard part removed try adding fat to the settlings and watch the results. You may thus be able to find the cause of your difficulty.

Usually when the soap is cut there will be a bit of settlings in the bottom of the pan. This I have thought was due to the fact that there was more or less tissue, of which I spoke, in the meat.—May H. Mumaw.

Serve the Foods in Season

THIS is the season of the year which many farmers' wives designate as "between hay and grass" because winter vegetables are getting old and fresh ones have not yet arrived. Many families must now draw heavily on their canned supplies of both meat and vegetables. Canning is hard, hot work and a liberal use of foods that are plentiful at this season will help to conserve canned supplies.

Many gardens have a row or two of parsnips and salsify. These can be served in a variety of ways. Our favorite way with parsnips is to boil in salted water until tender, letting the water boil away so as to save all the flavor and minerals; add pepper and a liberal lump of butter or drippings (drippings are really best); pull back where they will not burn and fry to a delicate brown, stirring occasionally. Salsify makes a good substitute for oyster soup. Horseradish is at its best now and is delicious with boiled pork.

Eggs are plentiful and cheap, and there are so many ways of serving them that everyone ought to be suited. Milk and egg desserts are much easier to prepare than so much baked stuff and are more digestible, too. Milk should always be in season on a farm. Cottage cheese is a fine supper dish. Now is the season to prepare to put down a big crock of water glass eggs so one may use all one wishes when eggs are high without fear of feeling extravagant.

Maple syrup is in season, too, and if you serve griddle cakes and maple syrup or warm biscuits and maple syrup the men folks won't miss the dessert.—Mrs. Perley W. Lawton, Pa.

Greens for the Picking

"DO YOU know," a dear old lady said to me, "I just love to go out and gather wild things. It makes me feel nearer to the Father Heart of God as I pick wild flowers or plants that He, alone, has planted and care for. I like wild greens better than those grown in our gardens."

We were gathering as we talked and soon had a basket full of wild mustard, lamb's quarters, patience, and goose tongue. There are many edible weeds besides these, for dandelion, water cress, yellow dock (long curly leaves), milkweed, purslane, sorrel and others have untold food value.

Use them when they are very young and tender, either serving them as boiled greens with butter or uncooked in salads. Cress can be found as early as February, and all thru the spring months some green is at its best till in early summer purslane finishes the list. About May 1 you should be on the lookout for wild mustard and lamb's quarters. Why should our glorious country spend millions annually for tonics when nature provides them abundantly for the gathering?—E. May Willis, Md.

Prize Winning Hints

TO SEW backwards with the sewing machine, release the presserfoot slightly, draw the material slowly towards you, keeping the machine in the same motion as when sewing toward you. This is a wonderful help in making pockets, hemming towels, and all sorts of darning.

Often at this season weak spots are discovered in curtains. Before laundering them, use the described method and if thread near the same weight is used, the mending is scarcely visible.—Mrs. G. Cleve Blake, Pa.

We are ready now to answer all inquiries concerning the hem-stitching attachment which Mrs. Faulstitch praised so highly in the first prize winning letter of this series. She has been seriously ill so the delay in answering inquiries received is pardoned. Her attachment is very inexpensive and fits any machine. A stamped envelope, self addressed, sent to Home Page Editor, care of Pennsylvania Farmer, 261 S. Third St., Phila., Pa., will bring a quick reply.

The Most Beautiful Bible

"IT IS the most beautiful Bible I have ever seen," exclaimed a richly-clad lady to two friends. She spoke of its costly binding, its perfect print, its shining gold edges. Her hearers nodded appreciatively. They too loved books, and especially the Book of books.

After a moment the second lady spoke pensively.

"Strange, but to me the most beautiful Bible is a very plain one which my mother used to read to me when I was just a wee mite of a girl. Worn from much handling, even torn, but I have always loved that Bible more than others."

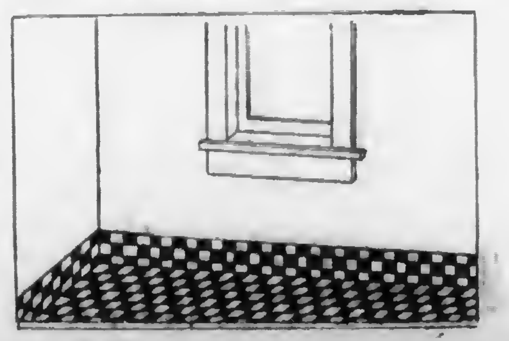
"I can understand that," spoke up the third lady. "To me the most beautiful Bible is one which my grandmother read aloud while I sat upon her knee. The Bible of our earliest recollection is ever the most beautiful."

"I had not thought of that," said the first lady, "and I've been neglecting reading the Bible to my little Marie! I'm afraid her earliest recollection will be of Mother Goose stories unless I soon begin."—Dora Mon Dore.

A Linoleum Baseboard

A KITCHEN can sometimes be made more attractive, and at the same time easier to keep clean, by using linoleum to cover the baseboards. If the baseboards are old and badly marred and worn, this improvement is well worth the cost.

Try to get the designs to match, making it look as if the linoleum on the baseboard and that on the floor were the same piece.—A. C. Wilson.



FASHION POINTERS

Colors and Fabrics Most Popular This Spring

COLORS this spring are misty, chalky, or grayed.

Navy blue will be very popular. Light blues all have a suggestion of rose to give them the misty look. Grayed greens and flesh color will be seen while yellow will be little used. White will be very prominent, and so will black, and black and white combinations are very good.

Silks for early spring and summer will be used largely. Cotton materials are more fascinating than ever with small-figured ones most popular, carrying out the misty tones.

Bordered materials are excellent, using the border at the skirt bottom or in the making of the blouse section. Avoid too many across lines.

Skirts have circular flares or are pleated, and are twelve inches from the floor.

Every country woman will want at least one popular smock. For every-day use make them full length and with short sleeves.

Printed silks wash beautifully again and again. Wash in a solution using one tablespoon neutral soap to each gallon tepid water. Rinse thoroly. If the garment is a dress, dry by putting it on a clothes hanger over a man's white shirt. Draw the shirt sleeves thru the dress sleeves and pin a Turkish towel up inside the shirt, so that no parts of the silk touch. Wringing should be done by placing the silk between two dry Turkish towels and rolling them up tightly. Ironing is unnecessary, tho hems may need a bit of smoothing.—E. R. Dilts, N. J.

Spread Cheer

WHAT is your mission here on earth? To spread trouble, dread, doubt, fear, or to be a distributor of joy, peace, happiness and faith?

My daughter (an expectant mother) came home today and said: "Oh, mother, I got so blue at home. Mrs. J. came in and told me Mrs. K. and her baby died. Yesterday Mrs. B. told me an awful sad story she heard in the city. It makes me tremble to hear that stuff, I wish they would not tell me things like that."

Had these same women talked of glad, peaceful, happy things of which they surely know a lot, how different would have been the effect on the hearer. When one is ill some folks always start the conversation with, "Well, how are you feeling today?" Thus bringing to mind every little pain and discomfort that has been overlooked before. Just to recount one's afflictions has a depressing effect. Yet some folks seemingly enjoy invalidism. Shed cheer, not gloom. It's just as easy and so much more appreciated.—Kate, Pa.

Sand for Cleaning

WHEN the bottom of a skirt becomes soiled, as even knee-length ones will, cover the soiled section with damp sea sand, roll up and let stand two or three hours or until the sand dries. Shake out and the stain will have disappeared. Clean white sand must be used.—Mrs. Lalia M. Thornton, N. Y.

Frostproof Plants

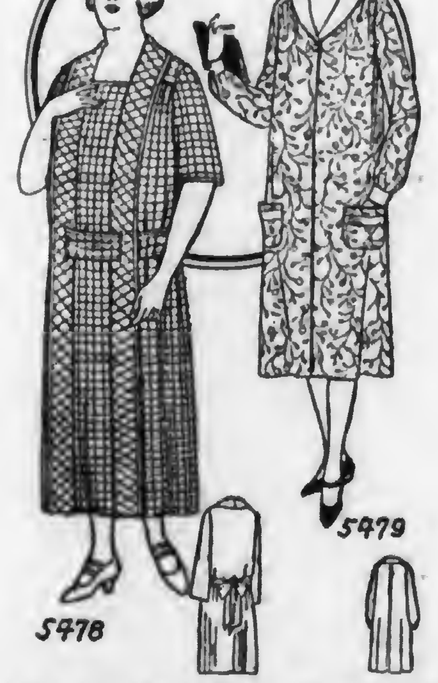
THERE may be some folks who are not aware of the recent success with frostproof plants. Last year we bought 500 cabbages and set them out April 15, using 100 in the garden and the balance on poorer soil. We had cabbage a month before any of our neighbors, and I sold many more than was needed to pay for the plants.

Our springs seem to be growing colder and we may not get them out this year before May 1st. But I do want to emphasize the fact that freezing weather did not affect these frostproof plants. — Owl Hollow Farmer's Wife, Pa.

A Smock Is "Just the Thing"

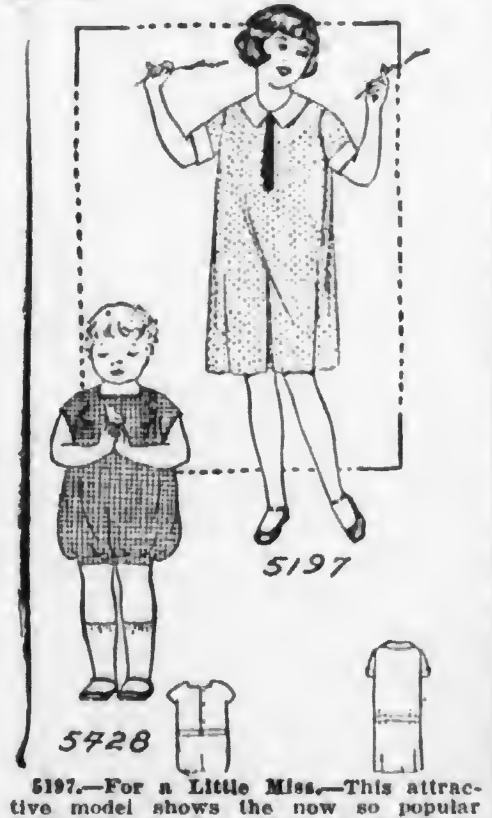
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5478.—One-Piece Dress.—This style has slenderizing lines and is becoming to youthful and to mature figures. Gingham with linen would be fine for this, or ratine with binding in a contrasting color. Taffeta, too, will be attractive for this style. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires 6¼ yards of 32-inch material. The width at the foot of the dress is 2½ yards. Pattern, 10 cents.



5479.—Popular Style.—The artist's smock has now invaded the office, kitchen and school house, and will be also worn in the garden during the coming season. It is especially pleasing in the new prints, cretonnes, and in tub silk. Ten sizes: 14, 16, 18 and 20 years for misses, and 36, 38, 40, 42, 44 and 46 inches bust measure for ladies. A 38-inch size, if made as illustrated, will require 4 yards of figured material and ⅜ yard of plain, 40 inches wide. Pattern, 10 cents.

5428.—Play Garment.—Gingham, seersucker, chambray or crepe could be used for this design. Three sizes: 6 months, 1, and 2 years. A 2-year size requires 1½ yard of 36-inch material. Pattern, 10 cents.



5197.—For a Little Miss.—This attractive model shows the now so popular kick plait at the center of the front. The fulness of the back is confined by a belt. Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 2 yards of 36-inch material. For collar, cuffs and belt of contrasting material ¾ yard 27 or 36 inches wide is required. Pattern, 10 cents.

Alcazar Kerosene Gas Range
Alcazar Combination Kerosene Gas Range and Built-in Kitchen Heater
Alcazar Oil Duplex Range
Quality Kitchen Ranges
Every Type, Style and Price for Every Fuel

Farm Cooking Can Be Improved

The Alcazar Oil Duplex Kitchen Range will improve it by eliminating the untidy appearance of the old-fashioned farm range, and by regulating the degree of heat.

The Alcazar Oil Duplex will give your kitchen the luxury formerly possible only to the city home—and with much less cost in time and fuel, for it burns kerosene and wood or coal—together or singly—can be regulated to any degree of heat instantly.

Why be satisfied with the old way of cooking when the Alcazar Oil Duplex offers you so much for so little—and saves you hours of kitchen drudgery?

Let Your Dealer Explain These Wonderful Ranges

Your local Alcazar dealer will tell you about this wonderful range, its many features not found in other ranges and its time and fuel-saving qualities, or write for illustrated booklet showing styles and sizes of the Alcazar Oil Duplex and the Alcazar Kerosene Gas Cook.

For the town house there is an Alcazar Duplex which burns gas and coal or wood. Ask us to send this free booklet.

ICE-BOUND HEARTS

By James Oliver Curwood

HOW THE STORY STARTED

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Forth Churchill to deliver the report of his failure to capture the murderer Scottie Deane and get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed reported he'd seen a white man and woman. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

Just when Pelletier believed he was dying Jim Blake appeared with a story of an Eskimo squaw left at an igloo up the coast. Pelletier discovers the story to be false. Blake attempts to kill the sick man, who is saved by Kazan—the one-eyed sledge dog. Then Pelletier starts a search for the deserted white woman which ended abruptly when he found a dead Eskimo woman and a living baby—Little Mystery he called her—in a nearby igloo. Eight days later MacVeigh returned to the cabin.

(Continued from last week)

"PELLY, old boy," he gasped to himself. "Pelly—"

He stared harder. And then he spoke a low word to the dogs, and stopped. He wiped his face. A deep breath of relief fell from his lips.

Straight up from the chimney of the cabin there rose a thick column of smoke.

He came up to the door of the cabin quietly, wondering why Pelletier did not see him, or hear the three or four sharp yelps the dogs had given. He twisted off his snowshoes, chuckling as he thought of the surprise he would give his mate. His hand was on the door-latch when he stopped. The smile left his lips. Startled wonderment filled his face as he bent close to the door and listened, and for a moment his heart throbbed with a terrible fear. He had returned too late—perhaps a day—two days. Pelletier had gone mad!

He could hear him raving inside, filling the cabin with a laughter that sent a chill of horror thru his veins. Mad! A sob broke from his lips, and he turned his face up to the sky. And then the laughter turned to song. It was the sweet love-song which Pelletier had told him that the girl down south used to sing to him when they were alone out under the stars. Suddenly it broke off short, and in its place he heard another sound. With a cry he opened the door and burst in.

"My God! Pelly—Pelly—"

Pelletier was on his knees in the middle of the floor. But it was not the look of wonderment and joy in his face that Billy saw first. He stared at the little golden-haired creature on the floor in front of him. He had traveled hard—almost day and night—and for an instant it flashed upon him that what he saw was not real. Before he could move or speak again Pelletier was on his feet, wringing his hands, and almost crying in his gladness. There was no sign of fever or madness in his face now. Like one in a dream Billy heard what he said.

"God bless you, Billy—I'm glad you've come!" he cried. "We've been waiting 'n' watching, and not more'n a minute ago we were at the window, looking along the edge of the bay thru the binocular. You must have been under the ridge. My God—a little while ago I thought I was dying—I thought I was alone in the world—alone—alone. But look—look, Billy—I've got a fam'ly!"

LITTLE MYSTERY had climbed to her feet. She was looking at Billy, her golden curls tousled about her pretty face, and gripping two or three of Pelletier's old letters in her tiny hand. And then she smiled at Billy, and held out the letters to him. In an instant he had dropped Pelletier's hands, and had caught her up in his arms.

"I've got letters for you in my pocket, Pelly," he gasped. "But—first—you've got to tell me who she is, and where you got her—"

Briefly Pelletier told of Blake's visit, the fight, and of the finding of Little Mystery.

"I'd have died if it hadn't been for her, Billy," he finished. "She brought me back to life. But I don't know who she is, or where she came from. There wasn't anything in his pockets or in the igloo to tell. I buried him out there—shallow—so you could take a look when you came back."

He snatched, like a starving man for food, at the letters MacVeigh pulled from his pocket. While he read Billy sat down with Little Mystery on his knees. She laughed, and put her warm little hands up to his rough face. Her eyes were blue, like Isobel's, and suddenly he crushed his face close down against her soft curls, and held her so close to him that for a moment she was frightened. A little later Pelletier looked up. His eyes shone, his thin face was radiant with joy.

"God bless the sweetest little girl in the world, Billy," he whispered huskily. "She says she's lonely for me. She tells me to hurry—hurry down there to her. She says that if I don't come soon she'll come up to me! Read 'em, Billy!"

He looked in astonishment at the change which he saw in MacVeigh's face. Billy accepted the letters mechanically, and placed them on the edge of the bunk near which he was sitting.

"I'll read them—after a while," he said slowly.

Little Mystery clambered from his knee and ran to Pelletier. Billy was staring straight into the other's face.

"You're sure you've told me everything, Pelly? There wasn't anything in his pockets? You searched well?"

"Yes. There was nothing."

"But—you were sick—"

"That's why I buried him shallow," interrupted Pelletier. "He's close to the last cross, just under the ice and snow. I wanted you to look—for yourself."

BILLY rose to his feet. He took Little Mystery in his arms again, and looked closely in her face. There was a strange look in his eyes. She laughed at him, but he did not seem to notice it. And then he held her out to Pelletier.

"Pelly, did you ever notice eyes very closely?" he asked. "Blue eyes?"

Pelletier stared at him amazed.

"My Jeanne has blue eyes—"

"And have they little brown dots in them, like a wood violet?"

"No-o-o-o—"

"They're blue, just blue, ain't they?"

"Yes."

"And I suppose most all blue eyes are just blue, without the little brown spots. Wouldn't you think so?"

"What in Heaven's name are you driving at?" demanded Pelletier.

"I just wanted you to notice that her eyes have little brown spots in 'em," replied Billy. "I've only seen one other pair of eyes—just like hers." He turned toward the door. "I'm going out to care for the dogs, and dig up Blake," he added. "I can't rest until I've seen him."

Pelletier placed Little Mystery on her feet.

"I'll see to the dogs," he said. "But I don't want to look at Blake again."

The two men went out, and while Pelletier led the dogs to a lean-to behind the cabin, Billy began to work with an ax and spade at the spot his comrade had pointed out to him. Ten minutes later he came to Blake. An excitement which he had tried to hide from Pelletier overcame his sense of horror as he dragged out the stiff and frozen corpse of the man. It was a terrible picture that the dead man made, with his coarse bearded face turned up to the sky and his teeth still snarling, as they had snarled on the day he died.

Billy knew most men who had come into the north above Churchill, but he had never looked upon Blake before. It was probable that the dead man had told a part of the truth, and that he was a sailor, left on the upper coast by some whaler. He shivered as he began going thru his pockets. Each moment added to his disappointment. He found a few things, a knife, two keys, several coins, a fire-flint, and other articles—but there was no letter or writing of any kind, and that was what he had hoped to find. There was nothing that might solve the mystery of the miracle that had descended upon them. He rolled the dead man into the grave, covered him over, and went into the cabin.

Pelletier was in his usual place—on his hands and knees—with Little Mystery astride his back. He paused in a mad race across the floor of the cabin and looked up with inquiring eyes. The little girl held up her arms, and MacVeigh tossed her half way to the ceiling and then hugged her golden head close up to his chilled face. Pelletier jumped to his feet; his face grew serious as Billy looked at him over the child's tousled curls.

"I found nothing—absolutely nothing of any account," he said.

He placed Little Mystery on one of the bunks, and faced the other with a puzzled look in his eyes.

"I wish you hadn't been in a fever on that day of the fight, Pelly," he said. "He must have said something—something that would give us a clue."

"Mebby he did, Billy," replied Pelletier, looking with a shiver at the few things MacVeigh had placed on the cabin table. "But there's no use worrying any more about it. It ain't in reason that she's got any people up here—six hundred miles from the shack of a white man that'd own a little beauty like her. She's mine. I found her. She's mine to keep."

HE SAT down at the table, and MacVeigh sat down opposite him, smiling sympathetically into Pelletier's eyes.

"I know you want her—want her bad, Pelly," he said. "And I know the girl would love her. But she's got people—somewhere, and it's our duty to find 'em. She didn't drop out of a balloon, Pelly. Do you suppose—the dead man—might be her father?"

It was the first time he had asked this question, and he noted the other's sudden shudder of revulsion.

"I've thought of that, Billy. But it can't be. He was a beast, and she—she's a little angel. Billy, her mother must have been beautiful. And that's what made me guess—fear—

Pelletier wiped his face uneasily, and the two young men stared into each other's eyes. MacVeigh leaned forward, waiting.

"I figured it all out last night, lying awake there in my bunk," continued Pelletier, "and as the second best friend I have on earth, I want to ask you not to go any farther, Billy. She's mine. My Jeanne, down there, will love her like a real mother, and we'll bring her up right. But if you go on, Billy, you'll find something unpleasant—I—I—swear you will!"

"You know—"

"I've guessed," broke in the other. "Billy, sometimes a beast—a man-beast—holds an attraction for a woman, and Blake was that sort. You remember—two years ago—a sailor ran away with the wife of a whaler's captain away up at Narwhal Inlet. Well—"

Again the two men stared silently at each other. MacVeigh turned slowly toward the child. She had fallen asleep, and he could see the dull shimmer of her golden curls as they lay scattered over Pelletier's pillow.

"Poor little devil!" he exclaimed softly.

"I believe that woman was Little Mystery's mother, Billy," Pelletier went on. "She couldn't bear to leave the little kid when she went with Blake, so she took her along. Some women do that. And after a time she died. Then Blake took up with an Eskimo woman. You know what happened after that. We don't want Little Mystery to know all this when she grows up. It's better not. She's too little to remember, ain't she? She won't ever know."

"I remember the ship," said Billy, not taking his eyes off Little Mystery. "She was the Silver Seal. Her captain's name was Thompson."

He did not look at Pelletier, but he could feel the quick, tense stiffening of the other's body. There was a moment's silence. Then Pelletier spoke, in a low, unnatural voice.

"Billy, you ain't going to hunt him up, are you? That wouldn't be fair to me, or the kid. My Jeanne'll love her, an' mebby—mebby some day your kid'll come along an' marry her—"

MacVeigh rose to his feet. Pelletier did not see the sudden look of grief that shot into his face.

"What do you say, Billy?"

"Think it over, Pelly," came back Billy's voice huskily. "Think it over. I don't want to hurt you, and I know you think a lot of her, but—think it over. You wouldn't rob her father, would you? An' she's all he's got left—of the woman. Think it over, Pelly, good 'n' hard. I'm going to bed—an' sleep a week!"

BILLY slept all that day, and the night that followed, and Pelletier did not awaken him. He aroused himself from his long sleep of exhaustion an hour or two before dawn of the following morning, and for the first time he had the opportunity of going over with himself all the things that had happened since his return to Fullerton Point.

His first thought was Pelletier—and Little Mystery. He could hear his comrade's deep breathing in the bunk opposite him, and again he wondered if Pelletier had told him everything. Was it possible that Blake had said nothing to reveal Little Mystery's identity, and that the igloo and the dead Eskimo woman had not given up the secret? It seemed inconceivable that there would not be something in the igloo that would help to clear up the mystery. And yet, after all, he had faith in Pelletier. He knew that he would keep nothing from him, even tho it meant possession of the child. And then his mind leaped to Isobel Deane.

Her eyes were blue, and they had in them those same little spots of brown he had found in Little Mystery's. They were unusual eyes, and he had noticed the brown in them because it had added to their loveliness, and had made him think of the violets he had told Pelletier about. Was it possible, he asked himself, that there could be some association between Isobel and Little Mystery? He confessed that it was scarcely conceivable, and yet it was impossible for him to get the thought out of his mind.

Before Pelletier awoke he had determined upon his own course of action. He would say nothing of what had happened to himself on the barren—at least not for a time. He would not tell of his meeting with Isobel and her husband, or of what had followed. Until he was absolutely certain that Pelletier was keeping nothing from him, he would not confide the secret of his own treachery to him. For he had been a traitor—to the law. He realized that. He could tell the story, with its fictitious ending, before they set out for Churchill, where he would give evidence against Bucky Smith.

Meanwhile he would watch Pelletier, and wait for him to reveal whatever he might have hidden from him. He knew if Pelletier was concealing something, he was inspired by his almost insane worship of the little girl he had found, and who had saved him from madness and death. He smiled in the darkness as he thought that, if Pelletier were working to achieve his own end—possession of Little Mystery—he was inspired by emotions no more selfish than his own in giving back life to Isobel Deane and her husband. On that score they were even.

He was up and had breakfast started before Pelletier awoke. Little Mystery was still sleeping, and the two men moved about softly in their moccasined feet. On this morning the sun shone brilliantly over the southern ice-fields, and Pelletier aroused Little Mystery so that she might see it before it disappeared. But to-day it did not drop below the gray murkiness of the snow-horizon for nearly an hour. After breakfast Pelletier read his letters again, and then Billy read them. In one of the letters the girl had put a tress of sunny hair, and Pelletier kissed it shamelessly before his comrade.

"She says she's making the dress she's going to wear when we're married, and that if I don't come home before it's out of style she'll never marry me at all," he cried joyously. "Look there—on that page—she's told me all about it. You're—you're goin' to be there ain't you, Billy?"

"If I can make it, Pelly"

"If you can make it! I thought—you was going out of the service when I did."

" I've sort of changed my mind."

"And you're going to stick?"

"Mebby for another three years."

Life in the cabin was different after this. Pelletier and Little Mystery were happy, and Billy fought with himself every hour to keep down his gloom and despair. The sun helped him. It rose earlier each day and remained longer in the sky, and soon the warmth of it began to soften the snow underfoot. The vast fields of ice began to give evidence of the approach of spring, and the air was more and more filled with the thunderous echoes of the break-up.

News and Notes

SEVERAL attempts have been made to establish on American farms the llama and alpaca, domestic animals found in the Andes Mountain regions of South America. They are used as beasts of burden, and yield hair used in making cloth. All attempts to grow them in the United States have failed, as they cannot stand our climate. Daniel Webster was one of the first to give them a trial. The Peruvian government gave him several when he was Secretary of State.

* * *

It is estimated that there are twenty million wooden plows in use in India. These primitive implements, sticks tipped with iron, are very similar to the type used by farmers of India a thousand years ago.

* * *

In 1889 an eccentric New York banker, who had set out to sail around the world in his own yacht, stopped at a little town off the coast of England. He lived in his boat, anchored in that same spot, until he died a few days ago,—thirty-six years on a boat without going anywhere.

* * *

Pumpkins sometimes increase in weight as much as two pounds a day during the growing season.

* * *

Mad dogs don't "just go mad," says the Pennsylvania Bureau of Animal Industry. They must have been bitten by rabid dogs or contracted the germs of rabies in some other way. Rabid dogs don't go out of their way to bite other animals or people. They bite only when interfered with. Quite often more cases of rabies are reported during the winter than during "dog days" of late summer.

No need to buy heavy gauge if you use LEADCLAD

THICK TOUGH

Take a knife and shave a piece of LEADCLAD wire. Note how thick the pure lead jacket is. You can't scrape all the lead off, even with a sharp knife. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

Farmers everywhere have been buying and paying extra for fencing of a heavier gauge than is actually necessary. In galvanized fence, heavy wire is recommended because of the short life of galvanized coating which soon wears off and permits rust to attack the wire. The heavier the wire, of course, the longer it will take rust to finally destroy it.

Using Leadclad fence, wire three or four gauges lighter will give the same protection and last many times longer. Leadclad wire is coated with pure lead, seven times heavier than the best galvanized wire obtainable. Changes in temperature, frost or moisture do not affect the lead coating. It will not check, chip or peel off. Read what Mr. Pierce says:—

Canonsburg, Penna.
March 9, 1926.

Mr. G. W. Campbell
Moundsville, W. Va.
Dear Sir:

In spring of 1920 erected 30 rods of your 5 strand lead clad wire fence. It was run thru a dense thicket where it would be subject to trying conditions. On examination this spring, I did not find a sign of rust. I am confident that the fence will last as long as the posts.

At the same time erected 30 rods of galvanized wire in open field. Its condition is such that it will have to be replaced at once.

Yours truly,
S. D. Pierce.

Leadclad fencing is made in all standard types for stock or poultry. Special 5% discount on club orders. We pay the freight.

Return the coupon below and we will send you samples of Leadclad wire and complete information.

Massey-Harris Corn Binder

is the *only* Corn Binder handling the stalks in an inclined position on which the knotter and needle can be raised or lowered without stopping the machine or leaving the seat. Built low—no danger of tipping over. Free from neckweight or side-draft. Largest drivewheel used on any corn binder makes draft light.

Gets *All* the Corn

The corn is handled gently by special fingers instead of by packers. The Binder picks up and binds all the corn without breaking off the ears. Folding or power bundle carriers are supplied if wanted.

However long you may use the Corn Binder you can always get repair parts. This holds good also for every Massey-Harris Machine.

Write for our large Catalog and name of Massey-Harris dealer.

"Good Equipment Makes a Good Farmer Better"

Good to the last forkful

This Unadilla *makes* good silage and *keeps* it good. One farmer writes us, "although we did not open the Unadilla for almost a year, our silage was in perfect condition."

There is no waste—no mouldy silage—no oozing out of valuable juices, for the Unadilla doors are so made (of wood least affected by moisture) that they are air tight, frost repellant, strong and durable. They are important factors in insuring good, palatable, succulent, and productive silage.

Safe, efficient, convenient, and moderately priced, the Unadilla can solve your silo problems as it has those of thousands of other farmers.

Write today for our big catalog. It's well worth your while. Ask too, about our special discount on early cash orders.

Our water tubs, storage tanks and vats are moderately priced and sturdily built.

Wisconsin, Missouri and average New England, ½-blood, 41@42c; ⅜-blood, 43@44c; ¼-blood, 42@43c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio April 17, 1926.

Cloverseed, cash, domestic, $21; imported, $14.35; October, $16.05 bid. Alsike, cash, $17. Timothyseed, cash, $3.40; September, $3.50 asked.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday April 19th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran ....$	35.00
Spring bran	34.50
Soft winter wheat bran......	36.00
Standard middlings	33.20
Soft winter wheat middlings	33.70
Flour middlings	36.00@41.00
Red dog flour	39.50
White hominy	33.20
Gluten feed	38.35
36 per cent cottonseed meal..	38.75
41 per cent cottonseed meal..	41.25
43 per cent cottonseed meal..	43.00
34 per cent linseed meal	54.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Feed Market Situation

THE feed market has become decidedly firmer during the past week. Interior northwestern mills are reported running at only about twenty-five per cent of capacity and hard winter wheat mills of the Southwest at not more than fifty per cent of capacity. Offerings of wheat feeds for immediate shipment are limited and prices have been advanced about $1.50 per ton. Demand has not broadened greatly, however, and feed for later delivery can be bought at a discount of 50c@$1 per ton under spot prices.

The linseed meal market also remains very firm, altho prices have not changed materially. Crushers are reported to have practically no stocks of meal and to be well sold up on their current production. Light receipts of domestic flax are restricting the production of linseed meal except by those crushers which are using imported seed. Meal from Argentina flaxseed is now being offered in eastern markets, but this meal is slightly lower in protein content than the meal from domestic seed.

Cottonseed Meal Advances

Prices on cottonseed meal have also been advanced about 50c for the best grades of meal, altho the lower grades can still be bought at discounts of $1@3 per ton below the prices of prime meal. Stocks of cottonseed meal are of good volume altho they are being reduced fairly rapidly by a more active demand both by domestic and export buyers.

Corn feeds also are holding firm. The grass price quotations recently made by some of the gluten feed manufacturers were withdrawn April 10, as production during the period covered by these prices had been mostly contracted for. Hominy prices were advanced about 50c per ton during the week.

Alfalfa meal continues dull because of the limited demand. Offerings in the Southwest, however, are becoming smaller and the market has become slightly firmer in that territory.—United States Bureau of Agricultural Economics.

County News and Comment

Centre County, Pa.—Have had cool weather up to present. Very few days without snow. The numerous farm sales have been well attended and prices have been high, especially pigs which are scarce and in great demand. Many families have changed homes. Wheat looks bad, owing to repeated freezing and thawing. Some plowing done on elevated land facing the sun. Many tractors have been bought this spring by farmers in the county. Prices: wheat, $1.60; rye, 80c; corn, 70c; oats, 35c; apples, 60c pk.; butter, 45c; eggs, 35c; lard, 18c.—A., April 6.

Clarion County, Pa.—April coming in with snow and freezing weather. Wheat and grass fields very brown. Conditions of wheat fields look bad at present. Not much plowing done yet. Most farmers done hauling manure. Grass seed to be sown. Most people in section will have to feed for next month or six weeks. Grain feed seems plentiful. Public roads in bad condition. Farm sales about over. Not many renters changing farms. Some few buying farms of their own. Governor Pinchot has granted some new road to be built thru this section this summer. Prices: butter, creamery, 50c; eggs, 25c; hogs, 15@16c; veal, 14c; wheat, $1.60; oats, 45c; corn, 45c; potatoes, $2.25@3.25.—C. R., April 6.

Montgomery County, Pa.—March has been a very hard month on grain and grass fields. A good many soy beans will be planted this spring, sweet clover is gaining in popularity. A few farmers have started to plow on the high places. Not as much oats will be sown this spring. A good many farms have changed hands and some will lie idle. The baby chick business is now at its height, the prices are about the same as last year. Dairy cows are in strong demand. Efforts are being made to form another cow testing association. The grain and feed market took a sharp slump. Prices: wheat, $1.60; corn, 75c; oats, 70c; eggs, 32c; chickens, 30c; veal calves, 13c.—C. N. D., April 6.

Passaic County, N. J.—The weather for the last month has been unseasonably cold with quite a bit of cloudy weather. No plowing to speak of as yet except in Richfield section. Pruning is about all completed except some of berries and they will be finished in about a week. Roads are fair. Markets are very small now as there is very little stuff from around here but what produce there is is bringing a good price. Chickens are doing well and eggs are bringing a fair price.—N. D., April 12.

Potter County, Pa.—April came in with an all-day snowstorm. Dirt roads very muddy and no cars are used on many of them. Fires are burning in the sugar camps. It has been a favorable season for syrup-making, but there are few large maple groves left. Many farmers are buying hay and there is only a hint of green in the pastures. There is much interest in dairying and cows bring good prices. Few farm sales. Many farms idle for lack of tenant farmers. A few potatoes are being shipped at the unusual price of $3 per bushel. Butter 45c; eggs, 30c; hay, $10@12. Few pigs offered for sale. Veal calves selling for 10c lb.—M. C. S., April 10.

Tioga County, Pa.—There have been no really warm days yet. Last night thermometer dropped to fourteen. There were frequent snow squalls in April. The sugar season has been short but busy. There has been the largest run in several seasons. Many farmers have already made three times as many gallons as last year. A few farmers are quitting but in late running bushes there will be more good runs yet. Ground too wet in most places for plowing. Dirt roads have been very bad but are now drying up. Quite a few farmers are buying hay. Roughage rather scarce, too, as the long feeding season has taken more than common. A few prices: maple syrup, $1.75@2; good veals, 12c; eggs, 27c; potatoes, $2.50; hay, $15 in the barn.—P. W. L., April 13.

Prices and Prospects

THE old potato market was very active during the early part of the week ending April 14, but toward the close an unsettled condition prevailed in many of the largest markets. Prices generally held up well but buyers were holding off due to the heavy supplies and the high price levels. On April 14 there were 133 cars on track in Philadelphia and in Chicago there were 402. On the same day Pennsylvania round whites sold at $8.00 to $9.00 per 150 lb. sack in Philadelphia, $9.00 in Baltimore and $8.00 to $8.50 in Pittsburgh.

The total supplies of old potatoes on hand are light and the unseasonable cold weather has helped to sustain consumption. Unfavorable weather in Florida has held back the active movement of new stock and the combination of conditions has resulted in the present high range of prices. Dealers feel that the lull in the market will pass as soon as supplies start to work out into the trade. It is only natural that when two sacks of potatoes cost $18.00 buyers will be wary. Last year at this time they could get the same amount of potatoes for around $2.50.

Some price reductions may be made to start more active buying but it is likely that the market will recover. It would be purely guess-work to predict future prices for old stock.

Nearby White Egg Receipts Liberal

Nearby white eggs were in liberal receipt on the New York market thruout the week ending April 14th. Prices worked lower during the early part of the week, but trading was more active toward the close due to the light receipts of Pacific Coast stock. This also resulted in the larger chain stores buying nearby eggs. Some stock was forced into storage to avoid loss. The high cost of the bulk of receipts continues to be the chief strengthening factor.

Continued light receipts of live poultry caused the New York market to hold firm. Prices advanced with light fowl in particular demand. Old roosters sold well while the few express fowl that arrived were in active demand. Express broilers also sold well. Fresh-killed poultry was in light supply but trading was quiet. Broilers were in limited receipt and worked out at extremely high prices. This applied chiefly to fancy and large stock, for small broilers from nearby sections were offered at comparatively low figures.

The butter market was unsatisfactory thruout the week ending April 14. Opening last Wednesday in an easy position the market declined a cent at Philadelphia during the day on 92 score to 41c. The following days brought no relief and with continued heavy supplies on the market together with heavy receipts and light to moderate demand, futher declines were recorded. The Philadelphia market on 92 score closed Wednesday at 39c and at New York at 38½c. Lower scores have also been lowered in price with the price on "undergrades" goods a matter of negotiation between buyer and seller.

Winter Wheat in Better Condition

The winter wheat crop in all sections of the country was reported on April 1 to be in better condition generally than for any other year on this date since 1921, when it was ninety-one per cent of normal. The season is backward with snow still covering the ground in the mountain and northernmost counties.

The generally excellent condition of the winter wheat tended to depress the market during the week ending April 10, but there was some improvement in the foreign demand. Prices were not materially changed but the demand in general was more active. The corn market held fairly firm with a more active demand. Oats were firm under moderate receipts and an active demand. The rye market has improved somewhat.

The demand for hay was more active thruout the week due to the unseasonable cold weather and delayed pasturage. Poorer grades were barely steady at most markets. Timothy hay was generally firm. Top grades closed about 50c higher at New York and the Boston market was unchanged. Bad roads in Ohio cut down receipts at Pittsburgh and prices held firm. Pastures in Pennsylvania were late in starting and show very few signs of life. Hard, cold winds have been quite severe on many fields.—W. R. Whitacre.

Your Water Supply need NOT Perplex you

"How can I know what Water System to install?" is the question many puzzled suburban or country home owners are asking.

Deep well or shallow well? Duro makes automatic pumps for both. Village bungalow or country estate, summer cottage or western ranch? It matters not, there's a Duro system that will give you an abundance of fresh running water under pressure—just like city water service. Prices as low as $79.50 f. o. b. Dayton.

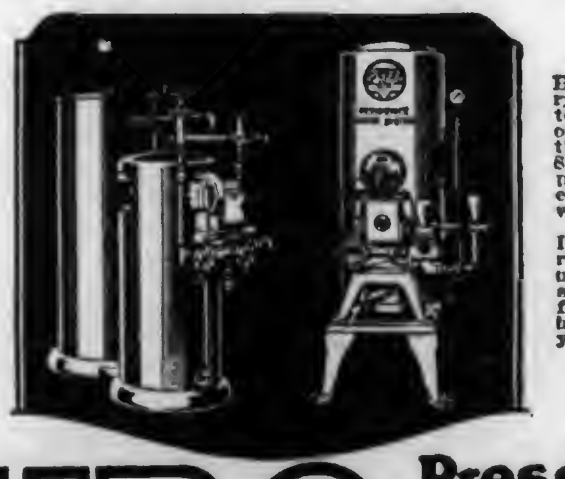
Water supply need not perplex you, no matter where you live. Let Duro help you.

What is your problem? Tell us! Give Duro the facts and factory-trained engineers will write you in detail. Get this expert advice free, and without obligation. You'll need it sooner or later. Write for Free Consultation Blank.

THE DURO COMPANY
1204 Monument Ave. Dayton, Ohio
Largest Manufacturers of Water Systems and Water Softeners

For bathing, shampooing, laundering, dish washing—nothing helps so much as pure perfectly softened water.

If your city or well water is hard, simply connect the Duro Automatic Water Softener to your plumbing. Automatically without attention, the water is perfectly softened.



Home owners everywhere testify to the efficiency of the Duro Vertitank Water System—the complete automatic, electric, home water works.

It will give fresh running water under strong pressure from every faucet in the house—year after year.

DURO Pressure Water Systems and Automatic Water Softeners

Duro Guarantees Satisfactory Water Service

No small part of the "knack" of making money from dairying lies in keeping a constant watch of the udder and teats. If the delicate tissues of this important organ are always normal and comfortable the milk-flow is free and generous—the job of milking is made easy.

Bag Balm is a wonderful healing, penetrating ointment—prepared especially for the quick healing and restoring of injured udder or teats. For chaps, teat sores, cracked or stepped-on teats, cuts, inflammation, caked bag, bunches or cow pox Bag Balm has no equal. Healing begins at once; all irritation goes promptly.

Bag Balm cannot taint the milk; it is clean and pleasant to use. Big 10-ounce package goes a long way and has hundreds of uses for all animal sores, harness galls, etc. 60c, at feed dealers, general stores and druggists—or direct from us if your dealer is not supplied.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

The Dangerous Wells

TO THE EDITOR:—I have been a reader of Pennsylvania Farmer for a long time and have never read anything in regard to the dangerous, old dug wells which are scattered thru the rural districts. They are often left open and uncovered where little children, or anyone going thru the field, would be liable to fall from twenty-five to sixty feet. It is too bad there is no law to compel owners to make them safe.—A. B. N., New York.

Isn't It Worth While?

TO THE EDITOR:—In reading letters about "Things I Wish My Husband Wouldn't Do," my mind turns back to an article written by a young farmer, published in your paper several years ago. He wondered what the coming farmers would do for wives as most of the girls preferred to go to town. When we read or hear complaints similar to those published in your paper of March 27 can we wonder why?

Of course, all farmers are not alike but can we blame the girls for being afraid to take the risk when there are so many neglected ones?

Of all lives, the life of a farmer's wife needs something outside her daily duties to relieve the monotony, and of all women, the farmer's wife deserves an equal partnership in business and pleasure as well as work,—she usually gets a big share of work along with the rearing of the family.

Can we censure the girls for preferring to earn their own living and be independent rather than take the risk of being an unpaid domestic as many farmers' wives are, compelled almost to beg for money for the mere necessities of life?

We can read items and books anytime telling how a woman may keep her husband's love. Are men never concerned about how to keep their wives' affection? Don't they think it worth while to try to keep their wives happy and attractive by a little attention to their wants and pleasures?

Now, someone is thinking the writer is surely a sour old maid. Oh, no! I am a farmer's wife with a bank account and an automobile of my own, fortunately, or I might be hunting a job to earn money to start a bank account.

It seems to me that these are subjects that need discussion just as much as crops, stock or poultry—Mrs. Independent.

Another Thistle Treatment

I READ something in your paper about Canada thistle, and since I have had some experience helping my neighbors get rid of them I shall pass it on.

The best way to eradicate the thistle is to put in corn. As soon as you cultivate the corn for the last time go thru with the hoe and scratch them off every three or four days,—the oftener the better. The more it rains the better, as it rots them away. Keep this treatment up until the winter.

Last year I commenced about the tenth of July, and in four weeks the thistles were fewer. I don't give up. The second year I take them out with the potato fork as I find them. If in the oats I make a hole with an iron down beside the thistle, and pour in slowly a strong salt water solution.

I am quite sure if the farmers follow my method there won't be a second year. Just try it.—Oscar M. Myers, Bucks County, Pa.

RADIO DEPARTMENT

Too Much Noise

About two months ago I purchased a radio receiving set which operated very satisfactorily until recently. Now I cannot get anything but local stations and they come in very noisy. The noise is sometimes a roar which continues when the aerial and ground wires are disconnected also when the two tubes nearest the front are removed, other times it squeals and howls when trying to tune in stations chiefly on wavelengths between 325 and 450 meters, other times it has a scraping, scratching sound accompanied by clicks. The trouble started while using dry B batteries. I have a very good ground connection to a cold water pipe. Have gone over aerial carefully, also tried indoor and light socket aerials, changed tubes, put in a set of new tubes, checked tube sockets for poor contact, etc. The lead in wire passes very close to the telephone wire but at right angles.—J. B. B., Cambria County, Pa.

Since you have checked your set for poor contacts and defective batteries and have inspected your aerial and ground for loose connections, the trouble is apparently in the set itself. I hope you purchased this set from a reliable dealer who will be willing to test it for you free of charge. It is possible that one of the audio transformers is burned out and needs replacement. Unless you are well acquainted with radio I would hesitate to suggest that you attempt any repairs yourself.

The proximity of the telephone could not appreciably affect the set.

The B eliminator would have been the most satisfactory source of high voltage. The type of set you have is prone to whistle when you are tuning on short wavelengths.—B. F.

B Power Supply

What do you think would be the best to operate a radio? We have electric current in the house. Which would you advise a B eliminator or B wet batteries? I can get either at about the same price.—F. D., Dauphin County, Pa.

You write to ask advice on the purchase of B power supply. If you purchase a B eliminator, listing at around $35 to $50 we believe this will prove just as satisfactory as batteries and the upkeep will be very slight. It also calls for no attention.

Should you intend using it on a superheterodyne or a sensitive R. F. set having more than two stages of radio frequency amplification, the B batteries of the storage variety might prove a little quieter in operation. On ordinary sets no difference can be detected except with low priced B eliminators.—B. F.

BUFF ROCK hatching eggs, $1.50 for 15. Mrs. S. L. Gilbert, Cochranville, Pa.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

PIGS SICK AFTER EATING GARBAGE.—I wish to ask you why our pigs got sick. We fed them things from a boarding house and they ate it all right for quite a while and then they would not eat any. We tried to give them corn and sour milk but they would not even touch it. They got so sick that they could not walk.—R. S., Gouldsboro, Pa. One of the problems relating to garbage feeding is that of hog cholera. This disease may be spread thru the meat rinds usually found in garbage and which are not cooked and which serve as a means of infecting susceptible animals. We would advise that you have your graduate veterinarian use the serum virus treatment as a means of producing an immunity in the new purchases of hogs in order that additional losses may not occur. As you understand, if this is hog cholera, any new animals brought into these quarters are apt to get the disease and you will continue to have losses. The premises should be thoroly cleaned and disinfected and left free of any animals for some time.

THRUSH.—I have a 1400-pound mare seven years old, in good health and flesh. Last fall she went lame in front feet and got better, then went lame again. She has the thrush and have applied pine tar, but it did not help her much. What cure would you advise for her?—A. L. W., Fairview, Pa. The horse's feet should be thoroly cleaned and the stall kept dry by providing plenty of clean, dry bedding. Cut away all unnecessary or diseased tissue. Apply formalin full strength and repeat on second day. It may be necessary for your graduate veterinarian to pack the feet with an antiseptic pack and bandage.

DOG HAS SWELLINGS.—I have a fox terrier and at times his head swells and he gets lumps on his body. They last for a few minutes. He is also subject to worms, altho I have given him worm medicine. Could you tell me what to do or give him?—W. P. G., New Providence, Pa. You would do well to secure some dependable worm medicine and remove the intestinal parasites. The diet is probably rich in carbohydrates, such as bread, macaroni or potatoes. Feed the dog largely on a meat and vegetable diet, giving doses of castor oil two or three times during the month. Unless these swellings are abscesses accompanying or following distemper you should note improvement.

THRUSH.—I have a horse that has a thrush in one hind foot. Can you tell me what to do?—J. F. S., Burns, N. Y. First clean the foot thoroly, cutting away any tissue that is abnormal. Apply iodine or other antiseptic to the part. Clean the stall and keep it dry as filth will prolong the condition. It is frequently necessary to consult your local graduate veterinarian in handling these cases.

HORSE FAILS TO PUT ON WEIGHT.—I have a mare nearly nine years old. I have been feeding her two quarts of oats three times a day all winter and gave her the best of care, and A-1 timothy hay. For some reason she is getting thin. She eats enough and seems healthy. I have a horse on the same feed and care and he is taking on flesh and doing fine. What do you think could be wrong?—D. T. S., Murrysville, Pa. With good feed and plenty of exercise this mare should improve. The fact that she doesn't indicates some abnormal condition which should be cared for by your nearest graduate veterinarian. It may be her teeth, intestinal parasites or some other obscure condition that would escape the notice of one not especially trained in diagnosis.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 50,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

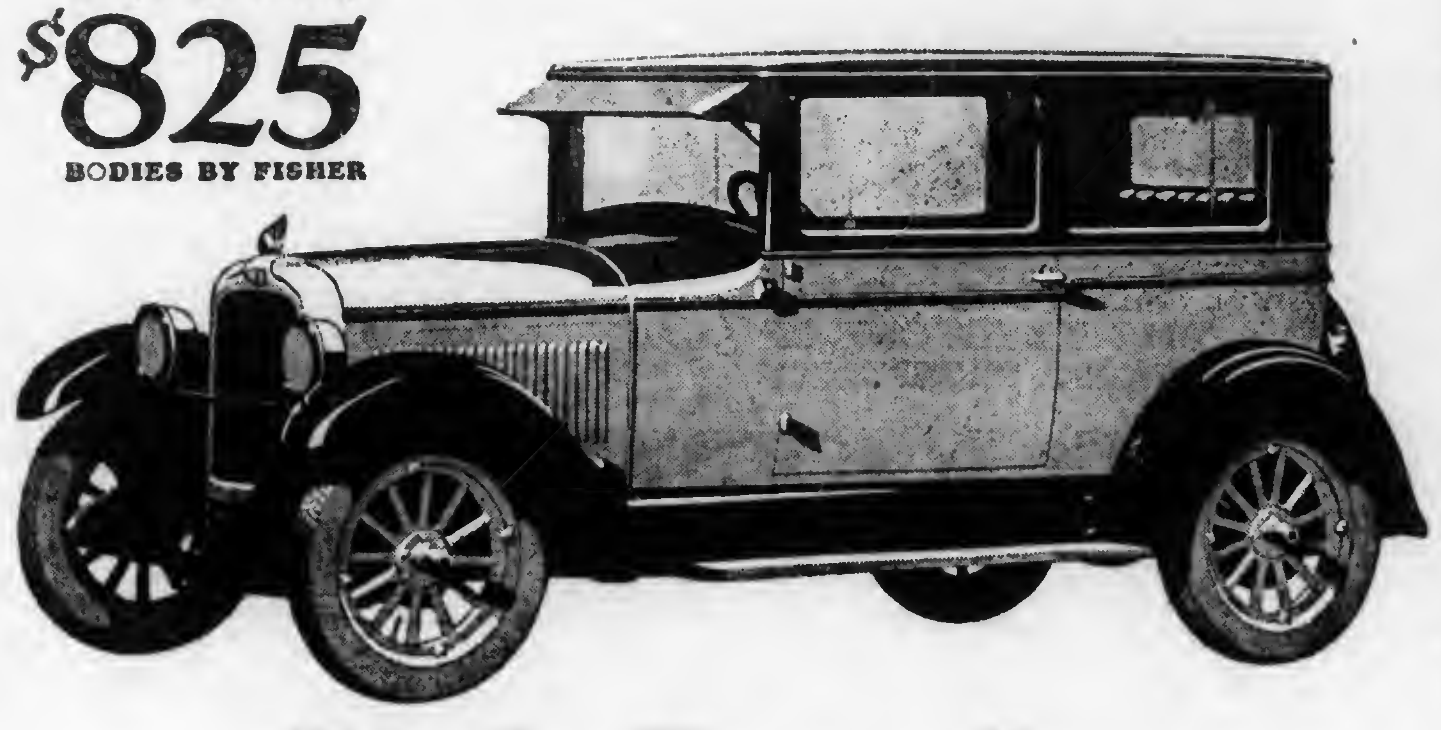
BODIES BY FISHER



Big In Every Sense

Designed specifically to dominate the field of low priced sixes, the new Pontiac Six introduces into that field an element of bigness that is entirely new.

It is a big car in every sense of the word—big in the size of its powerful six-cylinder engine; big in the roominess of its well proportioned Fisher Body; big in the restful comfort it provides at top speeds over country roads; big in the stamina, long life and durability resulting from its quality construction—

—and biggest of all in the startling value it offers—a value that is unmatched, because only General Motors could achieve such quality at so low a price.

Six Reasons for Unadilla Leadership

It doesn't *just happen* that more Unadilla silos are sold each year than any others. Here are six of the reasons:

A Unadilla cures and *keeps* silage better.

The air-tight *fitted* staves defy frost and save all the valuable silage juices.

It is strong, durable, well-built of *selected* lumber.

The famous Unadilla ladder makes for the greatest silo *safety* and *easy use.*

Every hoop can be taken up 12 inches *at the door front.*

Continuous opening at feed level. You just *push* out the silage.

Order early while the factory is not rushed and effect a real saving of money. Liberal discount for cash.

Write for our silo catalog; containing information on our strongly built storage tanks, water tubs and vats.

The Truth about Contagious Abortion

The Bang Bacillus Disease Is Causing Heavy Losses to Pennsylvania Dairymen

By J. N. ROSENBERGER, V. M. D.

SOON after the microscope began to be used in medical laboratories, animal and human diseases were separated into two classes, infectious and non-infectious diseases. The infectious diseases are often spoken of as contagious and transmissable diseases. An infectious disease includes all that class of ailments where a specific micro-organism, bacillus or germ causes the disease. The following are good examples of transmissable diseases: tuberculosis, hog cholera, lock jaw, foot and mouth disease and contagious abortion.

Contagious abortion disease in cattle is often called slinking of calf, premature birth or abortion. This disease would be better described by its more proper name if it was called "Bang Bacillus Disease." The specific bacillus (germ) which causes Bang Bacillus Disease in cattle was discovered by a Danish scientist named Bang in 1896, fourteen years after Professor Koch discovered the bacillus (germ) which causes tuberculosis in cattle. In 1890 Professor Koch invented tuberculin, now extensively used in testing cattle for tuberculosis.

Long before the discovery of the cause of Bang Bacillus Disease, history shows that dairymen suffered heavy losses from it. In spite of the relatively greater economic importance of Bang Bacillus Disease, as compared with tuberculosis, less progress has been made in eradicating it. It is a no-visible-lesion disease. It is true that visible lesions are not always found in animals reacting to the tuberculin test, but in the great majority of cases, lesions are found.

Consider It As Blood Disease

Bang Bacillus Disease is better understood by the laymen, when they consider it more in the light of a blood disease. It is not, therefore, so easy to demonstrate its presence and this, perhaps, accounts for a part of the lack of progress made in eradicating abortion. It is certainly responsible for the great lack of interest on the part of public health authorities.

There is sufficient evidence at hand to indicate that Bang Bacillus Disease is of public health importance. This germ has been accused of causing rheumatic fever in both animal and man. Some experimental work tends to show that it plays an important part in causing other human ailments.

While there are proponents and opponents as regards the public health importance of this disease, all who know anything about it are agreed that it is the most destructive disease with which the cattle breeder must contend. It is estimated that this disease causes annually losses in excess of those caused by tuberculosis. Carefully kept herd records show that this disease often wipes out the value of an entire herd in a period of less than five years.

With such stupendous losses, dairymen as well as sanitarians should take definite and positive steps to protect clean herds against Bang Bacillus Disease. While the disease can be eradicated from infected herds by means of the blood test used in connection with sanitary measures, it often requires more than a year to do so and may even mean the sacrifice of many valuable animals to accomplish it.

The disease is most often introduced into clean herds thru the purchase of infected animals, tho there are other possible means of introducing it into a clean herd, such as using unpasteurized, infected creamery products. On the other hand, it is surprising to know how easy it is to keep the disease out of a clean herd when a few simple rules are followed.

No animal should be added to any clean herd until after passing at least two properly conducted negative blood tests, made on unbred cattle. Notwithstanding this most important fact, many herd owners expect one blood test, even on pregnant animals, to tell the whole story. This is not possible.

Getting rid of one disease only to contract a worse one is like stepping from the frying pan into the fire, yet that is what dairymen often do when purchasing new animals to take the place of those which reacted to the tuberculin test.

Eradicating tuberculosis in herds of cattle where the extent of the disease is small offers no particular restocking problem, whereas, eradicating the disease in herds where it has gained considerable headway—infecting a third to half the animals,—offers a very serious restocking problem. With pastures fenced, silos built, and often partly emptied, stables completed to carry, say twenty head of cattle, the removal of thirty to fifty per cent of the herd creates an additional loss to the owner to that arising from condemned animals.

Coral, a product of the Guernsey farm of Walter W. Little, Baltimore County, Maryland.

Must Buy New Stock to Balance Things Up

Placing the overhead expense arising from unbalancing the herd with dairy equipment, makes one animal carry the overhead expense which two animals should bear. This uneconomic condition forces the farmer to go into the market for additional cattle in order to again balance the herd with the equipment.

An old saying is "A burnt child dreads the fire." These men look out for tuberculosis when purchasing additional animals. They want no more tuberculosis on the farms. But many of them, while insisting on having cattle free from tuberculosis, pay little or no attention at all to having cattle free from Bang Bacillus Disease. Few, if any, of them even use the blood test as a means of avoiding the introduction of this, more to be dreaded, disease into their herds.

The writer knows personally of several cases where following a heavy loss from tuberculosis a still greater loss was caused by introducing Bang Bacillus Disease into the herd. In one case all the cattle were destroyed on account of tuberculosis. When restocking all but two animals were carefully blood tested. Ten days after adding the two untested cows one of them aborted. Two weeks later the other aborted. Laboratory examinations verified the presence of Bang Bacillus Disease.

In spite of all effort to keep the disease from gaining entrance into the main herd, every cow aborted during the first year except one. Fully half the animals aborted the second year. While less and less abortion has occurred each succeeding year,—at the end of five years, still a few cows abort. During this period six well-bred animals were sent to the butcher on account of sterility attributed to abortion. Six other valuable cows still remain positive to the blood test and for this reason alone cannot be sold to good advantage.

The owner figures that his loss already exceeds $3000 on the thirteen original animals purchased and later infected thru the careless purchase of two animals which had not had the blood test.

To avoid repeating this owner's unfortunate experience read and study carefully Bulletin 404, written by Doctor M. F. Barnes, specialist on abortion for the State Bureau of Animal Industry, which may be obtained from the Pennsylvania Department of Agriculture, Harrisburg, Pa.

Horse Collars

THE upper part of a horse's shoulder is soft bone and cartilage. The lower part is the joint. The pull of the collar should come between these two points or there will be trouble. A collar that hangs too low throws too much strain on the shoulder joint and may cause lameness in the lower point of the shoulder, and a collar that throws too much strain against the upper shoulder muscles may cause fistulas, galls, etc.

If you want your teams to pull their full load thruout the season without suffering or being laid up with sore shoulders, examine the collars on your horses to see whether they fit properly or whether pressure is too low or too high. A collar that fit last fall may be so tight in the spring that it will choke the horse and a collar that fits now will be too loose later in the season when the horse has been worked down by the spring jobs, so it is advisable to examine the collars occasionally and make sure that they continue to fit properly. If you use a sweat pad in hot weather see that the collar allows room for it without choking the horse. Otherwise, your remedy may be worse than the trouble.

Points to Observe When Buying

Because of the difference in the neck of the modern heavy type draft horse and the old fashioned horse the collars are not made the same. Be sure that the collar which you buy is designed for your horse and is well made. A poorly made collar may fit when new but it will lose its shape quickly when used.

Leather of the best quality, hand-stretched before cutting, tough, long rye-straw for packing, are marks of a good collar. A collar stuffed with chaff, or short broken straw, cannot hold its shape under the stress of hard work.

In order to save trouble and delay in rush seasons it always pays to buy good harness.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Without true friends the world is but a wilderness.—Francis Bacon

Facing the Facts

THE publication of the article which appears on page three of this issue is nothing less than a painful duty. Dairymen have too many troubles now, with the tuberculin test, new sanitary regulations, western competition, and a lot of other things to worry about. But the facts about contagious abortion are not changed by ignoring them. There is nothing to gain and everything to lose by refusing to face the issue now while strenuous efforts are being made to put dairying on a sound basis.

Political Advertising

IT OUGHT not to be necessary to state periodically that political advertisements carried in Pennsylvania Farmer convey no endorsement on our part of the candidate or party. The advertisers tell their story and pay for the space the same as other advertisers. We reserve our right to knock or boost any candidate, party, or platform as we see fit. Political advertising in newspapers has taken the place of the old time political rally, which was the method of getting political ideas before the people a generation ago, and we believe it is a better way of doing it.

Bad Milk in New York

MILK and cream have gotten mixed up with some of New York's dirty politics and an effort is now being made to clean up the resulting unsavory mixture. It is reported that some of the lesser officials in the city's milk inspection system discovered that it was a comparatively simple matter to extort graft money from the smaller dealers by threatening to take away their licenses if they didn't "come across." In return for the graft money the officials looked the other way when those same small dealers imported milk and cream from sections which do not live up to the sanitary regulations imposed upon dairymen in the New York territory. Improved transportation facilities have made it possible to ship milk a thousand miles or more. So it was an easy matter for crooked buyers to go out in the Middle West and pick up anything that looked like milk or cream, without regard to its quality, and ship it into New York at less than the cost of producing first class nearby milk under strict health regulations.

The most important result of this whole affair is that it has made eastern milk producers realize that this talk of competition with western milk is not just somebody's pipe dream. Eastern dairymen of the future will have to work out their own salvation by learning to make the most of their one great advantage,—their proximity to the great consuming centers.

Now They Spray Eggs

COMMENTING on the current egg market situation, Mr. J. C. Huttar, of the Cornell University Poultry Department, makes these observations on the competition in New York between nearby and Pacific Coast eggs.

"The eggs which have come all the way across the continent have commanded higher prices for the best grades than the best nearby eggs could get for the past two weeks. While a good many of the western eggs are now diverted from New York to other markets, the next two to three months receipts for the former city have been contracted for already. In fact, the demand for these eggs is so great that auction sales have been discontinued since March 6th.

"In my opinion two factors are largely responsible for their reputation and popularity. Firstly, the strict and reliable system of grading, selection and packing is now well known and can be depended upon. And secondly the treatment of all eggs with an oil spray before they are shipped East retains the quality for fresh consumption as it retards evaporation and deterioration and greatly increases their storage qualities. In fact, storage men prefer these eggs to our freshest state eggs."

Reduce the Delivery Costs

IT IS estimated that the food which appears on a city family's table costs about two and one-third times as much as the same food on a farmer's table. The extra cost is due to transportation, storage and distribution. Evidently, that difference is too much. It puts a heavy tax upon the city consumer and reduces the price which the producer receives for it. Without question, the biggest economic problem before the public is the reduction of distribution costs. How shall it be solved? It probably will not be until there is an understanding of the fact that the problem is a mutual one; that the city consumer and the country producer must tackle it together as they have done in some European countries. As long as farmer cooperative associations are looked upon by city people as menacing their rights, and as long as consumers' leagues are suspected of being wholly selfish, little progress will be made. But when the two classes get wise enough to sit down together and work out a cheaper plan than the present one, there will be some prospect of reducing the costs of distribution.

Be a Real Citizen

THE primary election in Pennsylvania will occur on the eighteenth of May. That day will show just how many people there are who appreciate their citizenship. Every one who does appreciate it and feels a citizen's responsibilities will go to the polls and vote. He will not consider plowing, harrowing and planting more important than voting. Not in recent years has there been a more important election. The results of the coming election will show the world whether or not the whole state is "corrupt and contented" as a writer once said of Philadelphia. The worst political machine in the state is making a Herculean effort to get control of the entire state. If it does it will be because the so-called "best people" neglect to register their sentiments in votes. A voter who stays at home on election day gives half a vote to the opposition. Sins of omission are as black as sins of commission.

Sign Your Name

IN SPITE of the frequent requests which we make to letter writers to sign their names to letters and articles we continue to receive many signed with nothing more than the initials or a pseudonym. It is a universal rule among publishers to insist upon the right name of a writer, altho an assumed name may be used in the published article. A little thought will show the reason for this rule.

We answer a great many questions direct during the year, altho only a small proportion of them are published in the paper. This is because the questions are only of minor importance, or because they are purely personal or local in their application. When such letters contain no name and address no answer can be sent, yet the writer probably censures us for neglecting to answer. Another kind of letter sometimes received is one attacking some person, official, party or class. The writer of this kind of letter usually fails to sign his or her name. Of course, such communications go into the waste basket.

When Will Others Follow?

TWO weeks ago we made note of the announcement of a large Philadelphia milk distributor that all of its milk is now secured from tuberculin tested herds. The reaction to that announcement, and the warning of another large distributor to the effect that all of its producing herds must be tested before a certain date, has been about as expected. Requests for the test come in from the affected areas much faster than the Bureau of Animal Industry is able to take care of them.

The question now facing dairymen is this: Will other Pennsylvania cities put up barriers against milk from untested herds, now that they have seen how these Philadelphia distributors have been able to secure a large volume of tested milk? The answer to that question is exceedingly important to the man whose herd hasn't received the tuberculin test.

Proper Feeding of Chicks

THE widespread change in the methods of raising chicks as compared with those of former times makes necessary a different and better system of feeding baby chicks. When a brood of little chicks was hatched by old Biddy she took a large part of the care and responsibility. She selected much of their food and she knew what they needed. The result was that they usually lived and thrived right from the start. Now, when the great majority of chicks are hatched in incubators and mothered by a brooder, the selection of their feed depends entirely upon human beings who are frequently not able to choose the right combination. For this reason most people would do better to buy ready mixed feeds from those who have made a careful study of the matter and whose experience teaches what is the best. We write this, not for the purpose of boosting chick feeds but in the interest of those who have trouble in raising their chicks because of feeding troubles.

Washington Letter

ANOTHER FARM RELIEF BILL.—A farm relief bill carrying the recommendations of Secretary of Agriculture Jardine has been introduced in the House by Representative Tincher and in the Senate by Senator Capper, of Kansas. It provides for a federal advisory board and a farmers' marketing commission. The machinery for its operation is similar to that provided in the Corn Belt committee bill.

The commission is to keep advised upon all matters affecting trade in farm products, determine by surveys whether a surplus exists and upon request advise with cooperatives as to the marketing of agricultural products. Its chief function, however, is to make loans to cooperatives.

FARM POSTAL RATES.—A bill providing for the reduction of postage rates on farm products has been approved by the Senate Committee on Post Offices. It provides that the Postmaster General may direct that the rate of postage on farm products mailed directly from farm, orchard or garden for delivery at the post office from which such routes start, or on such route shall be one-half the regular rate otherwise applicable. It also provides that the Postmaster General may allow rural carriers a commission to be fixed by him, on the postage so received for the service in addition to the regular salary for a period of three years. This is another attempt to stimulate direct producer-to-consumer marketing.

BUTTER PRICE STILL ON DECLINE.—Notwithstanding the increase in the tariff duty on butter from eight to twelve cents a pound, by order of President Coolidge, the price of butter continues to decline. In fact the situation is described as "demoralized" as the fall in prices below 39c at New York on 92 score fails to stimulate buying. Butter production is increasing, however, with a heavy surplus over last year. If present conditions continue, the carry over on May 1 will exceed the holdings on that date of any preceding year by several million pounds.

In the report of the United States Tariff Commission on the cost of producing butter in the United States and Denmark, it is shown that there is a difference of 14.98 cents per pound in the production costs of American and Danish butter, in favor of the Danish producers.

AIRPLANE FOR DUSTING PURCHASED.—An airplane has been purchased by the Department of Agriculture that is especially constructed for experimental work in dusting farm crops to control insect pests. Heretofore, 500 pounds of calcium arsenate in dust form was carried, but this new machine is designed to carry 1000 pounds. Three pounds of the poison are used to the acre of cotton. It is planned to study ways of widening the cloud of dust and flying closer to the plants.

WHAT DO AMERICANS EAT?—The relation of American food production, food distribution, food consumption and the nutrition and health standards of the American family was the subject of a general conference on food habits at the Department of Agriculture, which was attended by many nutrition specialists and home extension workers.

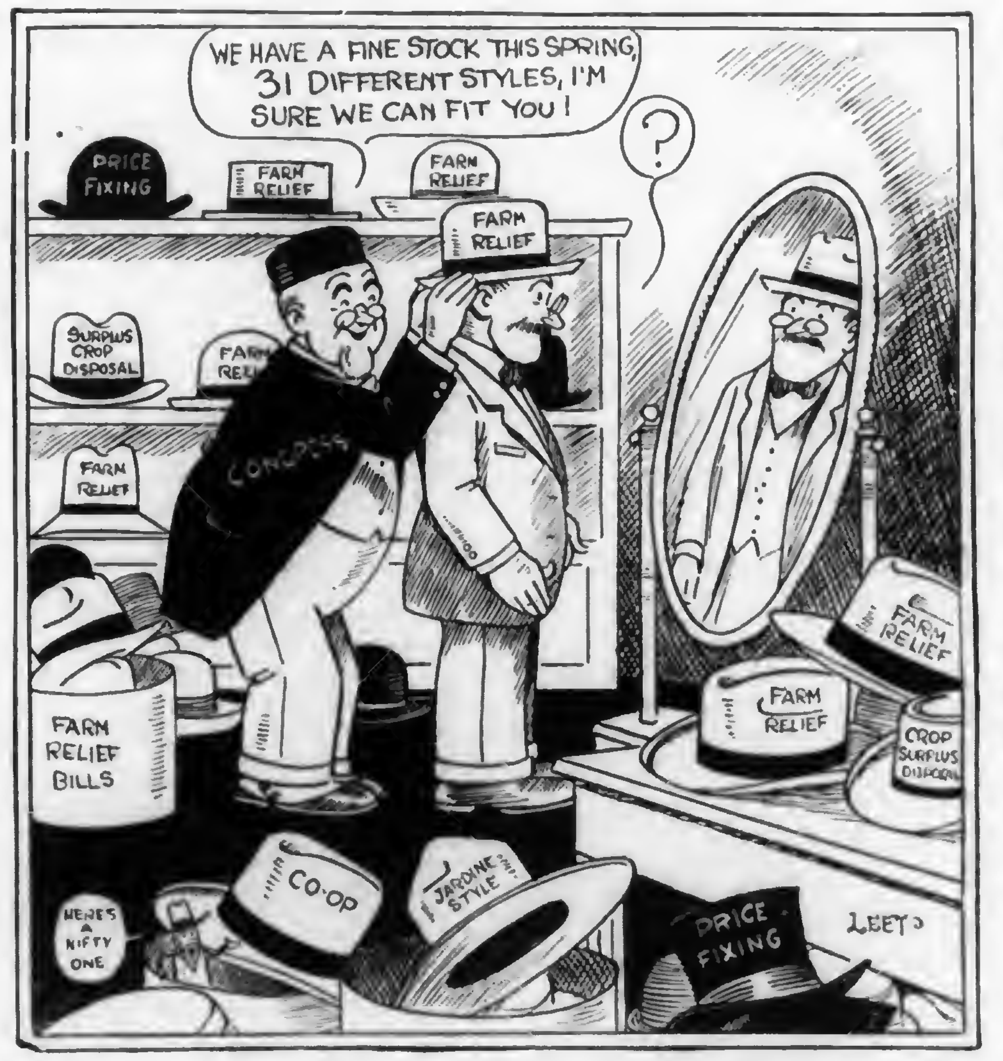
Among the questions discussed were: What is the average American family eating, and how far does it fall short of what is should eat from the standpoint of nutrition and health?

In giving his endorsement to this conference, President Coolidge said that national economy is based upon a combination of efficient production and wise consumption. The home is the greatest consumer of agricultural products. If this consumption is to be guided along lines that make for health and physical efficiency, more detailed facts must be known about present food habits.

COW TESTING ASSOCIATIONS.—This year marks the twentieth anniversary of cow testing associations in this country. Starting with one association in Michigan twenty years ago, there are now 777 cow testing associations thruout the country. Cow testing work is being carried on in thirty-seven of the forty-eight states, and thirty-four states are using the Bureau of Dairying's forms. There were 330,000 dairy cows on test January 1, 1926, being about one per cent of the whole number of cows in the country. Cow testing association work has invariably resulted in a marked increase in average milk production per cow in the herds under test. And with the increase in pounds of butterfat per cow comes a remarkable increase in income over cost of feed. It was the conclusion of the Dairy Bureau specialists as well that the man who does not know what his cows are doing is the one who fails in the dairy business.—E. E. Reynolds.

Harrisburg Letter

HUNTING HANDS.—According to reports coming to state employment offices from counties high on the farming list, labor is in considerable demand and men who have not yet secured skilled hands are out of luck. Several places report need of tenant farmers. Organization of construction forces by road contractors and brisk times in certain lines of industry have taken much of the available labor and state agents say they have been unable to supply all of the requests.



We hope he gets fitted before closing time.

TIGHTENING UP ON BORER.—State agricultural authorities, who have been rather lenient in regard to the quarantine against the corn borer, have been tightening up the lines particularly in communities where the cooperation so essential to successful operation of a campaign against the pest has been lacking. The present plan is to give farmers in the counties quarantined opportunity to get rid of all cornstalks or stubble and make an inspection. Next fall, however, there will be no leniency and the requirements that be enforced with the possibility that regulations may extend to the storage of corn on the ear.

FARMERS DATED UP.—State livestock authorities are not disposed to take seriously the movement launched in eastern counties against tuberculin tests because of the large number of farmers who have asked for inspection. From what is said here the efforts to organize against the testing system have not had much effect and the bureau has engagements for its field force to inspect which will require from six to eight months to fill, as the list stands now. One estimate made at the Capitol is that by the end of the Pinchot administration half of the dairy cattle in the state will have been under supervision. If this works out it would be one of the most remarkable efforts in such work ever known in Pennsylvania.

MUST FINISH OILING.—Orders have been renewed at the State Highway Department for the completion of all oiling on roads before July 1st. It is said the great bulk of the work will be completed by the middle of June and to that end immense quantities of material have been ordered and men in charge told to get the job out of the way before the heavy summer travel starts.

FARMER ON COMMISSION.—Richard E. Reitz, Jefferson County farmer and orchard owner, has qualified as a member of the State Game Commission on which he was appointed as representative of the farming interests. He is the first farmer to be appointed and in a statement Governor Pinchot commends his experience as a game and fire warden as valuable for the state.

GOING AFTER STATIONS.—As a result of the new state laws requiring all dealers in gasoline to obtain permits for the sale of liquid fuels it is probable the next month may see a number of stations disappear from the roads because state authorities plan to vigorously enforce the provisions. There are heavy fines for failure to obtain a permit and dealers who refuse will be forced out of business. All stations are to be inspected by highway patrolmen next month and they will report where no permit is displayed. The state will then sue.

ROAD FORCE FORMED.—The highway force in charge of the patrol work in the Japanese beetle campaign is being rapidly mobilized. It has been formed for active duty this month and meanwhile intensive farm and nursery inspection has been under way so that the men on the roads will be familiar with all lines and the movements of produce can be checked up. A much more successful campaign is anticipated this year than last because of the changed public attitude. A number of automobiles will be used in patrol work—Hamilton, Harrisburg.

New Jersey Letter

TEN FOOT PARKING SPACE.—One of the regulations of the newly organized Farmers' Roadside Market Association of New Jersey provides that standard markets must be ten feet from the highway. The purpose of this regulation is to relieve traffic congestion, provide safety for patrons and give added display opportunities for the owner's products. The association will make it a point that prices must be reasonable and based upon nearby market quotations, due consideration being given to superior quality. The marketing of produce at the stands must be made profitable to both the farmer and the consumer, the association maintains, for permanence in the plan.

OPEN HOUSE FOR EGG PRODUCERS.—In an effort to demonstrate the benefits of cooperative marketing and control of volume during the period of heavy production, the Atlantic Coast Poultry Producers has invited any and all egg producers in the East to use its marketing facilities for the next six or eight weeks. The association is in good shape, has made good progress during the winter, and is using this open house method for increasing membership and volume of products to go thru organized marketing channels.

CANHOUSE GROWERS WANT TARIFF.—Tomato growers in the southern part of the state have united with producers in Maryland and Delaware to demand an increase in the tariff on canned tomatoes. The South Jersey growers, thru the New Jersey Federation, are cooperating with the National Canner's Association and the Tri-State Association to convince Congress of the justice in such action. The Washington office of the American Farm Bureau Federation is also cooperating. Heavy imports of canned tomatoes this last year increased decidedly the already large domestic over-production and serious consequences are to be expected in the future if large accumulated stocks make it impossible for the canhouses to contract on futures.

STATE-WIDE FARMERS' PICNIC. The New Jersey Federation of County Boards of Agriculture and New Jersey State Grange, cooperating, will stage a state-wide farmers' picnic in South Jersey this summer. The date is tentatively scheduled for mid-July, the place and detailed arrangements to be worked out by a sub-committee of the executive committee of the former organization at an early date. Indications are that the location will be at one of the established picnic grounds in either Cumberland, Atlantic or Salem County.—B.

New York Letter

COMMITTEE OF ELEVEN.—Since the selection of the committee of eleven to represent the interest of the five leading factions among milk producers there has been much conjecture as to whether these men will promote the desires of their constituency or their own personal plans, and still, at the same time, develop a plan big and wise enough to protect the industry in general in this section of the country. It is a big order. Some of the men are plain farmers with no experience in the business world. Others are officials of national prominence. The saving factor is that none are self appointed. Each represents the choice of his branch of the industry. This puts the big official on the same basis as the inexperienced producer as it shows that real producers put real confidence in these men. It is a matter of surprise that there has been so far such unanimity of dairymen generally in accepting the simple and comprehensive plan adopted at the first rally of producers, when the full power of the menace of western milk and other influences burst on producers alike all over the state. The committee of eleven are busily preparing for constructive work at their second meeting to be held in Albany early next month.

CATTLE SELL WELL.—A Tompkins County sale of purebred Holsteins last week brought nearly $10,000 for fifty animals. Buyers were present from five states. Nineteen mature cows brought an average of $215 each, while one went for $400. Cows generally are in good demand at good prices, as so many herds are depleted by the tuberculosis test. More and more the buyer, however, demands a high class animal.—M. G. F.

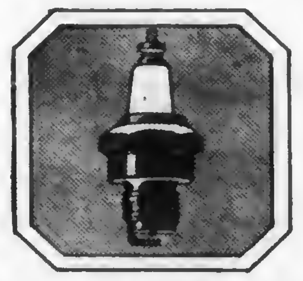
FORD CARBON ARITHMETIC

Why cheap oils cost more than

Mobiloil "E"

FARMERS who use Mobiloil "E" in their Fords, repeatedly report two things: "I use less oil than ever before." "I have less carbon than ever before."

These two things are related. Low oil consumption with Mobiloil "E" means that less oil reaches the combustion chamber. There is less oil to burn and leave carbon. And Mobiloil "E" carbon is a light, dry soot that blows out the exhaust.



More Power on Hills

You notice this new freedom from carbon particularly on the hills. You can drive with the spark further advanced. You go up easier — quieter. You go up on less gas.

Cleaner Spark Plugs

You have cleaner spark plugs. The spark comes free and hot. Full power is assured from the fuel. So you get along faster. You buy new plugs less often. You save on gasoline consumption.

Four Quarts Prove It

Drain off the old oil in your Ford engine. Pour in 4 quarts of Mobiloil "E." Then drive up some familiar hill and note the result. You will find new smoothness in running. As the months pass, you will notice a reduction in carbon and spark plug troubles.

For the differential of your Ford, use Gargoyle Mobiloil "CC" as specified in the Chart of Recommendations. For your Fordson tractor, use Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter. Vacuum Oil Company, Branches in principal cities. Address: New York, Chicago, Kansas City or Minneapolis.

Mobiloil "E" *for* Fords

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

WHEN compared with previous years, the present season is far behind schedule. The fruit bloom was practically over at this time, April 20, four years ago. Today, no tree or shrub has begun to show its colors in the vicinity of Philadelphia. We set 4000 asparagus roots on the sixteenth and seventeenth in the coldest, strongest north wind we ever worked in. It was extremely disagreeable work,—but it had to be done. The soil is in good condition to plow and cultivate but the soil temperature is so low that it is not worth while to plant as seed would not germinate. No doubt the man who prophesied sometime ago that this would be a summerless year is chuckling in ghoulish glee. I hope he will be roasted later.

* * *

MY COMMENTS a few days ago on the overhead costs of maintaining official advisers, inspectors, etc., produced some strong but sympathetic letters. There are those who believe that we should dispense with all such and thus relieve the public of the cost of maintaining them. This is an extreme position and I do not agree with those who think that there is no need for maintaining a readily available source of information. Scientific knowledge in every field has increased so greatly during the past twenty-five years, and this knowledge is so vital to success, that the layman in any business cannot possibly have it at his finger tips. There is need, however, to guard against the creation of positions of this kind so that their number will not be greater than the real needs. The army of censors, advisers, inspectors, teachers, leaders, directors, etc., is already immense with still more seeking positions. Farmers must not imagine that agriculture furnishes the only field, yet no line except public health and public morals furnishes a greater opportunity for official positions.

* * *

ABOUT fifteen carloads of seed potatoes have been unloaded in our home town. This is about the usual amount but they sold at an unusual price,—about $3.75 per bushel. About the usual acreage will be planted if we may judge by the amount of seed bought. Those who plant fifteen to twenty bushels per acre will start the season with the handicap of a high seed cost.

* * *

PRUNING young peach trees is a much more tedious job where the Oriental peach moth worked last year. The moth bores into the soft ends of growing twigs, causing the ends to die and drop off. Then two or three new branches start out, making it necessary to do more work in pruning. Besides this, the growth of the branch is somewhat dwarfed because of the setback. We are giving the peach an early and thoro cultivation this spring with the hope that many of the larva may be destroyed. Our orchard is not heavily infested, but we had enough to show what the moth is like.

* * *

WE ARE planning to use the ground in which we had late potatoes last year for cantaloupes. (It may be remembered that I started out to teach the public that the right name is muskmelon, but I did not succeed.) The piece was sown to rye last fall and this is making a fair growth. It will be plowed down a couple of weeks in advance of planting and the ground thoroly cultivated. Our unusual success last year in raising and selling cantaloupes encourages us to extend our acreage this year.

* * *

A YOUNG man applied for a job at Neshaminy Gardens the other day. He said he could run the tractor, the car and the truck and do anything that was to be done. That sounded all right, even tho he didn't look it, but he wanted four dollars a day! We let him look elsewhere. He said he could get it on public works. I suppose he can, but the incident is illuminating to the whole matter of farming in these days. No kind of farming can pay four dollars per day to all who are engaged in it, and because it will not, farm workers are leaving the farms at the rate of half a million a year. When and if this inequality is remedied the whole agricultural question will be solved.

THE CHEERFUL PLOWMAN

Pete, the Speeder

OUR Pete has tackled speeding and driving fast as sin, tho that is not his breeding nor has it ever been. Just how he got the habit, St. Peter only knows, but going like a rabbit in chase behind its toes, has been Pete's custom lately, it has as sure as fate, he will not drive sedately, he has "the bug" of late. Last night young Otto Winety whose car has mighty power came down the trail at ninety, or eighty, miles per hour. In turning he went smashing against a picket fence, the busting and the crashing was startling and intense; a wheel was knocked to slivers in two small seconds' time,—it gives my soul the shivers to witness such a crime,—and Otto, badly shaken, with ribs and rafters split, was gathered up and taken to Bingville—think of it!

"Look there!" I said to Peter with all the force I had, "That chap, you see, was fleeter and smarter than his dad! He thought space needed killing, he had no time to spare, he couldn't stand for milling between the here and there! When he was there, poor jigger, and wanted to be here, he thought to pull a trigger and split the atmosphere!

"Well, Pete, you see the folly of such a state of mind; it busts up men, by golly, and leaves its wrecks behind! This space that's all about us has rights the same as we, and it can beat and rout us at times, as you can see! Don't try to murder distance! It can't be done, that's all! It puts up stiff resistance and never takes a fall!"—J. Edw. Tufft.

Will You Wear Vare's Yoke?

Shall He Control This State
and
Be Your Spokesman in the U. S. Senate?

Is home rule and representative government to prevail, or shall the domination of commercialized politics be fastened upon every county and community in Pennsylvania?

The decent Republicanism of Pennsylvania has been challenged. Bill Vare, head of the Philadelphia Machine, seeks to gain control of the Republican Party of this State in the Primary of May 18, and at the same time have himself nominated for the United States Senate.

This is the real purpose of the Vare-Beidleman Combine.

That is why the bosses tried to lull you to sleep in this campaign by discouraging local contests. They thought they could get you to stay out of the Primary. They didn't want the country vote to cut down their machine-controlled city majorities.

For years the ballot-box frauds of the Philadelphia Machine have been off-setting your vote.

Are you going to permit the nomination of Vare to the United States Senate, and of his ally, Beidleman, to the Governorship of Pennsylvania?

You know the cost of loose and wasteful administration by professional politicians.

If you don't want the Vare-Beidleman Combine to control this State and the millions that will be spent during the next four years for your roads, schools, charities, etc.—

Paint that *wears!*

THE Dutch Boy trademark guarantees your getting lead paint of the highest quality. There are also made under this trademark: flatting oil for use with white-lead in decorating interiors; also red-lead, solder, and babbitt metals.

PAINT has a hard life. Storms rage against it. The sun beats down mercilessly on it. The important question is, "What paint can I use on my farm buildings which best resists the attacks of the weather?"

To many farm-owners the outstanding fact about Dutch Boy white-lead paint is its ability to stand up against the weather. This paint made of Dutch Boy white-lead and pure linseed oil wears—and wears—and *wears.*

The tough, moisture-proof, elastic covering of Dutch Boy white-lead paint is long-term insurance against decay. It protects property and keeps it protected. It is an all-lead paint, and it is the lead which gives paint its weather-resisting qualities.

Invest in Dutch Boy white-lead paint the next time you paint. You can get at a remarkably reasonable cost the complete protection this paint gives. One hundred pounds of Dutch Boy white-lead makes seven gallons of pure lead paint.

Write for new paint booklets

"Decorating the Home" is a new free booklet, illustrated in color, which suggests decorative treatments for exteriors and interiors. It will be sent you, along with a booklet that gives complete directions for painting wood, plaster, metal and masonry about the farm, if you will write our nearest branch for Booklets F.

Garden and Truck Crops

The Market Pays Well for Quality and Bunching

DEALERS and farmers are complaining that the market for rhubarb does not seem to hold up as well as in the past and that prices are lower. They offer numerous explanations, such as more liberal supplies caused by increased acreage.

The greater variety of southern and western vegetables that come into the early markets may affect the demand to some extent. Hothouse rhubarb, principally from Michigan, is now offered in Philadelphia during the winter months and in the spring California begins to ship carloads of rhubarb to this market. The combination of both hothouse and California stock seems to take the edge off the market for the nearby stock.

All these are conditions that affect the market but there are some farmers who manage to get top prices for their rhubarb all thru the season. The reason for this is that they grow a high quality of rhubarb and secondly because they pack it attractively in a way that the buyers prefer.

Put Plenty in Bunches

It does not pay to be stingy in bunching the stalks. The bunch should be of a size that can be grasped with the thumb and forefinger. When the rhubarb has developed this will run from about three to four stalks to the bunch. Small bunches never bring the price of full ones and on a poor market an extra stalk may sell your rhubarb when otherwise it would go begging. Some of the best growers recommend that the depressed side of the stalk should be turned in when making the bunch. The outer side is of a darker red color, which is preferred by the buyers. This practice also makes a better shaped bunch. A variety that produces dark red stalks is best when shipping to Philadelphia.

The bunches are usually tied with twine close to each end and dealers generally prefer that the entire leaf should be left on the stalk, as it is more attractive and the rhubarb keeps better. The trade desires that the bunches be tied in bundles of twenty or twenty-five. There is some difference of opinion as to which number is preferable. Some dealers prefer to have bundles of twenty-five early in the season when the stalks are small and twenty later in the season, but in general the twenty-five bunch package seems to be the most popular.

The reason that this number or unit is preferred is because in most cases the rhubarb is sold in lots of 100 and either four or five bundles are required to make up the order. It simplifies bookkeeping and helps the dealers keep their farmers' accounts straight. The bundle of twenty-five is convenient to handle and is popular with both large and small retail stores.

A Matter of Preference

Some of the best rhubarb that comes into this market is alternated in the bunches. In making the bundle the first bunch is placed with the leaves at one end and the next is reversed, and so on. Other growers place all the leaves at one end, but this is largely a matter of personal preference. The latter method has one advantage in that when a dealer is forced to carry some of the stock over for another day, he stands the bunches on the concrete floor and sprinkles the tops. This freshens the rhubarb and it has a much better appearance than it would have otherwise.

Some of the rhubarb that brings top prices is packed in bundles, tied with red tape and a printed label wrapped around it. The advisability of this practice is the same as with asparagus. When the output is sufficient to warrant the expense and a high class product is packed it pays.

The points given above are not theory but are the opinions of men who handle fruits and vegetables every day in the year, and have seen them proved in hard cash.—W. R. Whitacre.

RADIO DEPARTMENT

Which Aerial Better?

Will you kindly give me a little advice concerning the aerial for my radio? I have been told that an underground aerial either laid in a coil four feet deep or laid straight eighteen inches deep would give better results than any aerial up in the air. Is this true?—N. S., Sullivan County, N. Y.

It is not true that the underground aerial would yield the results to be secured from an overhead, outside aerial. Specially sensitive receiving apparatus is usually required for the underground aerial.

However, if you live on the top of a very steep and abrupt hill, an underground aerial is very good with an ordinary set and is useful inasmuch as little static is picked up on it.

For ordinary use, the underground wire picks up less static and also fewer signals, so that it would be useful only for strong nearby stations. The underground aerial composed of about seventy-five feet of heavily insulated wire, buried six inches to one foot beneath the surface, is best, and it should not be coiled, but laid out straight. I do not think you would be satisfied with the results, however, as compared to a good overhead aerial.—B. F.

Difference in Sets

What is the difference between a generating and another set which is called the neutrodyne?—F. D., Dauphin County Pa.

Most radio receiving sets, which are capable of being adjusted to a fine point of maximum sensitiveness, may generate electrical oscillations that may be radiated from the receiving aerial wire and interfere by causing whistles in someone else's receiving set. Ordinarily, a neutrodyne set does not do this, but under certain conditions, where the set is not well made, or is put out of adjustment in some manner, it may cause such interference.

You can readily tell when your set is causing interference. In that case, there will be whistles changing rapidly in pitch as you move the dials. Any whistles you hear that are not affected by your own dials are caused by other sets or conflicts between two broadcasters.—B. F.

Small Fruits to Grow in the Home Garden

WE HAVE heard much recently about the blueberry, mainly because of certain extensive and successful commercial plantings in New Jersey. As a garden fruit, however, it has not yet arrived, chiefly because it succeeds only on acid soils. Most garden soils are alkaline. Blueberries can be grown on these soils after a fashion by digging a trench about four feet deep and two feet wide and filling this with a mixture of sand and swamp soil.

The acid condition of this soil is maintained by mulching heavily with leaves, never with stable manure. The plants begin to bear the third year and some of the improved varieties, such as Rubel are half as big as grapes and of delicious quality. In course of time alkaline-tolerant varieties may be developed, but just now garden blueberry culture is seldom practicable.

The dwarf Juneberry, a species related to our common Shadbush, has edible berries which some people have deluded themselves into thinking are like blueberries, and have called the "Garden Huckleberry." It is hardy and bears well but the fruit lacks the spicy flavor of the blueberry and the birds get most of them.

The Tree Cranberry

Another fruit of alluring name, the "Tree Cranberry," is closely related to the common snowball. It is attractive in flower and bush and the red, sour berries make fair jelly, but are by no means equal to the real concomitant of a turkey. It is worth growing as an ornamental, however. Several other native species of small fruits, such as the elderberry may be brought under cultivation soon. The gardens of the next century will be enriched by these newcomers.

Perhaps it might be well to mention one disadvantage of the small fruits—the birds love them almost as much as they do cherries. The earliest and biggest strawberries, and many of the later ones also, go to satisfy the voracious appetite and epicurean taste of the robin, catbird and other feathered thieves. So it is with raspberries, blackberries and currants, especially in a dry season.

In his wrath, the gardener is tempted to take down the shotgun. That is a poor corrective, for it is against the law to kill songbirds, and we would not care to be without their music and friendly companionship. Moreover, the birds do more good than harm, by killing countless insects. Sometimes a commercial small fruit grower may be forced to take stern measures to protect his crop, but the home gardener will shoot merely to scare away, not to kill. He may find it better to cover the bushes or vines with netting. It will do no good to set up a scarecrow, except to give the birds a laugh.—S. W. Fletcher.

Pennsylvania's Corn Crop

LANCASTER, York, Berks, Chester, Franklin, Cumberland, Bucks, Adams, Montgomery and Dauphin Counties, ranking in the order named, produced almost half of Pennsylvania's 1925 bumper corn crop, according to the State Department of Agriculture. The total production in these ten counties was 32,492,134 bushels with the total production in the state aggregating 72,470,814 bushels.

The adaptability of these counties to corn production is indicated by the fact that their average yield per acre was 56.4 bushels in 1925 or more than five bushels above the state average of 51 bushels. Likewise, the average acre yield in these counties is greater than that of any state, not excepting the famous Corn Belt region where the yield was about 43 bushels in 1925.

Practically the entire corn crop is fed on Pennsylvania farms and goes to market in the form of meat, dairy and poultry products. While the average farm price per bushel was estimated at 80 cents in 1925, as compared to $1.20 in 1924, the farmer who has been in position to feed his 1925 crop, is realizing substantially more than the farm selling price.

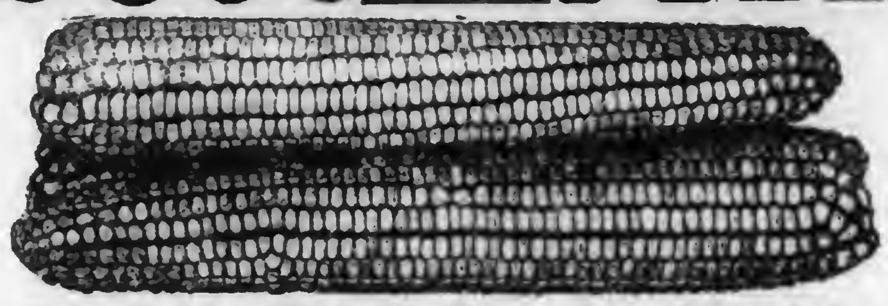
The following table gives the ten leading counties in total production with their estimated acreage devoted to corn, their average acre yield and their state rank in acre yield.

County	Total production	Acreage	Average yield per acre
Lancaster	6,978,170	100,550	69.4
York	4,752,926	86,260	55.1
Berks	3,143,920	60,460	52.0
Chester	3,092,877	60,290	51.3
Franklin	2,984,634	58,180	51.3
Cumberland	2,877,160	50,300	57.2
Bucks	2,650,870	44,930	59.0
Adams	2,399,696	43,160	55.6
Montgomery	1,920,205	33,050	58.1
Dauphin	1,691,676	30,870	54.8
Total	32,492,134	568,050	56.4
State total	72,470,814	1,420,590	51.0

A blueberry plant as cultivated in New Jersey.

Seed Corn

Sound Germination



"Lancaster County Sure Crop" Variety

HERE is seed for you, selected from our best corn-crop in many years. And it is the best-liked, most valuable double-purpose (crib and silo) variety. Indeed a sure cropper. True-to-name, cleaned, graded, tested, sound seed. And it costs you only 30c to 40c an acre!

Makes Rich Silage—Good for Husking, too

When planted for the silo, makes heavy tonnage. Fodder tall, very leafy, specially good in dry seasons. Makes silage of highest feeding-value, very nutritious. Endorsed by many leading State and Federal Authorities. Adopted by many hundred leading feeders and dairymen of Pennsylvania, New York, Ohio, New Jersey, Maryland, New England States, and others. Gaining many new friends every year. It does fill the Silo!

Husks out extra well. Makes good hard corn ahead of many other varieties. Averages about 110 days—used well into the north. Easy to husk. Makes very few nubbins. Ears are long, rows closely set, cob thin, grain rather squarish—a rich yellow with a sort of reddish cast between the rows. Tests show high protein content—greatest feeding value. Doesn't need the richest soils—does well there of course, but succeeds on many poorer soils where other corns fail. Its ability to produce well under unfavorable conditions, accounts for much of its greatness today. 66 to 68 pounds of ear corn easily shells a bushel of grain. Not a prize-winner for appearance, but "Lancaster County Sure Crop," for feeding quality and yielding ability, will compete with any corn. It does fill the Crib!

Order Today—Immediate Shipment Guaranteed

When the seed arrives, it must please you, or return it and we'll return your money. Test it if you like—our tests average close to 95%. Prices: per bushel (56 lbs.) $3.00; ½ bushel $1.75; peck $1; ½ peck 60c. All bags free. Postage extra. Express collect. Freight paid on shipments of 300 lbs. or over to any railroad station in Penna. Ohio, New York, Maryland, New Jersey, Delaware, Virginia, West Virginia, Mass., R. I., and Conn.

Putting *Teeth* in Separator Claims

TALK is cheap; and it is easy to make extravagant claims, whether or not they are justified. This is true of cream separator claims. If there is the slightest doubt in your mind which separator really does skim cleanest, just try this simple test:

Put a De Laval side-by-side with any other separator of approximate capacity. Your De Laval Agent will gladly arrange this test. Mix 20 gallons of milk thoroughly and let it stay at normal room temperature. Run half through each machine. Wash the bowl and tinware of each machine in its own skim-milk, without the use of water, and mix the skim-milk. [Some separators retain more cream in the bowl than others.] Then run the skim-milk from the other machine through the De Laval, and vice versa. Weigh and test for butter-fat the cream that each machine gets from the other's skim-milk.

When you do this you will know beyond question of doubt that the De Laval skims cleaner, is the easier to turn and the more profitable to own.

The new De Laval is the best cream separator ever made. It has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is *guaranteed* to skim cleaner. It also runs easier when separating and lasts longer. It is the crowning achievement of 48 years of separator manufacture and leadership.

NEW YORK'S GREATEST PUBLIC AUCTION SALE

225 Registered Holstein-Friesian Cattle

all go at your price under the hammer

Earlville Sale Pavilion, Earlville, N. Y.

May 10, 11, 12, 1926

Sale starts every morning at 9:30 A. M.

Every Animal from a Herd under State and Federal Supervision
Many Fully Accredited—60 day retest

100 Fresh cows and heavy springers
75 bred and open heifers

Not a blemished udder—not a blemished animal—just a great aggregation of outstanding foundation animals. You can come to this sale, and buy as many as 20 yearlings all by one sire—from a herd in which there never was a reactor.

You can buy cows with official records—you can buy animals that are the result of years of careful breeding.

Cattle pass your inspection on a shavings ring, in a warm comfortable sale pavilion, buy from a wide selection, and they will sell at prices any dairyman or breeder can well afford to pay. All loaded, fed, bedded and shipped gratis.

YOU MUST HAVE ONLY THE MAXIMUM PRODUCERS to stay in the dairy business and make money today. You can buy them in this sale—these cattle have been selected—they are typy, they carry nice udders, they have the size, and they will be fitted to go right into your herd and make money.

YOU BUY THEM FROM THE HEART OF THE GREATEST HOLSTEIN BREEDING SECTION in the WORLD—where they have been breeding Holsteins for years, and where many of the herds average well over 10,000 lbs. of milk in a year.

About 40 different breeders consign to this sale animals they are proud of, and willing to stand back of.

A Bull to Fit Every Pocketbook

I have obtained two dozen of the finest bred bulls in the state, from dams with records as high as 35 lbs., and 34.80 lbs. at 3 years, and then I have others who are backed by rich blood lines for generations, whose individuality, and breeding make them desirable to head good grade herds.

You can buy bulls for any price you want to pay and get your money's worth in quality.

Earlville is located on the boundary line between Madison and Chenango Counties. It is located on three railroads; has splendid shipping facilities, and if you will notify me that you wish quarters in Earlville I will arrange to give you excellent homes in which to spend the night. There are also hotels, and two just five miles North and South.

An instructive entertainment will be provided on Monday night of the sale, and an 11 reel "Movie" Tuesday night, lots of music and singing both nights. No loss of time—something doing all the time.

Make this your vacation—combine business with pleasure—bring along the family and the neighbors, and attend this sale. Write at once for catalog if you are interested, to

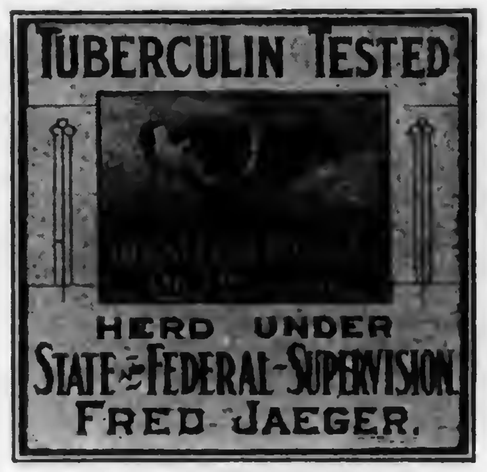
Milk Thickens

We have one cow in good health. The milk is cooled as soon as milked, but after it is in pans about two hours it turns thick, while still sweet. Only the morning's milk does this. The night's milk is all right.—J. W. F., Salem County, N. J.

The thickening of your milk is probably due to a particular species of bacteria, which, according to bacteriologists, secretes two enzymes, one of which has the power of curdling milk, the other of digesting it.

It is only occasionally when the lactic acid organisms are in a minority or when for some reason their action has been suppressed, that the curdling type of bacteria manifests itself by curdling the milk while sweet. The curd thus formed differs from that produced by ordinary lactic acid bacteria in being rather soft and slimy.



The Holstein breeders of Passaic County, N. J., have this kind of sign at the entrance to their dairy barns. This particular type was devised by County Agent Harold Wettyhn. It is made of metal sheeting tucked to heavy board and the sheeting shellaced to shed water.

Spore-Bearing Bacteria

Most of the curdling and digesting bacteria are spore-bearing and can thus withstand unfavorable conditions better than the lactic acid bacteria. For this reason, milk that has been heated sufficiently to kill the lactic acid bacteria will often undergo the undesirable changes attributed to the digesting and curdling organisms. The fact that you notice this trouble from the morning's milk more than from the evening's milk may be due to the fact that the milk is not cooled as rapidly in the daytime as during the evening.

Since this type of organism is spore-bearing, it is difficult to kill them by ordinary scalding of the milk utensils. I would suggest that you place the milk utensils in a large vessel such as a wash boiler and boil them for a half ho

Keep Ahead of the Weeds

START the weed war early by sowing clean seed. If you are
doubt about the purity of the seed, have a sample analyzed
the Pennsylvania Department of Agriculture.

Allow no weeds to mature seeds.

Starve weeds by keeping all leafy parts cut off close to
ground.

Rotate crops. Clean cultivation will assist greatly in keepi
the farm clean of most weeds.

Be persistent in attacking weeds. Don't stop until every
evidence of the weed is gone.

Keep weeds out of fence rows and waste places.

Cooperate with your neighbors in keeping the whole commun
free of weeds.

Get acquainted with strange weeds. One weed can be
start of a real menace.—E. M. Gress, Pennsylvania Department
Agriculture.

The Voice of the People

Will Your Sons Farm?

THIS is a very grave and important question at the present time. In fact, it has become serious in some parts of our great state, especially those sections adjacent to small towns and cities which are employing our farm boys in various industries.

I am the father of two boys and I would like to see them both become good farmers, but I will not drive them to any vocation. Good parents look forward to the time when their sons and daughters take their places and fill them with distinction and honor.

In reading and by actual observation in my own locality, I am convinced that the tendency has been away from the farm, but I believe the young man who has been brought up on the farm and is not afraid of hard work and long hours at certain times will in the course of a few years be envied by his city cousins.

Should Be Independent

Some folks say that farming is such hard manual labor, that monetary returns are too small, that help cannot be obtained and they don't want their sons tied down to the farm. The farmer should be the most independent being under God's sun, because he is manager of his own factory and does not have to go and come at whistle time, but can do his own whistling.

With the modern conveniences in farm homes, and the labor-saving machinery, farming is no longer drudgery but real pleasure.

The construction of highways is increasing yearly and brings the farmer and city man in closer relation.

The farmer has many agencies at his disposal, namely, his own state college and experiment station, his county agent, Pennsylvania Farmer, and much other good reading matter to help him solve his problems.

Therefore, the wise son will be he who takes father's place on the old farm.—C. A. W., York County, Pa.

French Farming and Sales

TO THE EDITOR:—I am the son of a French farmer, and have been rolling stone and turning sod down hill all my life, on a good old hilly farm in America.

My father was a coal miner at the time we bought our farm, and, of course, not having the necessary equipment for farming he made the mistake (just as I did), going to all the sales and purchasing old junk instead of buying new machinery. Repairs had to be made continually, and in the end he had to buy or borrow new tools.

Some of you may think French farmers don't know any better. We sure do. In spite of father's favorite expression, "Old tool, no good, me no go sale, me stop this time, buy new maybe better," the habit has gotten him so that he can't resist attending sales. Usually tools sold at these sales for the second time bring higher prices than the first time. Perhaps this is because they have been tried out successfully by the farmer offering them for sale.—J. L., Cambria County, Pa.

Lamb Feeding Clubs

COUNTY AGENT BERT STRAW reports the organization of four lamb feeding clubs in Potter County as the result of several meetings addressed by W. B. Connell, sheep extension specialist from the Pennsylvania State College.—A. L. B.

Your aims and ours are the same

THE AMERICAN MILLING COMPANY must use the tremendous capacity of its plant to the full, because only by mixing an enormous tonnage can the company pay dividends on its investment under the contract now offered to community groups of farmers.

The aims of AMCO FEED MIXING SERVICE and of the feeder of livestock are the same. Feeders want College Feed Conference Board feeds at the lowest possible cost. Amco Feed Mixing Service desires to price these feeds as low as possible so that more of them may be used.

The common objective, which is a low price on College Feed Conference Board feeds, can only be accomplished through minimum order-getting costs, the continuous operation of a large volume plant, and the development of great purchasing power.

These are aims which can best be accomplished by cooperation between the College Feed Conference Board, which furnishes the formulas; Amco Feed Mixing Service, which makes the feed available to the feeder; and the man who feeds livestock.

Learn How to Concentrate

You'll Find It Hustles Thru the Work of the Day

CONCENTRATION is the most efficient word and the most helpful habit that I know. Now that the spring days are here with their outdoor lure I know that I must work my concentration complex to its utmost to refrain from skipping out the back door to the flower garden every few moments. How the indoor work does drag on a beautiful morning when we obey these impulses! How we long for more time to spend among our beloved flowers or in the vegetable garden. Still the dishes hang on, there are rooms to be tidied and meals to be cooked.

A certain physician writer tells us that keeping in mind a task to be done is equivalent to and just as tiring as actually working at that task constantly. I think he is right. We all have experienced the feeling of relief and restfulness when some long deferred or distasteful bit of work is disposed of.

Our Fashion Book

HAVE you a copy of our 1926 spring and summer Book of Fashions? It contains color plates, 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, some points for the needle (illustrating thirty of the various, simple stitches) and costs only ten cents. If you haven't this book send in your order today, with ten cents in silver or stamps, so that a copy will be sent you at once. Address, Pattern Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

A farm wife is notably one of the busiest of persons and it is truth indeed that her work is never done, but if we can not find the time to do everything let's concentrate on forgetting the things which must remain undone. There are certain tasks that are absolutely necessary. Let us form the habit of doing them one by one trying to put all others from our mind in the meantime. If the work itself isn't pleasant we can cultivate the habit of concentrating on some pleasant thing while we are doing the unpleasant one. This takes some will power just at first, especially if we have already formed the habit of keeping the whole day's work in mind.

Go at Them with Zest

There are certain times when the thought of clearing the attic or tidying closets is abhorrent to us. There are other days when we feel a zest for tasks like these, we can "walk right thru them" and long experience has taught me that it pays well to wait for these days. A certain amount of routine work is necessary in any home but I find that a regular schedule is subject to so many interruptions in the average farm home that it simply tends to make our tasks nerve-racking.

When one begins concentrating on self it is a sure sign that a change is sorely needed. Just a trip to town, a short hike, or a picnic will work wonders. Don't say there isn't time. There never is if we feel that way about it. Take the time—the children are growing up and away from us, whether or not we like to admit it. These are the days that should furnish them and us with the happiest memories. Don't rob them.

Work isn't the only thing upon which to concentrate. When one is tired or out of sorts there are so many beautiful things upon which we may fix our minds. Can anyone feel "blue" for long among a riot of bright-hued flowers? A brisk walk, even on a stormy day, is the finest tonic that I can find. It doesn't matter that I am tired or that I must return in fifteen minutes—the exhilarating effect is the same. Concentrate on a romp with the tiny ones and see if, in the face of their delight, you can still be downcast.

Don't let's concentrate on our petty annoyances, there's so much of real trouble that it scarcely pays to let ourselves become upset by the trivial things. If a friend or neighbor offends you don't dwell upon the offense but concentrate upon his or her good points which are sure to be many. The offense which might have been imaginary or at least unintentional, will soon fade into the background.—Mrs. Ethel A. Lyons, Vermont.

Washing Quilts

NEVER rub or wring quilts. Make a good warm suds, and immerse the quilt in it, having your tub quite low. Use a pounder or one of the little vacuum washers and carefully turn the quilt over and over, until the water is soiled. Then pour out the water, and without removing the quilt add more suds and proceed as before.

Finally when the quilt is clean, use clear warm water and rinse, using the same method as for washing. Rinse until water remains clear. Do not remove the quilt until it is ready for hanging. This is best done after the sun has gone down (except in freezing weather). It takes two persons to hang the dripping quilt on the line, so never attempt it alone, and be sure your helper washes his hands.—Clarice Raymond, N. Y.

Editor's Note:—Let me add another suggestion for the drying process. Hang quilts, blankets, or similar heavy coverings, across two lines placed side by side about two feet apart. This gives air a chance to circulate, and hastens the drying. It also prevents any contact of colors.

Recipe Request

DEAR EDITOR:—Kindly have a recipe printed on Our Page for white fudge. I am a reader of your paper and use all recipes with good results.—A New Jersey Reader.

DIVINITY FUDGE

4 cups granulated sugar
1 cup white syrup
1 cup water
4 egg whites
1 cup broken nut meats
1 teaspoon vanilla

Blend the sugar, syrup, and water. Then boil until the mixture snaps when dropped in cold water. Beat the eggs to a stiff froth and have ready. When the cooked portion is ready, pour it very slowly over the stiffly beaten whites, and keep beating as you pour. Add the nuts and vanilla and continue beating until the mixture begins to hold its shape. Then pour quickly on a buttered pan to cool. It is soon ready to cut as desired.—Home Page Editor.

Mother's Day Entertainment

MOTHER'S DAY is the dearest of all our days for celebration but because it comes on Sunday it is a good plan to celebrate the day before. The children will be home on Saturday, too, and can do the entertaining. If planning for a community celebration for the day here are some ideas that might be worked out successfully.

It would be nice to send out invitations on lavendar cards, decorated with a carnation, bearing the inscription: "A Day of Cheer for Mother Dear," to mothers, grandmothers and great-grandmothers. Now that the weather is getting fine after the cold of winter even great-grandmothers needn't be afraid to venture out for the entertainment. Should the day be fine a short motor ride to some good play or movie would make a good beginning for the day's enjoyment.

And Then the Supper

While supper is being prepared by some of the children the others can entertain the mothers. If possible seat everyone at the same table. The great-grandmothers might act as hostesses and sit at either end of the table, or if there are no great-grandmothers the grandmothers could have the seats of honor.

Of course, there should be place-cards. These, like the invitations, should be decorated with a carnation, the stem going crosswise of the card with the name of the guest written along the stem. Bouquets of pinks in various shades, with smilax trailing to the plates, will be fine for decoration. If you can't get pinks, house plants will do very nicely.

A "Mother's Cake," baked in the largest layer pans it is possible to secure, should occupy the center of the table, and a circular candle holder, made to hold as many candles as the oldest mother present, will add much to the attractiveness of the table.

Home Made Candle Holders

The candle holder can be made out of a couple of boards sawed in half circles, like wheel rims, to fit together, with as many holes bored in them as required, and then painted white. The candle holders can be bought in some stores but the home made ones do as well and the use of them is a great improvement over placing candles on cakes.

It will be best to plan an easily prepared menu of plain old fashioned dishes that can be donated and brought by different families. Salads, cold meats, sauce and fresh fruits, with cake and cookies, will furnish plenty of variety.

The little folks should also help in the entertainment. They can give recitations about mother or sing appropriate songs. If any of the children can play the piano or violin or dance they should contribute their share to the program. Perhaps some of the grandmothers will tell a little story of something that happened long ago that will be interesting to the young folks of today.

When the fathers come to take the mothers home a short play might be given and if the mothers like to dance plan some old fashioned dances — reels, waltzes, square dances, etc.

If the party is given in a private home, it will be possible in most localities to have it where there is a radio. This will furnish enjoyable entertainment.—Addie Folsom, N. H.

Prize Winning Hints

I HAVE three small girls who wear bloomers, and you know that means buttonholes. I do not approve of elastic, because if it is tight enough to stay up, it is too tight for comfort. So I make buttonholes, and I use the idea of making one pair of waist bands do the work of two or even three pairs of bloomers. Or you might say make six buttonholes do the work of twelve or more.

Except on very fine white material, I use a strong unbleached muslin for bands. Cut them an inch wider than usual and after working the side buttonholes, stitch across the outer end on the machine to strengthen them. When the bloomers are gone, the bands will still be good and can be cut off close to the stitching, and be ready to sew onto a new pair.

If front and back of bloomers are made identical, they will wear out uniformly, and the customary patch on the seat will be unnecessary. I want to say, too, while I have this opportunity, that of all the farm papers (we take four others) Pennsylvania Farmer holds most interest for women.—A New Jersey Farmer's Wife.

Systematic Cleaning

I HOPE Our Family avoids the general upheaval folks used to have during housecleaning time. Such a performance is bad for everybody and has no advantage. Bureau drawers and all packing and storage places are the best places to begin. Cupboards and closets should be cleaned while waiting for brighter warmer weather for the spring airings. That is the time, too, to plan for something new. This year it may be but a new cushion or a drapery, but each spring should add some gay touch of newness.

If one takes Monday to cook a few tasty bites, the preparing of meals will not be such a bugbear. A fine kettle of baked beans, a good roast, some mince pies, a crock of ginger cookies, and salad dressing will be big helps.

I find it best for everybody connected with the home to do but one room at a time, and finish that one before starting the next. The peace and quiet of home is little affected by this plan. Never continue cleaning up to Saturday night, but wind up as best you can on Friday. There will be plenty of odd jobs to finish on Saturday in connection with the usual baking, etc. And be sure to go to Ladies' Aid or the Grange, and enjoy the casual visitor when she comes, no matter how busy you have been. The change will benefit you most of all.—Mrs. E. M. Anderson, N. Y.

You need entertainment!

It makes life brighter

MAKE your life mean more from now on! Get a little more of pleasure and entertainment. Winter time does not use up all the year—there's summer too, and harvest!

Nor should work and worry use up all your life—give Paramount Pictures a chance to entertain you and your family. Home seems a better place to go back to after a great photoplay!

And when you go to the movies, *see the very best pictures made!* Enjoy the best in Story. The greatest dramatists of Europe and America are writing for Paramount.

Enjoy the best in Direction. The finest directors are attracted by Paramount's superb equipment. Enjoy the best in Acting Talent. Paramount's audience of many millions attracts the most distinguished stars.

Look down the list. You can see all of these right at your own theatre. Simply pass the list on to your theatre manager. He wants to show what you want to see.

The Greatest Array of Entertainment Talent

and Paramount Pictures they have made for you

Harold Lloyd *stars in* For Heaven's Sake. Directed by Sam Taylor. Made by the Harold Lloyd Corp. and released by Paramount.

Bebe Daniels *stars in* Wild, Wild Susan; Lovers in Quarantine; The Crowded Hour; The Manicure Girl.

Betty Bronson *in* Peter Pan; A Kiss for Cinderella; Not So Long Ago; The Golden Princess.

Douglas MacLean *stars in* That's My Baby; Seven Keys to Baldpate.

Noah Beery *in* The Vanishing American; The Enchanted Hill; Contraband; The Thundering Herd.

Esther Ralston *in* The American Venus; The Lucky Devil; The Best People; Beggar on Horseback.

Thomas Meighan *stars in* The New Klondike; The Man Who Found Himself; Irish Luck; Old Home Week.

Pola Negri *stars in* Crossroads of the World; Flower of Night; A Woman of the World; The Charmer.

Wallace Beery *in* Behind the Front; In the Name of Love; The Pony Express; The Night Club.

Percy Marmont *in* The Street of Forgotten Men; and Lord Jim.

Raymond Hatton *in* Contraband; In the Name of Love; A Son of His Father; Behind the Front.

Florence Vidor *in* The Enchanted Hill; Grounds for Divorce; Marry Me; Sea Horses; Are Parents People?

Gloria Swanson *stars in* The Untamed Lady; Madame Sans-Gene; Coast of Folly; and Stage Struck.

Ernest Torrence *in* Night Life of New York; Dressmaker from Paris; The Side-Show of Life; North of 36.

Greta Nissen *in* The Wanderer; In the Name of Love; The King on Main Street; Lost—A Wife.

Lawrence Gray *in* The Untamed Lady; Palm Beach Girl; Stage Struck; American Venus.

Bessie Love *in* The Song and Dance Man; A Son of His Father; New Brooms; Tongues of Flame.

Tom Moore *in* Adventure; The Song and Dance Man; Trouble With Wives.

Adolphe Menjou *stars in* The Grand Duchess and The Waiter; A Social Celebrity; The King on Main Street.

Lois Wilson *in* The Vanishing American; Let's Get Married; The Thundering Herd; Welcome Home.

Jack Holt *in* Zane Grey's Light of Western Stars; Wild Horse Mesa. Also in The Ancient Highway.

Ford Sterling *in* Trouble With Wives; Stage Struck; Miss Brewster's Millions.

Alice Joyce *in* Mannequin; Dancing Mothers; and The Little French Girl.

W. C. Fields *in* That Royle Girl; It's the Old Army Game.

Richard Dix *stars in* The Lucky Devil; The Ten Commandments; Womanhandled; Too Many Kisses.

Raymond Griffith *stars in* A Regular Fellow; Hands Up; Forty Winks; The Night Club.

Ricardo Cortez *in* The Spaniard; Men and Women; A Kiss in the Dark; In the Name of Love.

George Bancroft *in* Sea Horses; The Pony Express.

Mary Brian *in* Behind the Front; A Regular Fellow; The Little French Girl.

William Collier, Jr. *in* The Wanderer; Eve's Secret.

And after all this is only part of the talent and part of the series of pictures that you can enjoy at the theatre showing Paramount. The theatre manager will gladly tell you his dates on coming Paramount Pictures weeks in advance.

Learn How to Concentrate

You'll Find It Hustles Thru the Work of the Day

CONCENTRATION is the most efficient word and the most helpful habit that I know. Now that the spring days are here with their outdoor lure I know that I must work my concentration complex to its utmost to refrain from skipping out the back door to the flower garden every few moments. How the indoor work does drag on a beautiful morning when we obey these impulses! How we long for more time to spend among our beloved flowers or in the vegetable garden. Still the dishes hang on, there are rooms to be tidied and meals to be cooked.

A certain physician writer tells us that keeping in mind a task to be done is equivalent to and just as tiring as actually working at that task constantly. I think he is right. We all have experienced the feeling of relief and restfulness when some long deferred or distasteful bit of work is disposed of.

Our Fashion Book

HAVE you a copy of our 1926 spring and summer Book of Fashions? It contains color plates, 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, some points for the needle (illustrating thirty of the various, simple stitches) and costs only ten cents. If you haven't this book send in your order today, with ten cents in silver or stamps, so that a copy will be sent you at once. Address, Pattern Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

A farm wife is notably one of the busiest of persons and it is truth indeed that her work is never done, but if we can not find the time to do everything let's concentrate on forgetting the things which must remain undone. There are certain tasks that are absolutely necessary. Let us form the habit of doing them one by one trying to put all others from our mind in the meantime. If the work itself isn't pleasant we can cultivate the habit of concentrating on some pleasant thing while we are doing the unpleasant one. This takes some will power just at first, especially if we have already formed the habit of keeping the whole day's work in mind.

Go at Them with Zest

There are certain times when the thought of cleaning the attic or tidying closets is abhorrent to us. There are other days when we feel a zest for tasks like these, we can "walk right thru them" and long experience has taught me that it pays well to wait for these days. A certain amount of routine work is necessary in any home but I find that a regular schedule is subject to so many interruptions in the average farm home that it simply tends to make our tasks nerve-racking.

When one begins concentrating on self it is a sure sign that a change is sorely needed. Just a trip to town, a short hike, or a picnic will work wonders. Don't say there isn't time. There never is if we feel that way about it. Take the time—the children are growing up and away from us, whether or not we like to admit it. These are the days that should furnish them and us with the happiest memories. Don't rob them.

Work isn't the only thing upon which to concentrate. When one is tired or out of sorts there are so many beautiful things upon which we may fix our minds. Can anyone feel "blue" for long among a riot of bright-hued flowers? A brisk walk, even on a stormy day, is the finest tonic that I can find. It doesn't matter that I am tired or that I must return in fifteen minutes—the exhilarating effect is the same. Concentrate on a romp with the tiny ones and see if, in the face of their delight, you can still be downcast.

Don't let's concentrate on our petty annoyances, there's so much of real trouble that it scarcely pays to let ourselves become upset by the trivial things. If a friend or neighbor offends you don't dwell upon the offense but concentrate upon his or her good points which are sure to be many. The offense which might have been imaginary or at least unintentional, will soon fade into the background.—Mrs. Ethel A. Lyons, Vermont.

Washing Quilts

NEVER rub or wring quilts. Make a good warm suds, and immerse the quilt in it, having your tub quite low. Use a pounder or one of the little vacuum washers and carefully turn the quilt over and over, until the water is soiled. Then pour out the water, and without removing the quilt add more suds and proceed as before.

Finally when the quilt is clean, use clear warm water and rinse, using the same method as for washing. Rinse until water remains clear. Do not remove the quilt until it is ready for hanging. This is best done after the sun has gone down (except in freezing weather). It takes two persons to hang the dripping quilt on the line, so never attempt it alone, and be sure your helper washes his hands.—Clarice Raymond, N. Y.

Editor's Note:—Let me add another suggestion for the drying process. Hang quilts, blankets, or similar heavy coverings, across two lines placed side by side about two feet apart. This gives air a chance to circulate, and hastens the drying. It also prevents any contact of colors.

INTENTIONAL SECOND EXPOSURE

Another reason why over 60,000 Dealers carry Hood Rubber Products

Every Hood Tire you see on the road has *replaced* a tire of another make

No car is equipped at the factory with Hood Tires—yet the white arrow that identifies them is constantly flashing by on all makes of cars in every part of the country.

This is the public's endorsement of Hood quality. Car owners by using Hood Tires have convinced themselves of their worth and have chosen them when replacement was necessary.

In each instance a Hood Dealer makes a customer and gains his permanent good-will.

Mfg. by Hood Rubber Company, Watertown, Mass.

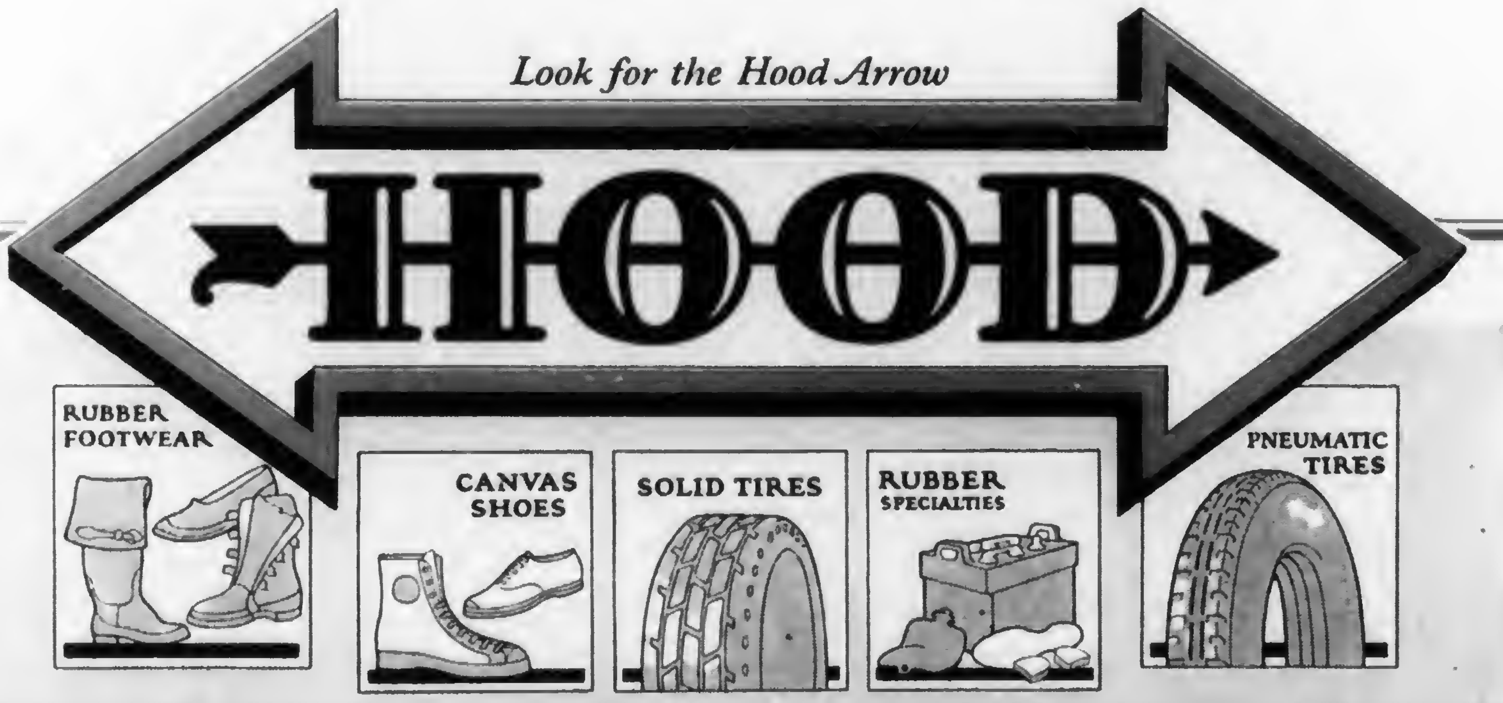
Watertown, Mass.



QUALITY • ALWAYS • MAINTAINED

P. A. speaks your smoke language

YOU and your jimmy-pipe and Prince Albert will hit it off together like the three musketeers. Pals from the first puff! Because, P. A. speaks your language. It knows your tongue and refuses to mistreat it. Not a tongue-bite or a throat-parch in a ton. The Prince Albert process fixes that!

If you've tried to smoke a pipe and given it up for a bad job, give it another whirl now . . . with Prince Albert. (Here is a hot tip on a cool smoke!) Millions of smoke-happy men say to you that you *can* smoke a pipe. It's just a matter of using the right fuel!

Why, you'll even wish your pipe had a Yale *Bowl*, just jammed with this joy tobacco. Like it? Man, they couldn't take that jimmy-pipe away from you with a bench-warrant when you get going with good old P. A. Cool and sweet and fragrant, P. A. knocks pipe-grouches for an indoor loop. It's got everything you ever wished for in a smoke. You'll say so, after that first perfect puff.

Park any doubts just outside the nearest store that hands out the familiar red tins. Tell the man you want a tidy red tin of P. A. (That means jimmy-pipe joy in *any* language!) Then you're all set to clip Coupons of Content . . . from now on!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

CHEVROLET

for Economical Transportation

Always Consider what you get for the price you pay!

Not only, "What will the car cost?"...

But, "What will I get for my money?"...

This is the question of great importance!

It is, for several reasons, especially applicable in buying a car in the low-price field. And it is one of the reasons why Chevrolet has become the world's largest builder of gear-shift automobiles.

In Chevrolet, you get more for little money than in any other car built.

Chevrolet's dry-plate disc-clutch and modern three-speed transmission, with its heavy steel gears, afford gear-shifting of remarkable ease—and the application of abundant power in any of the three forward speeds or reverse.

Chevrolet's modern bodies, all finished in lasting Duco of beautiful colors, afford ample seating room and the full comfort of wide, properly-pitched seats.

All closed bodies are by Fisher, built on the principle employed on all high-priced cars—selected hard wood and steel.

Chevrolet's modern, semi-reversible worm and gear-steering assembly is handled with the utmost ease, enabling the driver to keep to the road under all conditions.

Chevrolet's many other modern, quality-features provide you with a car built sturdily, affording every modern convenience and comfort—quality features that you would look for only on cars of much higher price.

And this year, Chevrolet is breaking all records of the past because it not only possesses vital improvements that bring about a remarkable performance, but in addition, *every passenger car model is offered at a new low price.*

Tens of thousands of new buyers are turning to Chevrolet because they ask themselves this question: "What will I get for my money?" and in seeking the answer, they find, more than ever before, that Chevrolet offers a value that is amazing.

Take a ride in this Improved Chevrolet! You will find it an absolute revelation—not only for smoothness, snap and power—not only for flexibility and riding comfort—but also for the easy-driving, effortless-control, made possible by its modern design.

See your nearest Chevrolet dealer! Ask for a demonstration!

A Cool Kitchen in Summer

An Oil Stove Lightens the Work for Mother

MANY years ago I learned the adage which runs something like this: "Any man who has two loaves should sell one and buy flowers of white narcissus, for one is food for the body, the other food for the soul." So it is with the oil stove. If you have two of anything and no oil stove, by all means sell enough of anything to buy this—woman's greatest summer comfort. It will not only help to feed the whole family, but will feed the soul of whomever does the cooking.

You may have a fine radio in your living room—a new rug on your dining room floor—rockers, strong and comfy for the porch—but Mother cannot really enjoy any of these nice furnishings if she is tired out with kitchen drudgery and parboiled from hours of cooking and canning with the wasted heat of an old time range, be it coal or wood she burns.

If You Haven't Gas or Electricity

We country folk, who live out where electricity has not yet found its way, where gas has not been piped, we are the ones who can greatly enjoy the clean, cool, speedy oil range which modern perfection provides. We may choose between a wick range or one which is wickless, and both styles are giving complete satisfaction among careful cooks everywhere. It pays to buy the best in either style. Both are carefully constructed into ranges which are most attractive. They are built to be easily cleaned, have flame control, are odorless, give quick results, are cool to use, the parts are replaceable, and are easy to operate. They are inexpensive as to fuel and soon pay for themselves in the fuel savings. You can burn one burner steadily for twenty-four hours on one gallon of oil. That sounds good, doesn't it, with coal and wood at present day prices?

There are nice attachments, too, besides the usual baking oven which is such a joy! You can have special broilers and toasters if you wish.

Let us, this spring, look well to our kitchens. This room is the very center of our food supply—the seat of our general health. Is it in readiness for the work of the coming summer? Three meals a day and hundreds and hundreds of jars for the winter's provisions, all to be prepared within the kitchen walls. The Queen of these enterprises deserves the very best that can be provided for such important work. Let's see to it there is a good oil stove in the kitchen to do its bit. It will allow sister, wife, or mother to eat in cool comfort after preparing a dinner for threshers or silo fillers. It will give that busy cook extra hours out of the kitchen,—hours which are bound to mean better homes and happier families.—Home Page Editor.

Shining Windows

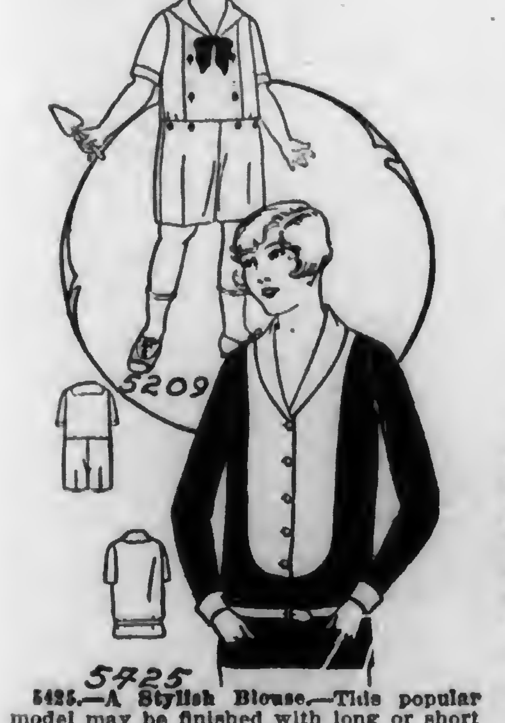
WASHING the windows in this house constituted one of my greatest problems until I learned that gasoline or alcohol would work wonders with glass that even after repeated washings and rinsings remained opaque. Simply add either to the washing water, a teaspoonful to each quart of water used.

If the glass is not dirty and you want to give a shine, then moisten a clean cloth with gasoline and apply to the surface. Polish at once with crushed newspaper or tissue; never with a cloth for it won't produe the sparkle.—Mrs. E. M. A.

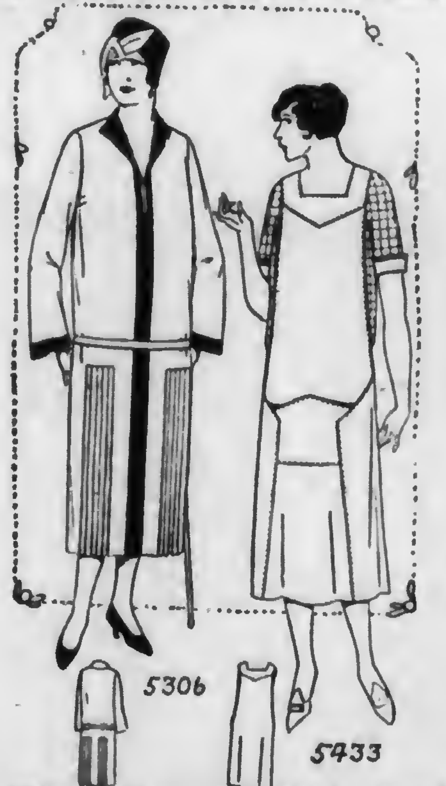
Standbys for Warm Weather

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5209.—For a Small Boy.—Linen, kindergarten cloth, chambray, jersey, flannel or pongee may be used for this model. The closing is at the left side under the tuck. Four sizes: 2, 4, 6 and 8 years. A 4-year size will require 2 yards of 36-inch material. Pattern, 10 cents.



5425.—A Stylish Blouse.—This popular model may be finished with long or short sleeves. The plastron or bosom may be stitched over or under the front portions. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size if made of one material will require 2¾ yards of 40-inch material. If made as illustrated it will require 2 yards of one material 40 inches wide with ¾ yard of another material 40 inches wide to face the plastron, collar and cuffs. If made with short sleeves 1¾ yard of one material will be required. Pattern, 10 cents.



5306.—An Attractive Model.—Broadcloth and satin or crepe and satin could be combined in this style. Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. To make as illustrated for a 42-inch size will require 5 yards of 40-inch material with ¾ yard contrasting material cut crosswise for collar, panel, revers and sleeve facings. The width of the skirt at the lower edge with plaits extended is 3¼ yards. Pattern, 10 cents.

5433.—Practical Apron.—A good feature of this style is the ample pocket on the front. The side edges of the back are brought over the front and stitched, or fastened to position with snap fasteners or buttons. The garment is in slip-on style. Four sizes: small, medium, large and extra large. A medium size will require 3⅛ yards of 36-inch material. Pattern, 10 cents.

CHEVROLET

for Economical Transportation

Always Consider what you get for the price you pay!

Not only, "What will the car cost?"...

But, "What will I get for my money?"...

This is the question of great importance!

It is, for several reasons, especially applicable in buying a car in the low-price field. And it is one of the reasons why Chevrolet has become the world's largest builder of gear-shift automobiles.

In Chevrolet, you get more for little money than in any other car built.

Chevrolet's dry-plate disc-clutch and modern three-speed transmission, with its heavy steel gears, afford gear-shifting of remarkable ease—and the application of abundant power in any of the three forward speeds or reverse.

Chevrolet's modern bodies, all finished in lasting Duco of beautiful colors, afford ample seating room and the full comfort of wide, properly-pitched seats.

All closed bodies are by Fisher, built on the principle employed on all high-priced cars—selected hard wood and steel.

Chevrolet's modern, semi-reversible worm and gear-steering assembly is handled with the utmost ease, enabling the driver to keep to the road under all conditions.

Chevrolet's many other modern, quality-features provide you with a car built sturdily, affording every modern convenience and comfort—quality features that you would look for only on cars of much higher price.

And this year, Chevrolet is breaking all records of the past because it not only possesses vital improvements that bring about a remarkable performance, but in addition, *every passenger car model is offered at a new low price.*

Tens of thousands of new buyers are turning to Chevrolet because they ask themselves this question: "What will I get for my money?" and in seeking the answer, they find, more than ever before, that Chevrolet offers a value that is amazing.

Take a ride in this Improved Chevrolet! You will find it an absolute revelation—not only for smoothness, snap and power—not only for flexibility and riding comfort—but also for the easy-driving, effortless-control, made possible by its modern design.

See your nearest Chevrolet dealer! Ask for a demonstration!

QUALITY AT LOW COST

A Cool Kitchen in Summer

An Oil Stove Lightens the Work for Mother

MANY years ago I learned the adage which runs something like this: "Any man who has two loaves should sell one and buy flowers of white narcissus, for one is food for the body, the other food for the soul." So it is with the oil stove. If you have two of anything and no oil stove, by all means sell enough of anything to buy this—woman's greatest summer comfort. It will not only help to feed the whole family, but will feed the soul of whomever does the cooking.

You may have a fine radio in your living room—a new rug on your dining room floor—rockers, strong and comfy for the porch—but Mother cannot really enjoy any of these nice furnishings if she is tired out with kitchen drudgery and parboiled from hours of cooking and canning with the wasted heat of an old time range, be it coal or wood she burns.

If You Haven't Gas or Electricity

We country folk, who live out where electricity has not yet found its way, where gas has not been piped, we are the ones who can greatly enjoy the clean, cool, speedy oil range which modern perfection provides. We may choose between a wick range or one which is wickless, and both styles are giving complete satisfaction among careful cooks everywhere. It pays to buy the best in either style. Both are carefully constructed into ranges which are most attractive. They are built to be easily cleaned, have flame control, are odorless, give quick results, are cool to use, the parts are replaceable, and are easy to operate. They are inexpensive as to fuel and soon pay for themselves in the fuel savings. You can burn one burner steadily for twenty-four hours on one gallon of oil. That sounds good, doesn't it, with coal and wood at present day prices?

There are nice attachments, too, besides the usual baking oven which is such a joy! You can have special broilers and toasters if you wish.

Let us, this spring, look well to our kitchens. This room is the very center of our food supply—the seat of our general health. Is it in readiness for the work of the coming summer? Three meals a day and hundreds and hundreds of jars for the winter's provisions, all to be prepared within the kitchen walls. The Queen of these enterprises deserves the very best that can be provided for such important work. Let's see to it there is a good oil stove in the kitchen to do its bit. It will allow sister, wife, or mother to eat in cool comfort after preparing a dinner for threshers or silo fillers. It will give that busy cook extra hours out of the kitchen,—hours which are bound to mean better homes and happier families.—Home Page Editor.

INTENTIONAL SECOND EXPOSURE

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—Today all over the United States men, women and children are observing May Day as Child Health Day. In big cities and in country towns, in homes and schools and churches, fathers and mothers, teachers, ministers and doctors are doing all they can to give you and other American children a chance to enjoy health. If you don't think that's important you've never been very sick!

We who live in the country ought to be the healthiest, happiest people alive, but are we? Doctors say we aren't. With fresh air, and woods and flowers and streams, with birds and animals and outdoor work to do, we should be able to show the shut-in city children the way to health. But we don't—why?

First Child Health Day

For years May Day has been celebrated with outdoor festivals, pageants and May pole dances, a welcome to the month of flowers, but it wasn't until three years ago that Herbert Hoover, president of the American Child Health Association, thought of making that day Child Health Day, too, so that now when you take part in a May Day pageant or games or a May pole dance you're having two celebrations all in one.

I don't suppose that there is one of you who wouldn't like to be able to get A's and B's in all his or her lessons. The quickest and surest way to get them is to be healthy and strong. Good health will help you do good work now and after you graduate, and that means happiness for healthy bodies make healthy minds and happiness.

There are so many little things we do that give us or rob us of health. Do you get plenty of sleep in a room full of fresh air? Do you have your eyes and teeth examined regularly? Do you eat those things full of little vitamins that will make your bodies and minds grow? Do you get lots of exercise? But there, this isn't an examination and I know that girls and boys who go sledding in winter, fishing and camping in summer, who make gardens and work in the house and fields, must get lots of exercise.

What about those other three questions, tho? If you can't answer them today with a great big "Yes" talk them over with father and mother—they want their boys and girls to be able to do good work at home and school and they'll help you get the right answers by next Health Day. Tell them to listen in on the radio today for talks broadcast from WLIT at 2 P. M.; WFI, 3 P. M.; WIP, 4 P. M.; WOO, 7.30 P. M., and WCAE, 8 P. M. They'll want to hear what doctors can tell them so they can help you be healthy and strong the whole year thru.

This year every state in the Union except one will celebrate Child Health Day in some way or other. Are you taking part?

If you're a 4-H Club member don't forget the fourth H—Health. If you're a friend or member of this Forum never forget that health means happiness and that you're going to be the healthiest, happiest people in this big United States. Today is May Day—make it Health Day, too.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth:—I am sending you a picture of some of my girl friends and I, from left to right they are: Marie Berger, myself, Ruth Fisher and Anna Doerstler, all from Rohrerstown.

I like school very much and I am going to go thru college.

I am glad when summer comes and the flowers begin to grow and we can plant the vegetables. April and May bring out the buds. I am so glad for I like the spring.

I wish I could see you, Cousin Ruth, to talk to. It seems that we could be the best of friends right away. You look so much like my teacher.—Martha Richter (X), Lancaster County, Pa.

MY GIRL FRIENDS AND I
Martha Richter (X), Lancaster Co., Pa.

Dear Cousin Ruth and Forum Friends:—Things have changed so much since I wrote you last tho I still live on the same place. All my cats have died but I have new ones. I also have a different horse. Her name is Nancy and she is a fine saddle horse. I love to ride her in summer. She is twenty-eight years old.

Hoodie, my pet chicken with the cap on her head, has died and also Rover, my dog. He was a very good dog and the whole family was very sorry when he died. Now we have a Brindle Bulldog and I call him Rover, too, but he is not half as good as old Rover was.

We have about 500 chickens. We have two new chicken coops. I take care of them sometimes but most always my father does it.

I find our page has improved a lot in the last few years. We can be proud of our work, and to think we owe it to Cousin Ruth who brings us together.—Mary Wieland, sixteen, Sullivan County, N. Y.

It's fine to hear from you again.

Dear Cousin Ruth and Forum Friends:—I like spring best of all because the flowers will soon be out. Cousin Ruth, have you a radio? We have. I listen to Miss Hazle Knox and I wrote to her and she sent me a button. It was called the WBAL Sandman Circle. We have some baby chicks which I like to feed. Do you like little chicks? I am sending a recipe.

FEATHER CAKE

2 cups of sugar
3 eggs
½ cup butter or lard
1 cup milk
2 teaspoons baking powder
Flour to make stiff

I help mother because my sister is working.—Helen Brandenburg (X), nine, Baltimore County, Md.

Dear Cousin Ruth:—We have seventeen little pigs and three horses and I like to plow with them. Spring is here now and we will soon start to plow. I saw a bluebird the other evening. A flock of geese flew over our barn last month.

I go to school every day. I study very hard. I had traps setting last winter. I caught three skunks. I looked at them every morning.—Leon McQuade (X), Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—I am writing to tell you what I will have to do this summer as mother will have to work on the farm. I have six rooms and a sister five years old and a baby sister a year old to take care of. We have an eight-acre farm with all kinds of fruits.

I have two pet dogs and a cat. I have a number of dolls, teddy bears and all kinds of things to amuse my two sisters while I do the work.

Mother does the hardest work and I do the light housework.—Irene Elizabeth Madaline Kueppers, thirteen (X), Butler County, Pa.

You'll be a busy housekeeper this summer. Try to get plenty of runs in the out-of-doors so you'll stay strong and able to help mother.

READY FOR A SWIM
Alma M. Mingin (X),
Burlington County, N. J.

Dear Cousin Ruth:—I live on a farm of 160 acres. About sixty acres of it is land on which the cattle feed and the rest we farm. I like to ride the horse after the cows. My father is dead and my two brothers and a hired man do the farming.

I go to Thorndale school.

We have a police dog and a Collie dog which I like very much. We have a police dog for sale. The Collie dogs are a great help to get the cows, they bite the cows' heels and make them run. We have about thirty cows and about that many heifers.

I like to ride horseback. I go out riding on Sunday when it is warm.—Morris P. Seeds, eleven (X), Chester County, Pa.

Dear Cousin Ruth:—They are drilling a well up our way and they even work on Sundays. I suppose to get it done.

There is a creek that runs in back of our house and when it rains the creek rises very high.

In our orchard there are apple, pear, cherry and plum trees. One year we had two pears on the pear tree and they were terribly hard. Every year the birds eat the cherries.

On the hill in back of my house all kinds of flowers bloom. Cousin Ruth, do you like to pick flowers? I do.—Lillian Waldd, twelve (X), McKean County, Pa.

Dear Cousin Ruth:—I have good times playing with my brother and sister. We play ball in summer. Lawrence and I set traps, too. We are going to fish a lot this year. We have a trout stream near our place.

I have a pet dog. It is a great big dog. He is eight years old. We are going to get another dog. We have three horses and I like them. I have three Bantam hens. They are so tame that when I come to feed them they fly on my shoulders.—Richard Hoag, (X), Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—Here I am again after so long a time. For my pet I have a Collie dog and he likes to play. When you come around him he will jump upon your arm and want to shake hands with you. He is a big white Collie. I like him because he is very fond of me. His name is Jack. I have had him for about a year. He will drive cows and horses. Yes, he will hunt, too. He likes to hunt squirrels. He is a great playfellow.—Daniel Grimes, Jr., Bedford County, Pa.

Riddle Answers

1. Because he wears his fur coat and pants.
2. Because you lick him and stand him in the corner.
3. A wagon.
4. Because it is a fellow feeling for another.
5. Because the cats eat it.
6. The road.
7. Because he shrinks from washing.

—Margaret R. Bushey (X), Adams County, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—This is an example in addition: all that you have to do is to put the "plus" signs in the correct places in the string of "ones," and you will find that sum really is "twenty-five." Shall I give you a hint? Maybe it will help get the answer if you call a pair of the "ones" "eleven." How's that? I know you'd not want me to give the whole secret away. When you have worked out just where the "plus" signs have to go to make the "ones" add up to equal "twenty-five," send the answer on A POSTCARD so it reaches me by May 8th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks have been very careless and have been making simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the April 3 issue of Pennsylvania Farmer is: ADVICE.

The puzzle prize winners are: Vernon L. Bonner, age 12, Finksburg, Md.; Frank Ferguson, age 7, Pine City, N. Y.; Leah Freed, age 11, Orwigsburg, Pa.; Franklin Hunsberger, age 9, Harleyville, Pa.; Anna E. Johnston, age 11, Webster Mills, Pa.; Fannie Shank, age 8, Waynesboro, Pa.; Amelia Pirin, age 11, Slovan, Pa.; Cecelia Short, age 12, Cokeville, Pa.; Louise Sullivan, age 8, Denton, Md.; Hannah Wallace, age 8, Brandywine Summit, Pa.

Honor Prize winner: Marian I. Kern, age 7, Newside, Pa.

Ice-Bound Hearts

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane and get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed reported he'd seen a white man and woman. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

Just when Pelletier believed he was dying Jim Blake appeared with a story of an Eskimo squaw left at an igloo up the coast. Pelletier discovers the story to be false. Blake attempts to kill the sick man, who is saved by Kazan—the one-eyed sledge dog. Then Pelletier starts a search for the deserted white woman which ended abruptly when he found a dead Eskimo woman and a living baby—Little Mystery he called her—in a nearby igloo. Eight days later MacVeigh returned to the cabin.

(Continued from last week)

LATE one afternoon Billy went out and stood on the cliff, watching the thunderous movement of arctic ice out in the Roes Welcome. Standing motionless fifty paces from the little storm-beaten cabin that represented law at this loneliest outpost on the American continent, he looked like a carven thing of dun-gray rock, with a dun-gray world over his head, and on all sides of him, broken only in its terrific monotony of deathlike sameness by the darker gloom of the sky and the whiter and ghostlier gloom that hung over the ice-fields. The wind was still bitter, and his vision was shut in by a near horizon which Billy had often thought of as the rim of hell.

On this afternoon his heart was as leaden as the day. Under his feet the frozen earth shivered with the rumbling reverberations of the crashing and breaking mountains of ice. His ears were filled with a dull and steady roar, like the echoes of distant thunder, broken now and then—when an ice-mountain split asunder—with a report like that of a thirteen-inch gun. There were curious wailings, strange screeching sounds, and heart-breaking meanings in the air. Two days before MacVeigh had heard the roar of the ice ten miles inland, where he had gone for caribou.

But he scarcely heard that roar now. He was looking toward the warring fields of ice, but he did not see them. It was not the dead gloom and the gray monotony that weighted his heart, but the sounds that he heard now and then in the cabin—the laughing of Little Mystery and of Pelletier. A few days more and he would lose them. And after that—what would be left for him? A cry broke from his lips, and he gripped his hands in despair. He would be alone. There was no one waiting for him down in that world to which Pelletier was going; no girl to meet him; no father, no mother—nothing.

HE LAUGHED in his pain as he faced the wind from the north. The sting of that wind was like the mocking ghost of his own past life. For all his life he had known only the stings of pain and of loneliness. And then, suddenly, there came Pelletier's words to him again—"Mebby some day you'll have a kid." A flood of warmth swept thru his veins, and in the moment of forgetfulness and hope which came with it, he turned his eyes into the south and west, and saw again the sweet face and upturned lips of Isobel Deane.

He pulled himself together with a low laugh, and faced the breaking seas of ice, and the north. The gloom of night had drawn the horizon nearer. The rumble and thunder of crumbling floes came from out of a purple chaos that was growing blue-black in the distance. For several minutes he stood listening, and looking into nothingness. The breaking of the ice, the moaning discontent in the air, and the growling monotone of the giant currents had driven other men mad; but they held a fascination for him.

He knew what was happening, and he could almost measure the strength of the unseen hands of nature. No sound was new or strange to him. But now—as he stood there—there rose above all the other tumult a sound that he had not heard before. His body became suddenly tense and alert as he faced squarely to the north. For a full minute he listened, and then turned and ran to the cabin.

Pelletier had lighted a lamp, and in its glow Billy's face shone white with excitement.

"Good God, Pelly, come here!" he cried from the door.

As Pelletier ran out he gripped him by the shoulders.

"Listen!" he commanded. "Listen to that!"

"Wolves!" said Pelletier.

The wind was rising, and sent a whistling blast thru the open door of the cabin. It awakened Little Mystery, who sat up with frightened cries.

"No, it's not wolves," cried MacVeigh, and it did not sound like MacVeigh's voice that spoke. "I never heard wolves like that. Listen!"

He clutched Pelletier's arm as on a fresh burst of the wind there came the strange and terrible sound from out of the night. It was rapidly drawing nearer—a wailing burst of savage voice, as if a great wolf-pack had struck the fresh and blood-stained trail of game. But with this there was the other and more fearful sound; a shrieking and yelping as if half human creatures were being torn by the fangs of beasts. As Pelletier and MacVeigh stood waiting for something to appear out of the gray-and-black mystery of the night they heard a sound that was like the slow tolling of a thing that was half bell and half drum.

"It's not wolves," shouted Billy. "Whatever it is there's men with it! Hurry, Pelly—into the cabin with our dogs and sledge. Those are dogs we hear—dogs who are howling because they smell us—and there are hundreds of 'em! Where there's dogs there's men—but who can they be?"

He dragged the sledge into the cabin while Pelletier unlashed the huskies from the lean-to. When he came in with the dogs, Pelletier locked and bolted the door.

Billy slipped a clipful of cartridges into his big-game rifle. His carbine was already on the table, and as Pelletier stood staring at him in indecision, he pulled out two automatics from under his bunk and gave one of them to his companion. His face was white and set.

"Better get ready, Pelly," he said quietly. "I've been in this country a long time, and I tell you they're dogs and men. Did you hear the drum? It's made of seal belly, and there's a bell on each side of it. They're Eskimos, and there isn't an Eskimo village within two hundred miles of us this winter. They're Eskimos—and they're not on a hunt—unless it's for us!"

IN AN instant Pelletier was buckling on his revolver and cartridge-belt. He grinned as he looked at the wicked little blued-steel automatic.

"I hope you ain't mistaken, Billy," he said, "for it'll be the first excitement we've had in a year."

None of his enthusiasm revealed itself in MacVeigh's face.

"The Eskimo never fights until he's gone mad, Pelly," he said, "and you know what madmen are. I can't guess what they've got to fight over, unless they want our grub. But if they do—"

He moved toward the door, rifle in hand. "Be ready to cover me, Pelly. I'm going out. Don't fire until you hear me shoot."

He opened the door and stepped out. The howling had ceased now, but there came in its place strange barking voices and a cracking which Billy knew was made by the long Eskimo whips. He advanced to meet many dim forms which he saw breaking out of the wall of gloom, raising his voice in a loud halloo. From the doorway Pelletier saw him suddenly lost in a mass of dogs and men, and half flung his carbine to his shoulder. But there was no shooting from MacVeigh.

A score of sledges had drawn up about him, and the whips of dozens of little black men cracked viciously as their dogs sank upon their bellies in the snow. Both men and dogs were tired, and Billy saw that they had been running long and hard. Still as quick as animals, the little men gathered about him, their white-and-black eyes staring at him out of round, thick, dumb-looking faces.

He noted that they were half a hundred strong, and that all were armed—many with their javelin-like narwhal-harpoons, some with spears, and others with rifles. From the circle of strangely dressed and hideously visaged beings that had gathered about him, one advanced and began talking to him in a language that was like the rapid clack of knuckle-bones.

"Kogmollocks!" Billy groaned, and he lifted both hands to show that he did not understand. Then he raised his voice: "Nuna-talmute," he cried. "Nuna-talmute — Nuna-talmute! Ain't there one of that lingo among you?"

He spoke directly to the chief man, who stared at him in silence for a moment, and then pointed both short arms toward the lighted cabin.

"Come on!" said Billy. He caught the little Eskimo by one of his thick arms and led him boldly thru the breach that was made for them in the circle. The chief man's voice broke out in a few words of command like a dozen quick, sharp yelps of a dog, and six other Eskimos dropped in behind them.

"Kogmollocks—the blackest-hearted little devils alive when it comes to trading wives and fighting," said MacVeigh to Pelletier as he came up at the head of the seven little black men. "Watch the door, Pelly. They're coming in."

He stepped into the cabin, and the Eskimos followed. From Pelletier's bunk, Little Mystery looked at the strange visitors with eyes which suddenly widened with surprise and joy, and in another moment she had given the strangest cry that Pelletier or Billy had ever heard her utter. Scarcely had that cry fallen from her lips than one of the Eskimos sprang toward her. His black hands were already upon her, dragging the child from the bunk, when with a warning yell of rage Pelletier leaped from the door and sent him crashing back among his companions. In another instant both men were facing the seven Eskimos with leveled automatics.

"If you fire, don't shoot to kill!" commanded MacVeigh.

THE chief man was pointing to Little Mystery, his weird voice rising until it was almost a scream. Suddenly he doubled himself back and raised his javelin. Simultanously two streams of fire leaped from the automatics. The javelin dropped to the floor, and with a shrill cry, which was half pain and half command, the leader staggered back to the door, a stream of blood running from his wounded hand. The others sprang out ahead of him, and Pelletier closed and bolted the door. When he turned, MacVeigh was closing and slipping the bolts to the heavy barricades of the two windows. From Pelletier's bunk Little Mystery looked at them and laughed.

"So it's you?" said Billy, coming to her and breathing hard. "It's you they want, eh? Now—I wonder why?"

Pelletier's face was flushed with excitement. He was reloading his automatic. There was almost a triumph in his eyes as he met MacVeigh's questioning gaze.

They stood and listened; heard only the rumbling monotone of the drifting ice—not the breath of a sound from the scores of men and dogs.

"We've given them a lesson," said Pelletier at last, smiling with the confidence of a man who was half a tenderfoot among the little brown men.

Billy pointed to the door.

"That door is about the only place vulnerable to their bullets," he said, as tho he had not heard Pelletier. "Keep out of its range. I don't believe what guns they've got are heavy enough to penetrate the logs. Your bunk is out of line, and safe."

He went to Little Mystery, and his stern face relaxed into a smile as she put up her arms to greet him.

"So it's you, is it?" he asked again, taking her warm little face and soft curls between his two hands. "They want you, an' they want you bad. Well, they can have grub, an' they can have me, but—" he looked up to meet Pelletier's eyes—"I'm d—d if they can have you," he finished.

SUDDENLY the night was broken by another sound, the sharp, explosive crack of rifles. The could hear the beat of bullets against the logs of the cabin. One crashed thru the door, tearing away a splinter as wide as a man's arm, and as MacVeigh nodded to the path of the bullet, he laughed. Pelletier had heard that laugh before. He knew what it meant. He knew what the death whiteness of MacVeigh's face meant. It was not fear, but something more terrible than fear. His own face was flushed. That is the difference in men.

MacVeigh suddenly darted across the danger zone to the opposite half of the cabin.

"If that's your game, here goes!" he cried. "Now, d—n y', you're so anxious to fight—get at it 'n' fight!"

He spoke the last words to Pelletier. Billy always swore when he went into action.

On his own side of the cabin, Pelletier began tugging at a small, thin block, laid between two of the logs. The shooting outside had ceased when the two men opened up the loopholes that commanded a range seaward. Almost immediately it began again, the dull, red flashes showing the location of the Eskimos, who had drawn back to the ridge that sloped down to the bay. As the last of five shots left his rifle, Billy pulled in his gun and faced across to Pelletier, who was already reloading.

"Pelly, I don't want to croak," he said, "but this is the last of law at Fullerton Point—for you and me. Look at that!"

He raised the muzzle of his rifle to one of the logs over head. Pelletier could see the fresh splinters sticking out.

"They've got some heavy calibers," continued Billy, "and they've hidden behind the slope, where they're safe from us for a thousand years. As soon as it grows light enough to see, they'll fill this shack as full of holes as an old cheese."

As if to verify his words, a single shot rang out, and a bullet plowed thru a log so close to Pelletier that the splinters flew into his face.

"I know these little devils, Pelly," went on MacVeigh. "If they were Nuna-talmutes you could scare 'em with a sky-rocket. But they're Kogmollocks. They've murdered the crews of half a dozen whalers, and I shouldn't wonder if they'd get the kid in some such way. They wouldn't let us off now—even if we gave her up. It wouldn't do. They know better than to let the law get any evidenced against them. If we're killed, and the cabin burned, who's going to say what happened to us? There's just two things for us to do—"

Another fusillade of shots came from the snow-ridge, and a third bullet crashed into the cabin.

"Just two things," Billy went on, as he completely shaded the dimly burning lamp. "We can stay here 'n' [illegible]— or run."

"Run!"

This was an unknown word in the service, and in Pelletier's voice there were both amazement and contempt.

"Yes, run!" said Billy quietly. "Run—for the kid's sake."

It was almost dark in the cabin, and Pelletier came close to his companion.

"You mean—"

"That it's the only way to save the kid. We might give her up, and then fight it out—but that means she'd go back to the Eskimos, 'n' mebby never be found again. The men and dogs out there are bushed. We are fresh. If we can get away from the cabin, we can beat 'em out."

"We'll run then," said Pelletier.

He went to Little Mystery, who sat stunned into silence, and hugged her up in his arms, his back turned to the possible bullet that might come thru the wall.

"We're going to run, little sweetheart," he mumbled half laughingly in her curls.

(To be continued next week)

News and Notes

SOME farmers in the West spray or dust their alfalfa fields to protect them from the destructive alfalfa weevil. This pest was discovered in Utah about twenty years ago; now it infests seven states. It is considered such a menace to the alfalfa crop that the luggage of motorists leaving the quarantined states often is examined to make certain that the weevil is not being carried into uninfested states.

* * *

On one farm in the Middle West it cost $3.07 to produce 100 pounds of marketable pork. On another farm nearby it cost $13.55 to produce the same amount of pork. Conditions were the same on the two farms. The only difference was in the methods used in feeding and caring for the hogs.

* * *

A new variety of hardy wheat has been developed in Canada which, it is claimed, will extend the wheat growing belt of that country from seventy-five to 100 miles farther north. In other words, about 40,000,000 acres of land are opened up to those who wish to grow wheat as close to the Arctic Circle as possible.

The first day of May is to be National Egg Day. The National Poultry Council has set aside this day on which to call attention to poultry raising, which is exceeded in importance by only four other branches of agriculture. The American hen produces more than a billion dollars worth of food products in a year, or about ten dollars worth for every person in the United States.

* * *

Last year Adams County, Pennsylvania, had the largest boys' and girls' baby beef club in the United States. This year the club is to be still larger. About sixty-five members are signed up and waiting for their calves, many of the new members being younger brothers and sisters of those who belonged to the club last year.

* * *

The German Hill potato spray ring of Forest County, Pennsylvania, recently voted to assess each member one dollar per year per acre sprayed, the money to be set aside in a special fund for the purchase of a new sprayer when the present machine needs to be replaced. That's foresight.

ATWATER KENT
IGNITION
for Fords

Don't give up your Ford

The Atwater Kent Type LA Ignition System for Fords is the best tonic for cars, old or *new*.

It makes motors run smoother, starting easier, and gives more power, and it is everlastingly dependable.

In general design, material and equipment it is the same as Atwater Kent Ignition Systems furnished as a standard equipment on many of America's foremost cars, and as carefully made as an Atwater Kent Radio Set.

It will last as long as your Ford, can be installed in less than an hour, and sells for only $10.80.

Stopped Her Chicks Dying of Diarrhea

Didn't lose another one after trying this in the drinking water

Readers will find good news in this letter from Mrs. Mary Bender, Rockford, Ohio. She says:

"Out of 30 chicks, I had lost all but 10. Then I tried Avicol in the drinking water, and didn't lose another one. I have never used anything else so good for diarrhea. Am raising 125 chicks now, all as lively and healthy as can be."

The way Avicol makes sick chicks lively and healthy, in just a few hours, is really amazing. Every reader is invited to test it and see how easily white diarrhea is prevented and stopped. Send 50c for a liberal package to Burrell-Dugger Co., 674 Nelson St., Indianapolis, Ind. It costs nothing to try, as Avicol is positively guaranteed to do the work or money refunded. Folks who have tested Avicol under this offer, have found they can now raise nearly every chick in every hatch.

Enlarged Liver

Upon opening a sick chicken after killing we found the liver enlarged until it almost filled the inside of the fowl. The gizzard, intestines, etc., were crowded to one side. The color was a purplish yellow and the liver seemed like fish eggs. This chicken had been sick a few days, but when we killed it it seemed better and had started to eat. Would this have been contagious or would the chicken have recovered? We have about seventy-five lovely White Rocks and don't want any disease.—Mrs. W. E. R., Gloucester County, N. J.

When hens have inflammation of the liver, it is greatly enlarged. It is said to be caused by poisonous substances being absorbed from the intestines. Fat may accumulate in the liver and interfere with action. Congestion of the liver and fatty infiltration of the liver are troubles that sometimes occur.

Liver troubles in hens are difficult to treat because they are seldom discovered until after the death of the bird. They may be caused by heavy feeding and lack of exercise. Such losses may occasionally occur in the best managed flocks but the losses can be reduced to a minimum by making the hens exercise in deep litter for their scratch grain. Feed green stuff to balance the more concentrated materials in the ration.

Cull out the old hens that show a tendency to become heavy with fat in spite of the best of management. Band the hens so that good looking birds will not be retained until they are four and five years old and in more danger of liver trouble than healthy vigorous pullets. Liver trouble is not contagious unless tuberculosis is present.—R. G. Kirby.

Eggs for Hatching

I have some geese. They are laying and the eggs are fertile. Some one told me that the eggs are not good for hatching until the geese get grass to eat. Please tell me if they are good. —H. S., Bucks County, Pa.

The goose eggs laid before the birds have green pasture will be all right for hatching. However, the geese need some roughage such as alfalfa, clover, silage or vegetables. Too much corn makes breeding geese too fat and will reduce the fertility of the eggs. A mash composed of equal parts ground corn and ground oats makes a good grain feed for breeding geese. Too much silage should not be used if it contains much corn.

Gather the goose eggs often in cold weather to keep them from being chilled. Store them in a cool room where the temperature will not go above fifty or fifty-five degrees. This helps to cut down the evaporation from the eggs. Some goose breeders store the eggs for hatching in bran to reduce evaporation. It pays to set the eggs as soon as possible as the fresher the eggs the greater the chances for a good hatch of vigorous goslings.—R. G. Kirby

Watch Weight of Hens

OCCASIONALLY a hen which has been in good health will be found dead under the roosts. The head of the bird will still seem red and the body will be plump with no indications of disease. Death may be caused by apoplexy or internal ruptures due to fright or the strain of laying.

Such losses most often occur among old hens that have become too fat. They can be reduced to a minimum by careful feeding and culling. Watch the weight of the hens and keep them from becoming baggy with fat. Scatter the grain in straw litter so the birds will scratch for a living. Provide succulent green feed. It acts as a tonic and helps prevent digestive disorders. Do not allow dogs to chase the hens on the range.

When strangers visit poultry houses the birds are often badly frightened. If they are Leghorns it may send the flock to the ceiling and against the side walls and cause more or less shock and bruising. Everything that tends to frighten hens or reduce their vitality helps increase the number found dead. The normal death in flocks seems to vary from five to fifteen per cent. The lower the rate the greater the profits in the poultry business.—R. G. Kirby.

The Young Ducklings

AN EASILY mixed ration for starting ducklings consists of equal amounts of bread crumbs and rolled oats. About three per cent sand should be sprinkled over the mixture. This can be given three or five times each day depending on the size of the flock, condition of the range and time of the caretaker. Be sure to feed only the amount the ducklings will clean up in a short time. Feed left to mold and spoil causes many losses among young ducklings.

When the ducklings are four days old change the ration to a mixture of equal parts bread crumbs, rolled oats, corn meal and bran. When they are one week old use a mash made of three parts bran, one part low-grade wheat flour and one part corn meal. About ten per cent green feed, five per cent meat scrap and three per cent of sand should be added to the mash.

They Need Shade

Many ducklings die from sunstroke due to exposure to the hot sun in small bare yards. A shady pasture or an orchard in sod makes a good range for ducklings. They need a lot of green feed and penning them up in narrow quarters soon reduces the amount of fresh clean plants they can obtain and also contaminates the soil. Ducks need to keep their eyes and nostrils clean so the water should be given in dishes deep enough for them to fully immerse their heads.

Damp muddy yards sometimes make ducklings lame. The fits or dizzy spells which sometimes kill ducklings are due to digestive troubles. Lameness is often caused by a lack of mineral and animal matter in the ration. Some breeders mix all rations for ducklings with milk and it seems helpful in promoting growth.—R. G. Kirby.

Penn State at the Sesqui

PLANS are being made under the direction of E. K. Hibschman, assistant to the president, for a Pennsylvania State College exhibit at the Sesqui-Centennial Exposition in Philadelphia. Space has been allotted for this purpose and each of the five schools in the college are now at work on the material for the exhibit.—A. L. B.

Toledo, Ohio, April 24, 1926.

Cloverseed, cash, domestic, $21; imported, $14.35; October, $16.65. Alsike, cash, $17. Timothyseed, cash, $3.40 asked; September, $3.50 asked.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Good and choice matured steers 15@25c lower; yearlings and lower grades of killing steers steady; stockers and feeders steady to 25c higher; better grade of yearling heifers, 25@50c lower; extreme top yearlings, $10.50; mixed steers and heifers at same price; heavies, upward to $10.35; lightweight heifers, $10; good fat cows and heavy heifers 25c lower; bulls 25c higher; vealers, steady to 25c higher.

Hogs—Mostly steady to strong; lighter weights dull, 15@25c lower; desirable 200@225-lb averages, $12.90@13.65; better 180 lbs down, $13.50@14; top on 150 lbs, $14; 240@350-lb butchers, $11.80@12.80; packing sows, $10.75@11.25; heavyweight hogs, $11.70@12.75; medium, $12.35@13.65; lights, $12.85@14; light lights, $13@14; slaughter pigs, $13.50@14.

Sheep—Compared with week ago: Fat wool lambs, $1.50@2 higher; clippers mostly $2 higher; spots up more on heavy and medium weights; yearling wethers mostly $1.25@1.75 higher; supply small; fat sheep generally 50c higher; shearing lambs very scarce, 75c@$1 higher. Week's top prices: Fat wool lambs, $16.10; shorn lambs, $14.25; 91-lb averages at that price late; wool lambs, $15@15.75; clipped lambs, $13@14; shearing lambs, $14@14.50; top, $14.65; fat wool ewes, $9@9.75.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, April 26th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.75@36.00
Spring bran	35.00
Soft winter wheat bran	36.50@37.00
Hard winter wheat bran	35.50
Standard middlings	34.00@34.50
Soft winter wheat middlings	37.50@38.20
Flour middlings	36.00
Red dog flour	40.00
White hominy	32.00
Yellow hominy	32.00
Gluten feed	38.35
36 per cent cottonseed meal	38.75@38.85
41 per cent cottonseed meal	41.50
43 per cent cottonseed meal	43.00
34 per cent linseed meal	54.20@54.25

Millfeed in extremely light supply owing to reduced mill operation.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Feed Market Situation

FEED prices were again higher during the week ending April 22nd. Demand for near at hand feeds was urgent on account of the late spring and continued feeding, but inquiry was less brisk for the later shipments. Slightly higher prices for feed grains and hay also tended toward a firm market for feedstuffs.

Wheat feeds were very strong. Mill output was very light at western points on account of the dull flour trade and offerings of wheat feeds were quickly snapped up. Bran was relatively firmer than shorts and middlings. Offerings for immediate delivery were commanding substantial premiums, altho dealers were cautious about accumulating stocks at present price levels and were buying for immediate needs only. Some mills were quoting materially lower prices on new crop wheat feeds for late summer shipment.

Linseed Meal Firm

Linseed meal has also been firm and prices have advanced. Production was again reduced in the West and mills were offering no meal for April shipment and resellers' stocks were firmly held.

The market for cottonseed meal ruled firm with other feeds altho domestic demand was only fairly active. Large amounts were being sold for export in the Southwest and a number of mills were closed for the season.

Alfalfa meal prices have worked higher principally on account of higher prices for alfalfa hay. Delayed pasturage has increased the demand for hay while the press of spring work and bad road conditions have restricted the country marketings, so that hay prices have shown a sharp advance which is reflected to some degree in the alfalfa meal market.

Corn feeds have ruled steady to firm. Prices of gluten feed have been unchanged and demand has been only fairly active. Hominy feed prices have advanced slightly and trade reports indicate that production of this feed has been curtailed recently. White hominy feed was selling at 50c premium over yellow hominy feed at Chicago but white and yellow were selling at the same price at Philadelphia recently.—United States Bureau of Agricultural Economics.

County News and Comment

Adams County, Pa.—All vegetation about ten days late. No bloom yet. Farmers busy plowing, hauling manure. Few oats sown. Much complaint of showing of grass on last year's stubble fields. Wheat fields have come thru winter very well. Eggs not hatching well this year. Sows are farrowing good litters. Wheat, $1.62; oats, 50c; corn, 70c; milk, $2.40; eggs, 27c.—A. R., April 20.

Berks County, Pa.—April thus far very cold. Sod plowing about half finished. Very little plowing for oats and none sown. Grass fields begin to look green, altho plants look small. Wheat and rye fields beginning to turn green. Clover seed all sown. Apple trees received their first spray. A lot of well developed ear corn remains in county. About the same number of vacant farms this year as last. Young chicks doing fine and farmers raising more than for years. A lot of small colony houses built this spring. Spring shipment of feed and fertilizers by the local Grange received and unloaded. All livestock in fine condition. Very little wheat on farms. Local prices: wheat, $1.65; oats, 50c; rye, $1; corn, 75c; potatoes, $3.25; eggs, 28c; butter, 52c; poultry, 28c.—W. N. M., April 19.

Carroll County, Md.—Some farmers were busy preparing soil and sowing oats when on April 6 it snowed. Ground was white towards evening, then snow turned to rain. Farmers are busy making gardens, preparing soil, sowing oats, hauling manure, cutting and hauling firewood, pruning fruit trees and sowing cloverseed. Wheat did not look as well April 1 as it did March 1, the March freezing having damaged it somewhat. All growing grain is backward for time of year. Alsike, sweet clover and alfalfa also suffered from March freezing, the plants having heaved quite a bit. Prospects for fruit crop continue good. Market is reported not very favorable for canning crops, it is time of year for signing contracts but so far have heard none of prices offered by canneries. Poultry business going full blast.—H. I. R., April 10.

Fayette County, Pa.—Weather very cold and no rain for some time. A large amount of plowing finished. Some farmers sowing spring wheat, some already sown. There will be plenty of oats sown because little wheat was sown in fall. Grass not starting very fast, too much cold weather. Fruit trees very slow starting to bud. Hay scarce and in great demand. Winter wheat looking very good and farmers look for a good crop. Gardening and trucking starting slowly. Hogs scarce and in great demand in county.—E. H. V., April 19.

Lebanon County, Pa.—Spring is three weeks late. Plowing for corn and oats not half done. High winds keep wheat back and delay clover seeding in wheat. Mice did much damage to trees during the winter. Some can be saved by bridge grafting. Cleft grafting about over and trees being planted. Many will be remembered as Sesqui-Centennial trees. Plant yours. Our county is very little but its wheat average for 1925 is big, 23.5 bushels per acre. The nation's average is only 12.7 bushels. Many radios installed within a year. Many miles of road will be constructed this summer.—R. I. W., April 19.

McKean County, Pa.—Farmers have been able to do scarcely any spring work so far. April 15 the mercury stood 15 degrees above zero. Today it has been snowing. Orchard demonstrations have been held on different farms in the county this spring. Forest planting demonstrations will be held April 29th. The slogan is "Learn to Grow Timber." Very few farms have changed hands this spring and fewer auction sales have been held. State College extension workers have been holding sewing centers and home interior decoration demonstrations, which have attracted the attention of many farm women. Prices: eggs, 35c; potatoes, $3; maple syrup, $2; hay, $15.—F. J. H., April 16.

Mifflin County, Pa.—Weather fair and cool. Many farmers have commenced to plow. Most ground in good condition, wheat fields looking green but have not made much growth yet. Some cloverseed to sow yet. Fruit buds are coming on, peach blossoms will open as soon as there are a few warm days. Some work is done on public roads. State is building a few miles of road in this part of county. Also expects to complete the main highway between McVeytown and Mount Union. Public sales are over and were well attended and most everything brought good prices. Dealers paying for wheat, $1.55; corn, 65c; oats, 40c; potatoes, $1.75; butter, 45c; eggs, 26c; lard, 18c; chickens, 22@30c; apples, $1.50.—J. H. B., April 15.

Monroe County, Pa.—Spring extremely late here. Little plowing done yet. Some farmers have sown clover seed. An extremely cold wave passed over county April 12 to 17th. Thermometer registered as low as fifteen degrees. Constant high winds during month did little damage to winter grain. Fishermen quite successful on fifteenth in spite of cold wave. Many farmers still hauling wood for summer's use. Most of county roads have been scraped and are in fairly good condition. Potatoes retailing at $1.40 per peck; veal calves, 13c; pork, 18c; early seed potatoes very scarce. Eggs, 28c. Good cows on public sales bring from $50 to $100 each.—G. E. S., April 19.

Warren County, N. J.—Only one night so far the ground has not frozen. Some ground broken for corn and some for oats. Wheat and grass fields look just as brown as in March, but rye is showing a little life. Custom hatcheries are doing a good business. Eggs hatching very poor, only about fifty-five per cent. Hens not up to standard in production. The spring pig crop is arriving and large litters are the rule. Cows doing fairly well and the price of milk continues up. Feed prices about the same. Wheat has dropped to $1.50; rye, 90c; oats, 60c; corn, $20 ton with market glutted; eggs, 28c; butter, 42c.—A. S. P., April 20.

Prices and Prospects

POTATOES, after reaching the highest prices paid since 1920, slumped during the week ending April 21st. The break in the market was due to the heavy supplies and to buyers holding off and purchasing only on a hand-to-mouth basis. The shipping point markets were dull and prices dropped sharply. Pennsylvania round whites declined about 50c per 150-pound sack in Philadelphia and were selling at $8.00 to $8.25 at the close. Shipments from practically all sections were lighter. The growers, however, expect another rise in prices as is shown by their tendency to hold stocks on hand rather than to sell at present levels. New potatoes also weakened as shipments from Texas and Florida became more active.

The New York egg market was irregular during the week ending April 21, but toward the close there was a firmer tone and prices advanced slightly. The scarcity of Pacific Coast eggs caused the large buyers to turn to nearby stock and prices were well maintained on these. A large part of the output on the coast is being stored in that section, or is going into other distributing centers. The market on April 21 closed with nearby extra firsts selling at 33c to 34c per dozen and gathered firsts to extra firsts ranged from 31c to 34c. Receipts of eggs in Philadelphia during the week were heavy with 44,703 cases arriving on the market. Of this number Pennsylvania supplied 3263. The market was firm and the best grades met a ready sale. At the close extra firsts sold at 32½c and firsts at 30½c.

The live poultry market in New York was firm with light receipts and prices advanced. Light fowl were in active demand, while heavy stock was slow sale. Express broilers were rather quiet but express fowl sold well. Receipts of fresh-killed poultry were light and the market firm. Nearby hot house broilers were scarce due to the high prices for livestock.

Wheat Market Firm

The wheat market developed a firmer tone during the week ending April 17, due to reports of lighter stocks on hand in the principal surplus producing countries. Higher wheat prices and a more active demand for feed grains resulted in advances of about 1c to 2c per bushel. The oats market was firm with slight increases at most markets.

Late pasturage in many sections resulted in a brisk demand for hay thruout the week and the light offerings sold readily. Spring work and bad roads restricted country marketings and good hay was in active demand but all grades sold readily. Timothy was firm. Light arrivals and stocks forced prices higher at New York. Top grades advanced at Boston and the Pittsburgh market ruled firm.—W. R. Whitacre.

You get what you pay for in any Kelly tire

ASIDE from comfort, when you buy tires you buy them for just one thing—mileage. When you buy Kelly-Springfield tires, you get it.

Every tire that leaves the great Kelly-Springfield plant is as perfect as we know how to make it.

Every ounce of rubber in the carcass and tread of a Kelly tire is tough, new, live rubber.

You get what you pay for when you buy a Kelly tire. You get an honestly built product containing the best materials and the most skilled workmanship obtainable. That means mileage. And in addition, you get the extra comfort that comes from the flexible Kelly construction.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Carbide Residue

Please inform me whether the residue of carbide is of any benefit to the soil? Can it be used the same as lime or is it harmful to plant life?—R. B., Bucks County, Pa.

The residue of carbide is essentially a combination of air-slaked and water-slaked lime. Like any other lime of this character, it is useful for ameliorating the condition of acid soils as well as for improving the texture of heavy clay soils. Therefore, carbide residues contain substances harmful to plant life. However, when such residues are exposed to the air for several weeks these harmful substances seem to disappear.—J. G. Lipman.

To Renew Pasture

I have a clearing, limestone land, which I use for pasture only, I cannot farm it. The pasture seems run out and I want to renew it and do not know just what kind of seed would be best. Will you advise me what and how would be the best way to sow it?—S. M. W., Franklin County, Pa.

The following procedure may be recommended for restoring your pasture.

1. The field should be plowed next spring and summer fallowed until about the middle of August, when it should be seeded down.

2. The plowed land should receive an application of lime, and the latter thoroly worked into the top soil. Ground limestone at the rate of one and one-half to two tons per acre, or burned lime equivalent to 1500 to 2000 pounds per acre, may be employed.

3. A fertilizer mixture consisting of 300 lbs. acid phosphate, 50 lbs. bone meal, 100 lbs. muriate of potash, 100 lbs. nitrate of soda, may be employed at the rate of 600 pounds per acre shortly before seeding down.

4. A grass mixture, consisting of two lbs. timothy, two lbs. red top, two lbs. fescue, three lbs. Kentucky blue grass, two lbs. red clover, one lb. white clover, two lbs. alsike, two lbs. alfalfa and two lbs. sweet clover may be used at the rate of twenty to twenty-four pounds per acre.—J. G. Lipman.

Alfalfa with Wheat

Please tell me how to start alfalfa with my wheat. How much of the seed should I use and when should I plant it? What are the lime and fertilizer requirements?—G. H. W., Northampton County, Pa.

If you intend to sow alfalfa with your wheat, it should be put in just as soon as the weather and soil conditions will permit. Use six to eight quarts of seed per acre. For putting the seed in you could use a hand wheel-barrow seeder or if this is not available, use grain drill with grass seed attachment. After seeding go over the field with weeder or smoothing harrow set very shallow.

If alfalfa has never been grown on this land, it would be safest to inoculate the seed or use soil from a field where alfalfa has been successfully grown.

If the soil is known to be distinctly acid, use pulverized limestone at the rate of 3000 to 4000 pounds per acre or an equivalent amount of some other form of lime.

A suitable fertilizer could be made by using 50 to 75 pounds of nitrate of soda, 250 to 300 pounds of acid phosphate, and 25 pounds of muriate of potash; or if you prefer, you could use about 300 pounds of a 3-8-3.—A. W. Blair.

Cattle Feeding Experiments

THE farmers in Pennsylvania and eastern states are always interested in the results of cattle feeding experiments that are conducted at the different experiment stations where feeds, similar to those produced in the East, are used in the test.

A considerable amount of experimental work has been done at the Indiana Experiment Station with farm-grown feeds and splendid results have been secured. The work conducted during the past year has just recently been brought to a close and some interesting results secured that may be of value to our eastern feeders.

Work During the Past Winter

The work during the past winter was conducted with two-year-old cattle that weighed approximately 850 pounds when put in the feed lot and were valued at $6.90 per cwt. at the beginning of the experiment. The cattle were fed for a period of 140 days.

Five lots of cattle with ten steers per lot were fed in the experiment. The combinations fed were as follows: Whole soy beans, corn silage and clover hay; cottonseed meal, silage and clover hay; cottonseed meal and soy bean hay; cottonseed meal, silage and soy bean hay; and silage and soy bean hay. In addition to the above feeds all lots received a full feed of shelled corn and salt was allowed in all the lots.

The total gains made per steer in each of the lots were as follows: 366 pounds, 338 pounds, 329 pounds, 362 pounds, and 341 pounds, respectively. The profit per steer, based upon the current price of feeds, including the value of the gains made by the hogs on the feed lot, were $9.93, $2.65, $1.09, $7.26 and $9.68.

Soy Beans Prove Satisfactory

One of the outstanding features of the experiment this year was the greater profit made by the cattle in the lot receiving soy beans in place of cottonseed meal. These same results have been received in four preceding trials at the Indiana Experiment Station.

The average daily gain per steer was quite uniform in all lots ranging from 2.35 pounds per steer per day in the lot receiving cottonseed meal, soy bean hay and shelled corn to 2.62 pounds per steer in the lot receiving soy beans, silage, clover hay and shelled corn. The cost of making 100 pounds of gain varied from $9.95 in the shelled corn, silage, and soy bean hay lot to $13.05 in the lot receiving shelled corn, cottonseed meal and soy bean hay.

The price of feeds in figuring the results of the experiment were as follows: corn 55c per bushel, cottonseed meal $40 per ton, soy beans $1.35 per bushel, silage $5 per ton and hay $20 per ton.—W. H. Tomhave.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW FAILS TO GET WITH CALF.—We have a cow and can't get her with calf. She is five years old. She was with calf and fell in August and lost her calf. I have tried her every time she came around. Can you please tell me what to do?—C. E., Shippensville, Pa. We can advise no specific cure. It is a case requiring an examination by a graduate veterinarian familiar with the anatomy of the reproductive tract.

INJURY TO FOOT.—I have a horse that became lame about a month ago. When I removed his shoe some pus came from one of the nail holes. A couple of weeks ago pus began gathering at top of the hoof. This was lanced and treated with iodine frequently since, but apparently without results. How should he be treated?—L. R., Hooversville, Pa. Better have your veterinarian treat this horse. He will remove any excess tissue and use the necessary antiseptics to control the infection.

MANGER BOIL.—I have a brood mare that has a manger boil. I opened it but it is back again. It is about as big as a half gallon pail. I would appreciate it very much if you would tell me a good remedy for it.—H. B. C., West Sunbury, Pa. This boil should be opened by a competent surgeon who will probably pack it with gauze. The mare should be put in a box stall without a manger until healing has taken place. The after care usually consists in washing the abscess with an antiseptic solution until the wound has healed from the inside.

LUMP ON SHOULDER.—I have a horse weighing about 1400 pounds, twelve years old, which I work on my farm. About a year ago he got a lump on his shoulder. I had a veterinarian look him over and he says it is too deep to cut. Could you tell me is there any cure for it? It gets larger when he works and it seems to hurt him a little.—J. F. R., Sewel, N. J. As a usual thing these lumps can be removed surgically. If the sore is of such a nature as not to warrant removal, there is little relief to be expected from local applications. The part should be kept clean and as dry as possible. Boric acid powder may be dusted on at night.

COW GIVES VERY LITTLE MILK.—I have a cow that freshened last week and does not give a quart of milk a day. Her calf died about two hours after birth. This cow was milked until about three weeks before she was due to freshen and had to be gradually dried as she gave a good bit of milk. She does not seem a bit sick and cleans up all feed given her. Could you please tell me what I could do for her?—F. P., Rea, Pa. This cow would probably have given the usual amount of milk had she been dry longer. Continue to milk regularly, massaging the udder at each milking as a means of stimulating the gland tissue. She may show a gradual increase in her milk flow.

UDDER IS INFLAMED.—I wish to know what to do for a cow that has been fresh five weeks. The udder has been swollen over one teat only, ever since. The milk is not thick and seems all right but it is very hard to get out. I milk three times a day. I have kept her bowels very free.—W. E., Curwensville, Pa. This condition frequently occurs following the freshening period. The blood supply to the gland is increased and the part becomes hard and painful. Frequent milking, massage of the udder and bathing with warm water has a tendency to restore the part to normal. See that the diet is laxative in nature, using oil meal, roots and bran as a part of the ration.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

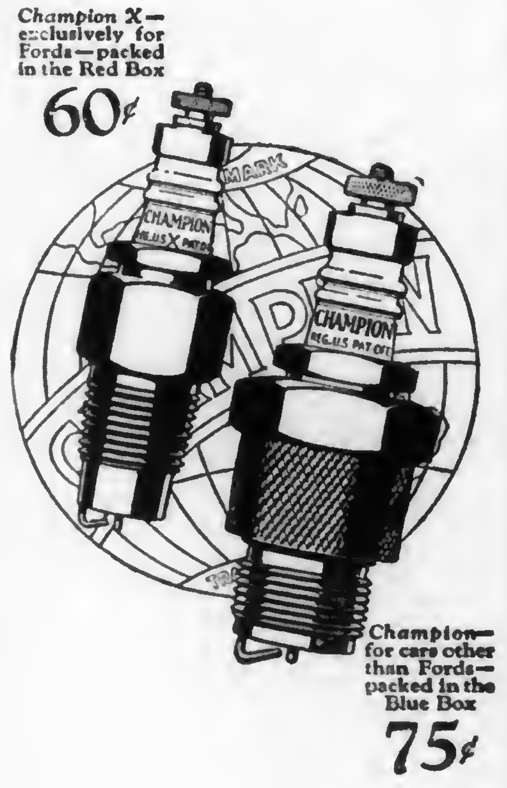
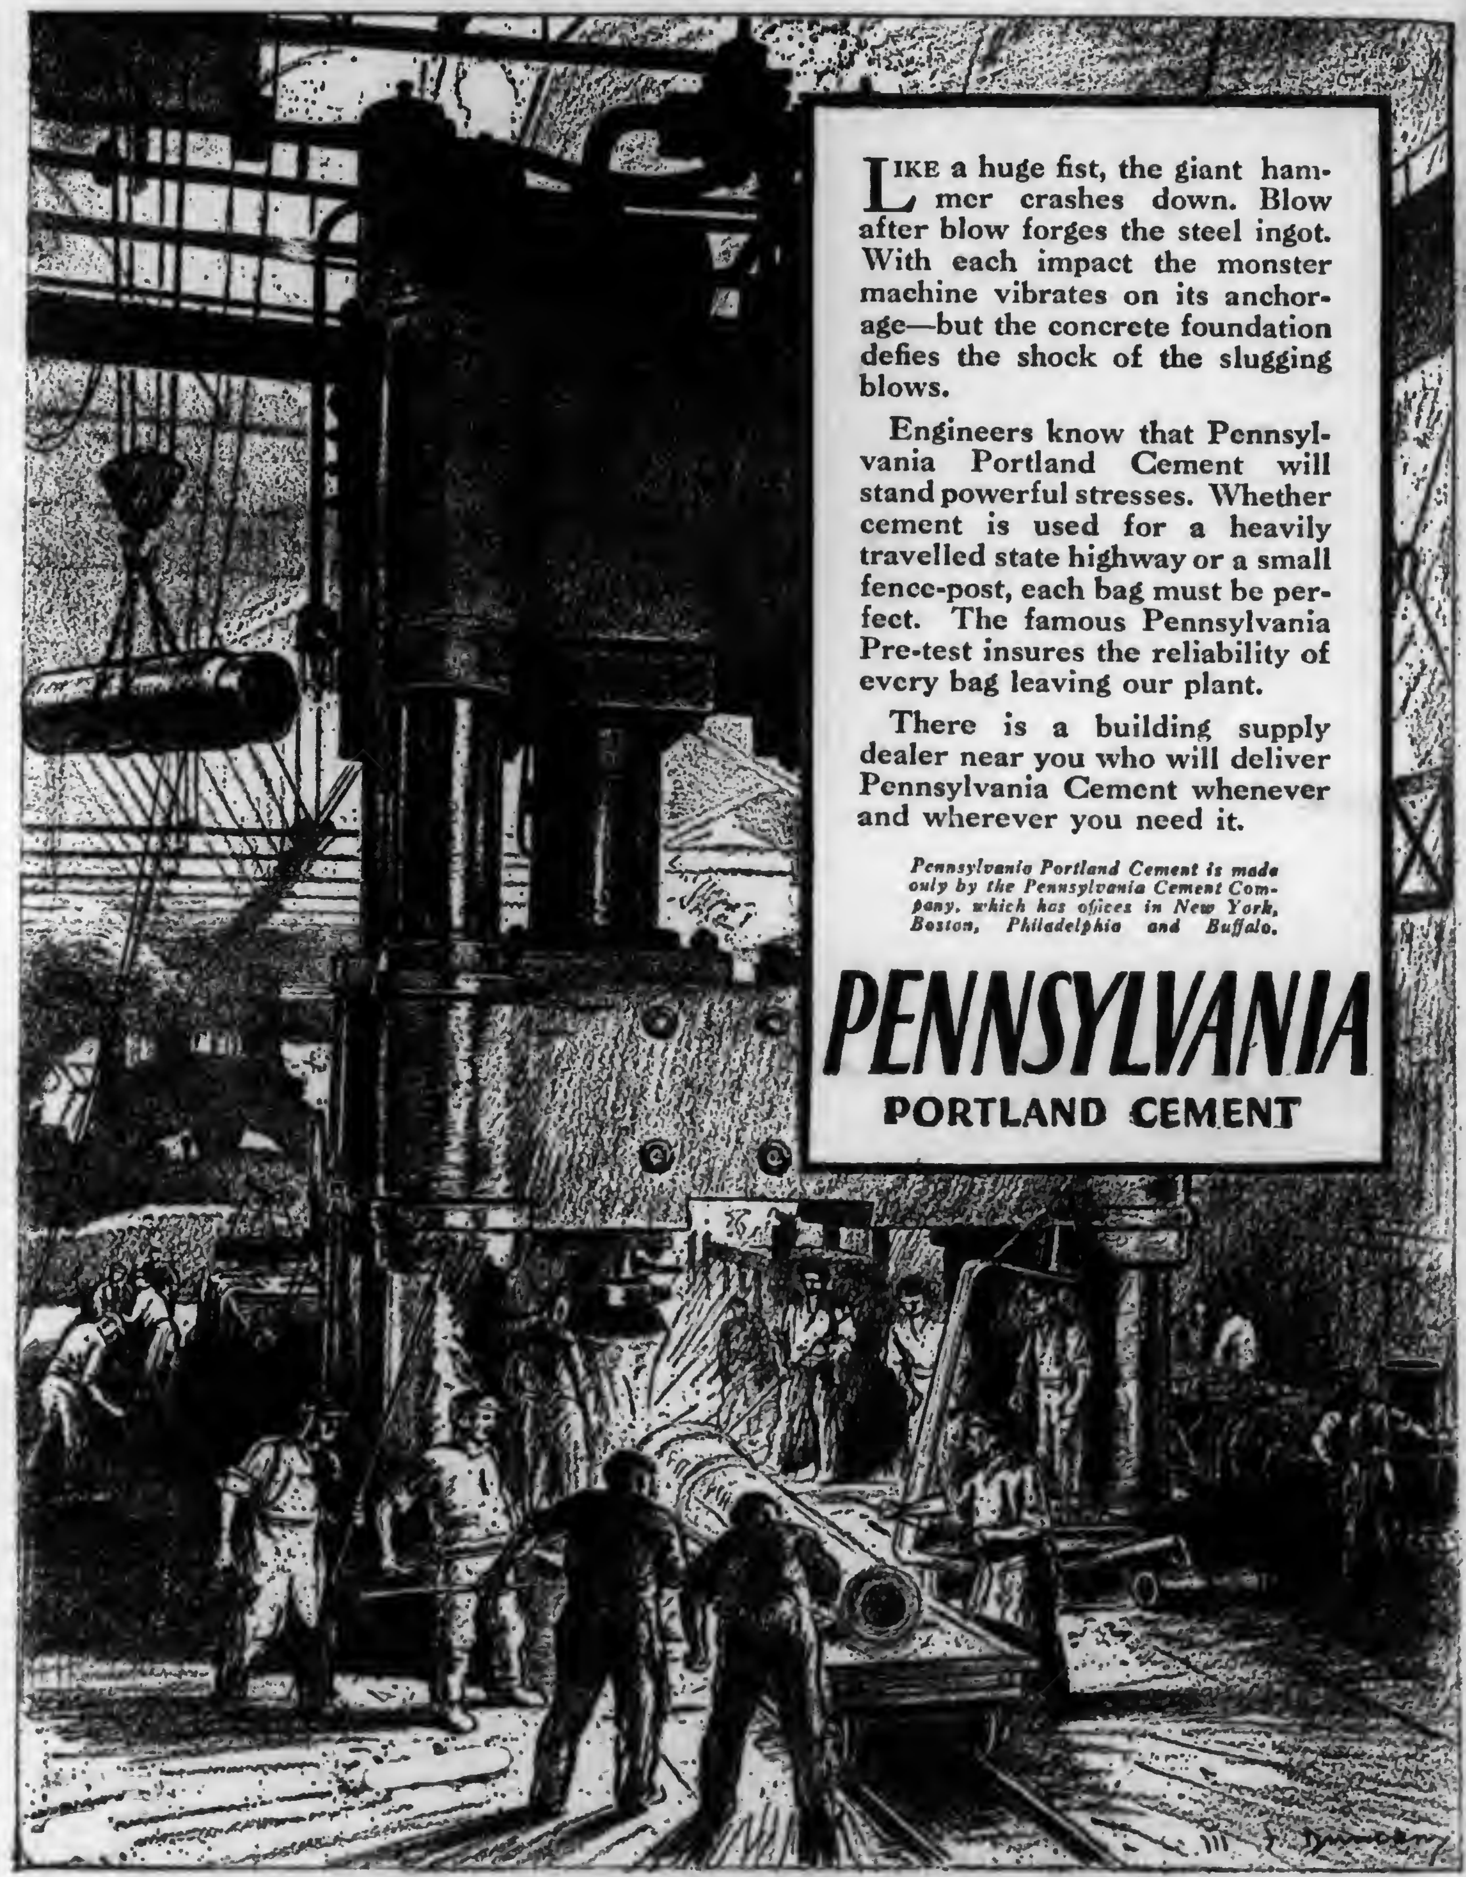
CHAMPION NATIONAL CHANGE WEEK
MAY 2 to 9



Champion X—exclusively for Fords—packed in the Red Box
60¢
CHAMPION
Champion—for cars other than Fords—packed in the Blue Box
75¢

Hundreds of thousands of motorists will make certain of better engine performance for another year by installing new spark plugs during Champion National Change Week, May 2 to 9. If you have used your spark plugs more than 10,000 miles, install a full set of dependable Champions now. They will bring back engine power and speed, forestall tinkering and costly repairs; and save their cost many times over in less oil and gas used.

CHAMPION
Dependable for Every Engine
Toledo, Ohio



LIKE a huge fist, the giant hammer crashes down. Blow after blow forges the steel ingot. With each impact the monster machine vibrates on its anchorage—but the concrete foundation defies the shock of the slugging blows.

Engineers know that Pennsylvania Portland Cement will stand powerful stresses. Whether cement is used for a heavily travelled state highway or a small fence-post, each bag must be perfect. The famous Pennsylvania Pre-test insures the reliability of every bag leaving our plant.

There is a building supply dealer near you who will deliver Pennsylvania Cement whenever and wherever you need it.

Pennsylvania Portland Cement is made only by the Pennsylvania Cement Company, which has offices in New York, Boston, Philadelphia and Buffalo.

The New Highway Stand

Main Road Farmers!

put your youngsters in business this summer

There's good money in running a roadside market. Sell fruits, vegetables, home cooked food, candy, preserves, ice cream. Anyone can do it who's old enough to make change. Split the profits with the youngsters and teach 'em real business this summer. Costs nothing to try—our free instructions tell how!

The new Hiway stand is all you need to start business. Designed by experts. Built entirely of steel; canvas shade covering. Baked green enamel finish, attractive and desirable. Trays, racks and shelves are detachable, will display anything you want to sell. Shipped knock down; sets up in a few minutes. Costs much less than plain lumber.

Descriptive circular free

Complete book, "Making Money at Roadside Stands", also sent free when you buy your first Hiway Stand.

SAMSON
Tractor Repairs
Also parts for Truck, Disc and Plow. Can furnish any piece and ship direct to you at regular prices. Write W. D. HOYT, 806 S. Saginaw St., FLINT, MICH.

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

"The crows went over and pulled up my neighbor's corn"

writes J. B. Meyers, of West Salem, Ohio. And from that day on Mr. Meyer's crow troubles were over, "for," he said further, "I tested your Crow Repellent and found it to be just as you recommended."

"Will never try to plant corn without it," is what C. C. Mulchmore, Pike, N. H., says about its value.

"I could not find a hill pulled," is the word we get from G. White, Whitehall, N. Y.

"I recommend it for every corn-raiser," is the way the letter reads from J. Putnis, Wolcott, Vt.

"Crows give my corn-field a wide berth," says H. Van Oslen, Catskill, N. Y.

Stanley's Crow Repellent

is the one sure cure for crow troubles. Not only crows, but moles, squirrels and all pests will leave your corn-field severely alone, if you coat your seed-corn in it, just before planting. You don't have to wait for it to dry, and it positively will not clog the planter. It is not poisonous, and therefore, will not kill birds or animals, but, it WILL keep your cornfields free from damage that runs into money and time, if you have to keep re-planting all the time.

Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.60. Half size can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, then order direct. Read our "Money Back" guarantee. Address, Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

Go to your
Goodrich Dealer
for these
Five Reasons-

1. Because the Goodrich Line provides a tire for every make of car and kind of service.

2. Because all Goodrich tires made, to-day, are cords.

3. Because all Goodrich cords are built with the same wonderful principles of construction as the famous Silvertown cords.

4. Because Goodrich during the past year spent millions in cord tire improvements, and

5. Because in the Goodrich Line you will find the right tire for your purpose—*priced right!*

Your Dealer Will Give You Two More Reasons

The first is that he is there to serve you and your community. He must depend upon your trade. You can depend upon him.

The second is that with every Goodrich tire he sells you, he and Goodrich stand back of its quality. There is no gamble with any Goodrich Tire. It is the product of 56 years of rubber manufacturing experience. It has no equal for *genuine* economy.

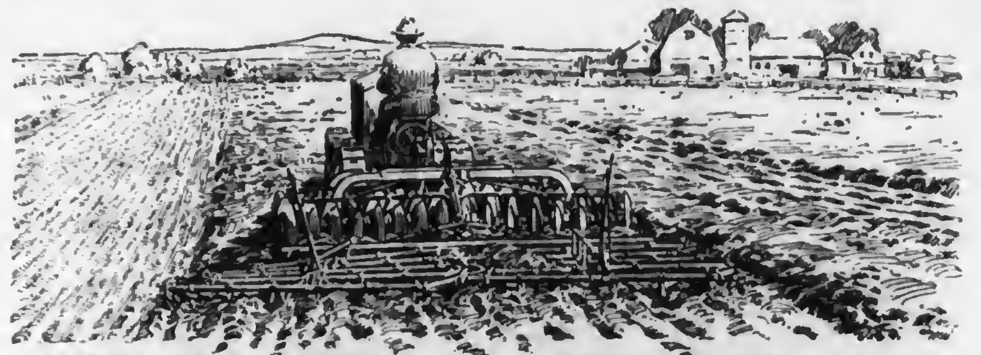
"Best in the Long Run"



All the Power You Need ~ Any Time ~ Any Place!

CLETRAC Crawler Tractors give you an abundance of easily controlled power that can be profitably applied to scores of farm jobs! Cletrac power cuts labor costs—changes hard tasks to easy ones—and renders long years of dependable, economical service.

Positive Traction that Saves Fuel

Running lightly on their own broad tracks, Cletrac Crawler Tractors grip the ground with the sure-footed traction that saves fuel and oil. There is no slipping even in muddy ground or on steep hillside work. Cletracs turn within their own length and because of this fact and their low-down, compact construction they are ideal for work in close quarters.

An All-Purpose Power Unit

For plowing, harrowing and seeding—for mowing, reaping and feed grinding—pulling stumps, removing snow, hauling and many other farm uses, Cletracs deliver downright satisfaction. There is a Cletrac dealer near you who will gladly demonstrate the outstanding superiority of these remarkable year-round power-units. Write us today for his name and for interesting illustrated literature on Cletrac Tractors.

The Corn Borer

Getting Down to the Facts about a Destructive Enemy of the King of Grains

By C. L. WHITE

Secretary Willits in an Ontario cornfield where every stalk was destroyed.

IS THE European corn borer a real menace to the agriculture of Pennsylvania and other corn growing states?

Within the last few days we have been bringing our own information about the borer up to date, in an effort to arrive at an answer to that question. This article will summarize briefly the more significant facts about this insect invader from Central Europe.

A narrow belt of land extending entirely around Lake Erie comprises the area where the European corn borer has been doing the most damage. The counties that have suffered most are Kent and Essex in Ontario, Canada. They lie on the northern shore of the lake, about 150 miles due west of Erie County, Pennsylvania.

The amount of damage done in these Canadian counties may be judged from the field pictured on this page. Practically every stalk was so completely eaten out by borers that it was broken off by a light wind, if it had not collapsed under its own weight before the wind came along. The ears had reached the milk stage. They were a total loss, too, being made worthless by the mildew which accompanies the work of the worm.

Borer-Ridden Ontario

Fields similar to this one could be found last fall on nearly every farm where corn was grown in Kent and Essex Counties. Conditions were nearly as bad in Elgin and Lambton Counties. It is reported that the value of farm land in the borer-ridden section of Ontario has dropped about fifty per cent; that great numbers of farmers are moving out; that not more than one-quarter of the normal corn acreage will be planted this year.

The situation now in extreme northwestern Pennsylvania is very similar to what it was in these devastated Canadian counties two years ago.

The corn borer, (scientists call it pyrausta nubilalis), spends the winter in the larva or worm stage, being found principally in corn fodder, stubble, etc. It is the larvae that damage the crop. In some places many dozens of them are found in each stalk of corn. They are brownish white worms about an inch long. They have a dark brown head and the body has numerous small brown dots.

When warm weather comes in spring the larva cuts a hole in the wall of the stalk so the moth which is shortly to develop will be able to escape. Then it spins its cocoon, still remaining in the tunnel which it has eaten in the pulp of the stalk.

After spending about two weeks in the pupa stage the insect emerges in the form of a moth. The moth is about three-fourths of an inch long and has a wing spread of slightly more than an inch. The female is cream colored with a brownish tint. It has three wavy bands of purplish brown across the wings. The male is smaller and darker in color. Each female lays several hundred eggs in small clusters on the under side of corn leaves. When the larvae hatch they are about one-sixteenth of an inch long, but they eat a lot, and soon reach their full size.

It is the moths, of course, that are responsible for most of the spread, altho the live worms may be carried in fodder or corn cobs where the quarantine is not strictly enforced. Marked moths have been known to travel twenty miles in one season.

The entomologists say that the moth in flight likes to head into the wind. If a light breeze is blowing the little butterfly is able to make progress against it; but if the wind is strong the insect is carried along. The prevailing winds over Lake Erie blow slightly south of east. As the map shows the moths seem to travel the same way, mainly, but some of them go in the opposite direction flying against a slight breeze.

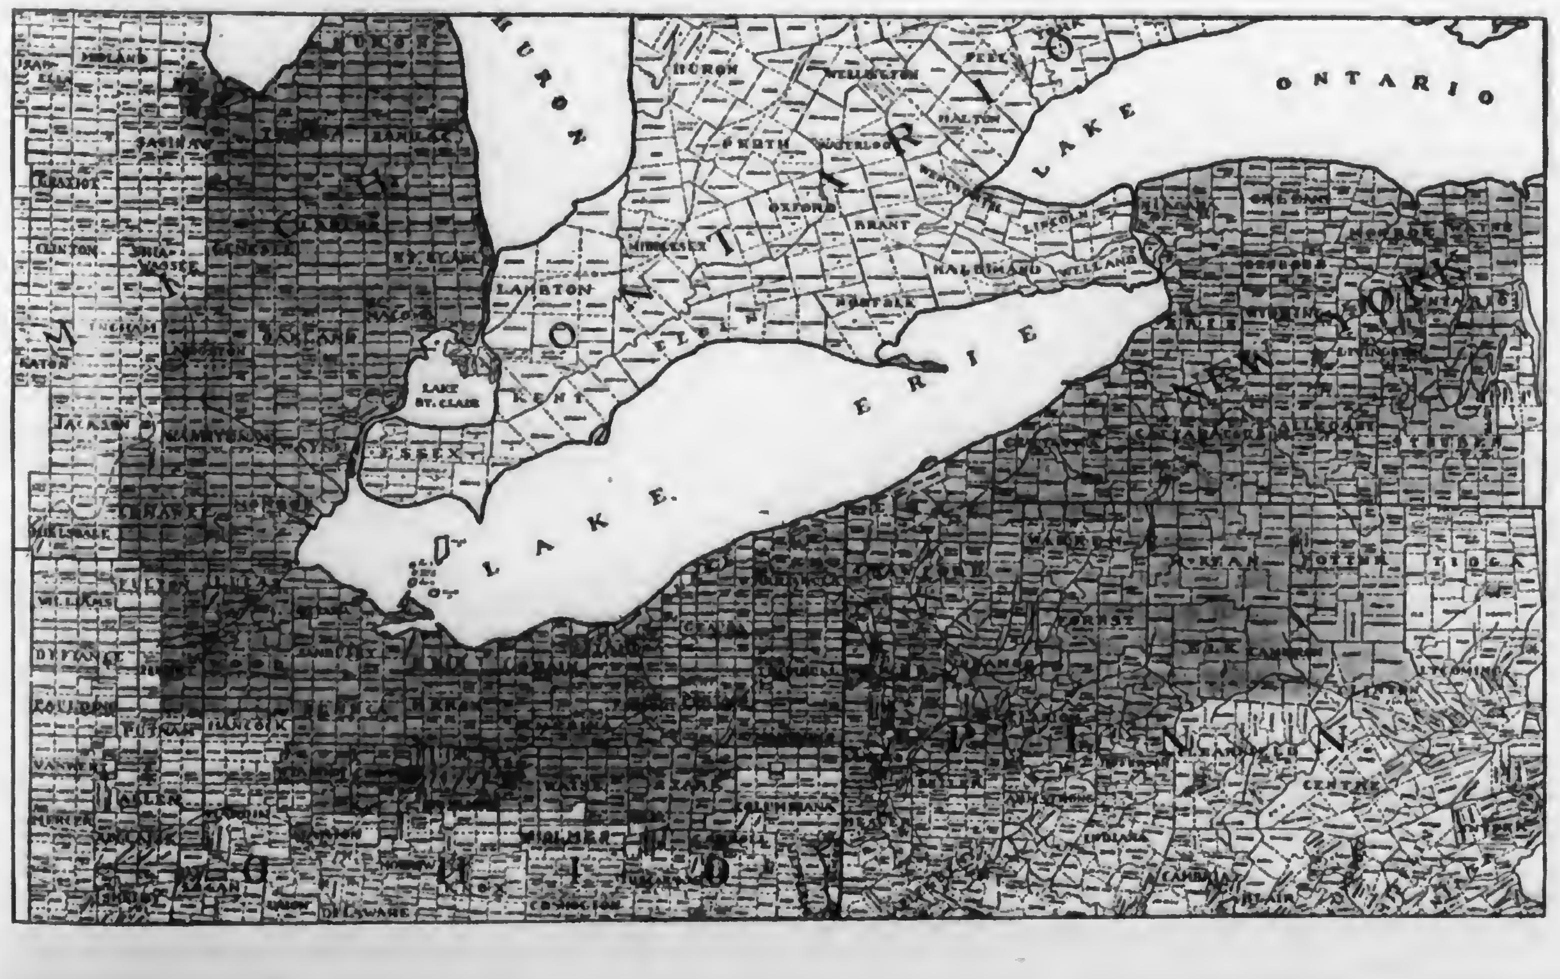
Last year and the year before millions of corn borer moths were in the air in the badly infested part of Canada. Probably large numbers of them were blown across Lake Erie into Pennsylvania and New York. This may account for the very startling spread of the pest the last two years.

Invited the Pest to Stay

The system of harvesting followed by Canadian corn growers when the borer first appeared was very favorable to its development. Corn stover left in the field or barnyard and tall stubble offer ideal wintering places for the borer. The Canadian farmers had lots of these wintering places, and the borers made themselves at home. Their unsuspecting hosts awakened too late to the importance of cleaning up all corn crop remnants, taking advantage of the enemy while it is without wings with which to fly away.

The corn borer infestation in Pennsylvania is not as severe as our map might seem to indicate. Altho the borers have been found in practically every township within the shaded area, they are numerous only in the region close to the lake. Fearing that this area along the

(to page 25)



THIS map shows where the European corn borer is at work. Practically all of the Province of Ontario shown is infested, but the worst damage has been done in thecounties of Essex and Kent, along Lake Erie.

The borer has been found in all the shaded parts of Pennsylvania, New York, Ohio and Michigan. Note how the prevailing winds over Lake Erie seem to be carrying the pest eastward into New York and Pennsylvania. The spread toward the west and south is much slower.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Neither days nor lives can be made noble or holy by doing nothing in them —John Ruskin

Winter Wheat Condition

THE condition of winter wheat on April first was reported as being 84.7 per cent of a normal one. This is over sixteen per cent better than the condition on the same date last year. Since the acreage is reported as being nearly the same the prospects are that a much larger crop will be harvested in 1926 than in 1925. However, the local condition,—that of New York, Pennsylvania, New Jersey and Maryland,—is reported as being eight to eleven per cent below last year's condition on April first.

The Sesqui-Centennial

RAPID progress is being made in the preparations for celebrating the one hundred and fiftieth anniversary of American independence in Philadelphia the coming summer. With almost Aladdin-like speed great structures are appearing and an immense amount of preparatory work is under way. The promotors promise a great exhibition and are expecting tens of thousands of visitors during the months it will be open. The opening services have been scheduled for June first, but if one can make only one visit we would advise waiting until a later date as it will be impossible to have everything in completed form by that time. The city and the states adjoining are giving special attention to putting the highways in good shape in anticipation of an immense automobile traffic Philadelphiaward.

Have You a Reputation?

IS YOUR farm noted in the county or neighborhood for any special product? Have you specialized on some one thing until it is noted for its dependable high quality? Or are you satisfied to turn out year after year mediocre stuff having no individuality? These are questions which every farmer should ask himself and answer honestly. It is not necessary to have a show place or costly equipment to turn out something that is so superior as to make a name for itself and for the farm.

We once knew an old gentleman who was known far and near for the high quality of his smoked sausage. He found the right methods and stuck to them faithfully. People sent to him every year for their sausage and every year it was just the same. A woman living on a back road farm, with no equipment but that used fifty years ago and a cold springhouse, became an artist in making a quality of butter far above the common run and people drove for miles to get it. The amount she could sell was limited only by the amount she could make. A certain man in central Pennsylvania made a study of growing, storing and packing high quality apples, and after a few years his fame spread so that everything else but the growing of apples was dropped. Even then the demand was greater than his supply.

In these, and all such instances, character and dependability created and maintained the reputation. Success must not lead to a letting down in the matter of making honest goods. Altho consumers of such products consider price the last thing, yet it is well not to be too greedy. However, products with a reputation always bring more money than the common stuff. It takes time, patience and intelligence to produce anything that will be recognized as superior but it pays in the end and gives the producer a glorious sense of independence and satisfaction.

An Agricultural Day

A BILL formally establishing a day in October to be nationally known and observed as Agricultural Day is to be introduced into Congress very soon. The National Grange sponsored the movement at its last meeting and several State Granges have since approved it. It is not the intention to make it a legal holiday, but it is thought that if officially proclaimed and generally recognized in various ways the publicity gained will do much to direct the public's attention to agriculture. We have Labor Day, Arbor Day, Armistice Day and various other special days when public thought is directed for a special purpose and it seems to be effective. The second of February has made the groundhog a nationally known figure. If the establishment of Agricultural Day would bring agriculture before the whole people in a fitting way, it might do much to offset some of the harmful publicity engendered by the city papers at present by their critical comments on proposed farm legislation.

Technical Research

A FINE example of the benefits of laboratory research work of the right kind on technical agricultural problems is afforded by the activities of the Bureau of Dairying of the United States Department of Agriculture. A powder made from whey in the Bureau of Dairying laboratories is being used in place of dried egg albumen in the manufacture of candy. It is said that about one-fourth of the cost of the materials in certain kinds of confections is egg albumen, of which about twelve million pounds are imported annually from China. Confectioners pay from one dollar to one dollar and fifty cents a pound for egg albumen, and are showing much interest in this whey powder substitute which could be sold at fifty cents a pound.

At a luncheon given delegates of the American Dairy Federation who met in Washington recently, the Bureau of Dairying served nougats in which whey powder was used. A soluble powder made in the laboratory from Swiss cheese whey was used in the cake in place of eggs. A skimmed milk powder made in the laboratory by a process which insures proper baking quality was used in making the bread. The Roquefort cheese was made from cow's milk at the Grove City Creamery by a method developed in the Bureau of Dairying laboratories, and the Parmesan cheese was made partly from skimmed milk, altho it is one of the highest priced cheeses on the market.

A poultry food is being made from skimmed milk at the Bureau of Dairying laboratories by a method which promises the development of a new commercial industry with skimmilk its basic raw material. Thru the laboratory experiments of this bureau, every by-product of the creamery and cheese factory is put to profitable use.

Care of Pastures

THERE will doubtless be an inclination on the part of many to turn their cattle out to pasture before the grass is sufficiently started to give it a fair chance. The long feeding period and the extremely late season will prompt this action. However, it will pay to make haste slowly in this matter. Pasture injured by turning the cattle on it too soon is injured permanently, and the value of the feed destroyed is worth more than it will cost to keep them off a few days longer. In connection, we wish to recommend the economy of top-dressing pasture lands early in May. A dressing with a fertilizer containing five or six per cent of nitrogen, seven or eight per cent of phosphoric acid, and four or five per cent of potash,—two hundred to four hundred pounds per acre,—will pay well, providing there is a good or fairly good stand of grass.

Partially Deaf

IN THIS modern world of ours nearly every big event of importance is put "on the air." The radio listener gets a much better idea of what is going on at many big affairs than those who are jammed in the crowd at the scene of action. The radio announcer always has the best seat, and he sees and hears for all his listeners. The person without a radio is partially deaf. He is missing much that is going on about him,—much that is exceedingly interesting, as he will discover if he gets into a crowd of talkative radio fans.

There were 18,432 radio receiving sets on farms in Pennsylvania on January 1, 1926, according to the estimates of the State Department of Agriculture. Altho the number very nearly doubled in a year's time, even that figure seems smaller than it should be.

The Weed Tax

SOME taxes have to be paid, but not the weed tax. The weed tax in Pennsylvania amounts to a total of about $2.00 per tillable acre or about $120 per year for the average farm. That is the estimate of county agents on the amount of loss caused annually by weeds in Pennsylvania farm crops.

Those who wish to eliminate this cause of loss on their own farms will find some valuable suggestions in General Bulletin Number 416, "Pennsylvania Weeds," which may be obtained free from the Pennsylvania Department of Agriculture, Harrisburg. This publication contains pictures by which the most troublesome weeds may be identified and gives the methods of killing them that have proven to be most effective.

Washington Letter

ADMINISTRATION BILL EXPECTED TO PASS.—Out of the maze of conflicting forces in Congress working for farm relief legislation will come the enactment of the Tincher-Jardine-administration bill to establish a federal farm advisory council and a federal farm marketing commission provided with authority to loan money to cooperatives for the purpose of handling agricultural surpluses. This is regarded as a foregone conclusion on Capitol Hill.

SUBSIDY MEASURE OPPOSED.—The Haugen bill to establish a federal farm board with extensive powers in handling surpluses directly or thru delegated agencies, which now has the support of the American Farm Bureau Federation, has been drastically amended. It provides for a revolving fund from the Federal Treasury of $375,000,000, and the collection of an equalization fee is postponed for two years. During these two years losses sustained in dumping the surplus would be borne by the government. There is objection to this plan by some who favored the original Corn Belt committee plan, because it is regarded as a direct subsidy.

THIRD BILL REPORTED OUT.—The Curtis-Aswell bill, also known as the Yoakum plan, which sets up a national farm marketing association, farmer controlled, has been reported out of committee along with the Tincher and Haugen bills. It is planned to call up the Haugen bill on the floor, with the other two bills as substitutes. It is expected that farm relief legislation will come to a vote in both houses within the next ten days.

ACTION ON MUSCLE SHOALS LEASE.—The majority report of the joint Senate and House Muscle Shoals disposal committee recommends a fifty-year lease of the property to the Alabama Power Company and twelve affiliated power companies. The power companies offered to pay an annual rental of from $2,000,000 to $3,000,000, according to use, nearly twice the amount offered by the joint bid of the American Cyanamide Company and the Air Nitrates Corporation, but there is nothing in the power companies' bid to insure cheap fertilizer or cheap power, or the production of explosives for national defense.

The power companies by their bid actually agree to produce 5000 tons of air nitrates, but not every year, unless there is a demand for it, which is improbable owing to the high cost of power.

GRANGE BACKS PROHIBITION.—The farmers' views on the prohibition enforcement question as voiced by the Grange were presented in a statement prepared by Dr. T. C. Atkeson, Washington representative of the National Grange, and filed with the Senate investigating committee by S. L. Strivings, Master of the New York State Grange.

The purpose of his statement on behalf of the National Grange, Dr. Atkeson said, was to emphasize to the Congress that this organization stands squarely in favor of putting the full power of the federal and all state governments into the job of enforcing the existing prohibition laws, and of strengthening these laws, without loosening one iota of their intent in making it impossible to legally manufacture, transport, offer for sale, or sell alcoholic liquor of any kind.

CANAL PROJECT LOST.—The defeat by the New York state Legislature of a resolution proposing a constitutional amendment to authorize the ceding or sale to the federal government of the New York barge canal for ship canal purposes, is held by opponents of the plan in Washington to mean the end of the fight looking to the government to take over the barge canal and convert it into a ship canal. This leaves for consideration the St. Lawrence route and the Bowen ship canal plans.

HEARING ON BUTTER SUBSTITUTES.—There will be a public hearing in the vegetable and animal oils and fats investigation before the United States Tariff Commission in Washington beginning May 25, at which time interested parties will be given opportunity to produce evidence with regard to the differences in costs of production. Dairy organizations are especially interested in the tariff on soya-bean oils, oleo oil and oleo stearin which are used in the production of oleomargarine.

STATUS OF MISCELLANEOUS BILLS.—Opponents of the Capper-Kelly bill proposing to enable manufacturers to control the resale prices of their trademarked products were heard recently by the House Interstate and Foreign Commerce Committee. A. M. Loomis, who appeared on behalf of Dr. T. C. Atkeson, of the National Grange, favored drastic prohibition of price fixing or maintaining price contracts.

The Gooding-Ketcham seed staining bill has been signed by President Coolidge and is now a law. It will be in operation in thirty days.

The Perkins-McNary standard container bill has been reported out of the Senate Committee on Manufactures and will probably be passed before the session ends. It is in good position for action in the House with no opposition in sight.

WHAT IS THAT, JAMES?
YOUR YEARLY EGG SIR, TODAY IS NATIONAL EGG DAY, SIR!
IF YOU HAVE NEVER TRIED ONE IT WILL BE A GOOD DAY TO BEGIN!
AH, I SEE BY YOUR VEST THAT YOU ARE CELEBRATING THE DAY, MR. BROWN.
YOU BET, AND I SEE BY YOUR CHIN THAT YOU ARE PATRIOTIC TOO, MR. JONES
NATIONAL EGG DAY
MAY FIRST
DO YOUR DUTY, BIDDY! SAY IT WITH EGGS!
LEET?

Some things that happened on National Egg Day.

The tuberculosis eradication appropriation is believed to be in danger of failure to pass. The House reported the sum of $4,650,000, while the Senate bill calls for $6,000,000. The Senate refuses to accept the report of the conferees for any amount less than $6,000,000, so it goes back to conference the second time.

The $75,000,000 appropriation for highway construction is in about the same position as the T. B. appropriation bill. The President has mentioned highways as being one place in which reductions can be made, and the appropriation is having slow sledding thru Congress.

The Johnson deportation bill which provides that aliens shall be returned to their native lands if convicted of felonies and certain misdemeanors has been reported favorably by the House Immigration Committee.—E. E. Reynolds.

Harrisburg Letter

MORE RADIOS ON FARMS.—Pennsylvania farms are estimated to have 18,432 radio sets or over 8000 more than a year ago. The radio appears to be growing as much a part of farm equipment as the telephone and the motor car.

GETTING RELICS.—State authorities have been offered a number of interesting farm relics for the state exhibits at the Sesqui-Centennial, several of them being plows with long records of work. In several instances articles in use before the Revolution and still owned by families who held them long ago have been offered for exhibition.

SHIPPED MORE POTATOES.—Figures compiled at the State Bureau of Markets show Pennsylvania shipped over 6300 cars of potatoes in 1925 or 2000 more than in the previous year. This is an excellent record in opinion of men here and it is interesting that almost 4000 cars were loaded in the three fall months, which is almost twice as many as in the preceding year's autumn period. In the matter of carload shipments Lehigh, Potter, Northampton and Berks were the four leaders. Lehigh had 1565 cars.

RURAL SCHOOL CONFERENCE.—People interested in rural schools from the official, teaching, taxpaying and parent standpoints are to be invited to a state-wide conference on the rural school situation in Pennsylvania to be held here the middle of May. Dr. Francis B. Haas, the state superintendent of schools, who was asked to call the meeting at a gathering here a few days ago, says the idea will be to get a state-wide view of the rural education problem and then put such plans as are considered feasible in the form of legislation. The general plan will be for a discussion of the situation from all angles and for a statement of what way of financial aid.—Hamilton, Harrisburg.

New Jersey Letter

MEMBERSHIP DRIVE THIS FALL.—The farm bureau at the regular spring meeting of its executive committee in Trenton on April 26 approved the offering of membership to New Jersey farmers this fall on an annual renewal, rather than the three-year basis as previously followed. The county boards will take the responsibility for membership work in their respective counties, the state office training the county and township leaders. In deciding upon the number of members which may be expected from each county, the various boards have approved a quota, based upon thirty per cent of the actual number of bonafide farmers in the county. The present year's membership has been pledged very generally by the boards on the same basis as last year.

STUDY CREDIT SITUATION.—Work has been started by the state Department of Agriculture in cooperation with the New Jersey State Bankers Association to line up the credit situation in the state. The department is sending a questionnaire to the agricultural committee of all banks in the state which serve the farm territory. In this way an expression of the needs for credit and the development of a more constructive policy in making loans will become established.

SPEED SHIPMENT OF PERISHABLES.—Marketing officials in New Jersey will make a special effort this season to find ways and means to shorten the time of delivery of perishable fruits and vegetables. The project contemplates the use of combined railroad and truck shipments, the trucks serving as feeders to import stations thus enabling fast express trains to carry the produce to market with few stops. H. B. Bamford, of the Bureau of Markets, is taking general direction of the project.

TO UNITE HERD OWNERS.—The inspection of dairy herds will eventually be conducted in the state on an area basis, according to plans now under way. Nearly 3000 herds of cattle are already under supervision as a result of intensive work carried out in the last few years in testing individual herds. By going at the work on a county and township basis, the united action of all herd owners, it is thought, will eradicate bovine tuberculosis in the most effective way. Actual work will be started very shortly.

FEDERATION-GRANGE PICNIC.—The New Jersey Federation of County Boards of Agriculture and the New Jersey State Grange will unite again this year for a state-wide farmers' picnic. A convenient location in South Jersey will be selected. At a meeting in late April, the date of July 29 was decided upon as the most convenient time for the membership in both North and South Jersey.—B.

New York Letter

LEGISLATURE ADJOURNED.—The Legislature has adjourned this year's session after what is considered a fairly fruitful session. The main business effected was the reorganization of the entire state government, thru the recommendations of the Hughes Commission. The main adverse criticism of these bills is that the changes made were too few. The new form of government will be in full operation January 1, 1927, and the next Legislature will probably amend the law as all cannot be accomplished in so big a task in one year. The next most important legislation secured has to do with crime laws. The Governor's water power program did not go thru but the state now has a method by which state water power can be developed without cost to the state, and with prospects of fair play to the consumer. Farmers received comparatively little attention this year, excepting in Assemblyman Rice's bill to tighten up the regulations regarding the disposal of condemned tuberculous animals.

OPTIMISTIC DAIRY VIEWS.—Acting Dean C. L. Ladd, of Cornell College of Agriculture, in looking ten to twenty years ahead, has little fear of injury to eastern dairying thru the invasion of western milk on their markets. He does believe that there is danger of overlapping of markets for short time periods. He believes the Corn Belt farmer will never take kindly to the type of farming that means daily handling of milk and the careful attention to detail necessary to compete with eastern dairymen. He thinks attention to more attractive dairy plants is a fruitful way of convincing city motorists of the quality of eastern milk. The shortage in cows and young stock is real, but even a few cents increase in price would bring out more milk almost at once, he believes.

SPRING WORK.—There has been little moderation of temperature yet and spring work generally is the latest known. Old potatoes are $3.25 per bushel and up. The maple season is over in central and southern counties, with a short output of syrup.—M. G. F.

COLT LIGHT IS SUNLIGHT

SAFEST AND BEST BY TEST

When the sun goes down
. . . come home to light and cheer

WHEN rain threatens and you've been doing your best to catch up with your planting or plowing—come home to the bright, cheerful light of your Colt Plant!

A Colt Plant soon pays for itself. It lets you stay with your crops—you don't have to stop work to milk and feed up. You can do that *after dark* far more quickly and *safely* with Colt Light than you could hope to do with an oil lantern. Simply turn on your Colt barn light—and your barn shines as bright as day!

Colt Light is even more necessary in the home. Your children can get their lessons with no danger of eyestrain. Reading becomes a real pleasure, and your wife will enjoy sewing after supper.

Colt Light provides gas for cooking and ironing—does away with cleaning and filling of oil lamps.

It has no complicated parts to regulate or to get out of order. All you have to do is to refill the generator an average of two or three times a year with Union Carbide, at a cost of only a few dollars.

Colt Plants are priced very moderately. They may be paid for on convenient terms if you are a property owner. More than 2,000,000 people are enjoying carbide gas light tonight.

For your family's comfort, for your own benefit —investigate Colt Light! Let us send you our *free* booklet, "Safest and Best by Test."

The sale of Colt Plants offers a great opportunity for the ambitious farm-trained man. Write our nearest office for full particulars.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

THE red raspberries and the blackberries set last spring seem to be in good shape, except that a few died during the drought which followed their planting last year. I cannot say so much for the black raspberries. They are subject to mosaic and anthracnose, two diseases which have destroyed the business of raising black raspberries in many localities. The latter disease may be controlled by spraying with Bordeaux. One thing which causes the public to become disgusted with expensive officialdom is the realization that it is paying an army of inspectors to inspect nursery stock and protect the purchaser from plant disease, only to find that purchased stock is full of disease. In some states at least, it is time the inspectors were inspected.

* * *

FROM a newspaper clipping I learn that a Pennsylvania orchardist was awarded damages to the amount of $50,000 because several thousand peach trees purchased a few years ago proved to be not true to name. The case was bitterly fought but the jury awarded the damages stated. If the verdict is sustained in a higher court it will have a salutary effect on all nurserymen who are careless in filling orders received. If every purchaser of nursery stock would keep a copy of his order, (in which it should be stated he prohibits substitution,) and bring suit when the stock proves untrue to name it would soon become unprofitable to substitute.

* * *

WE HAVE had a good bit of "fair" weather during the past two weeks, —some of it cold and windy and some very warm,—in which we got a good deal done at Neshaminy Gardens, altho the same work was done earlier last year. Asparagus, garden truck and early potatoes were planted previous to April 24th. The berry plants have been pruned and cultivated. If the weather seems promising we plan to risk planting some string beans and sweet corn by May first. A good rain on the night of April 24 was well timed.

* * *

IN SOME of the small towns of eastern Pennsylvania it is almost impossible to bring garden peas to the eating stage because the blackbirds rip open the pods and eat the green peas before the housewife gets to them. So far, we have had little trouble at the farm with these pests but I cross my fingers as I say this. They started on one row two years ago and we stuck a few sticks in the row and stretched twine on them. To the twine we tied small pieces of muslin. This stopped further ravages, but whether it is a sure cure we are not able to say. Anyway, it is worth trying.

* * *

SO FAR we have had little indication of borers in our young trees. I have found two or three of the peach trees affected but no borers in the apple trees. Of course, they will come later. We have no expectation that they will continue to slight us. While the recommendations for using paradichlorobenzene to kill borers in peach trees say that trees should be not younger than five or six years we shall try it on the few infected two-year-olds. While this material has been recommended and used for peach borers for five or six years there are no doubt many who do not know about it. I suggest that such write to their experiment station for bulletins on the subject.

* * *

I KNOW a few men who got all four feet in the trough last year when planting sweet corn and string beans. The results were so disastrous that they will not plant any this year. Farmers who swing like a pendulum from one extreme to the other are a nuisance in the business of farming. The worst thing about it is that they always swing opposite to the market movements and hence lose money. High prices for a given crop last year is no reason whatever for planting an excessive crop this year. The extremely high price of seed potatoes this spring will doubtless keep a good many of this kind of farmers from making fools of themselves this year.

"Mamma," said a little boy who had been put to drying a towel before the fire, "is it done when it's brown?"—Pearson's Weekly.

THE CHEERFUL PLOWMAN

Feeding My Hens

IN OLDEN days I used to feed with no thought of a chicken's need, they got what came to hand,—a pail of screenings or of wheat, or anything a hen would eat, the meal was never planned. One day, perchance, I'd give them oats, poor chickens with their hungry throats, another day some rye, then if some crushings were on deck I'd hurl those in for them to peck with tear-drops in the eye! No system! None at all, by jing; the Fijis' non-commissioned king had more well-ordered plans, I simply fed by hit and guess, dished out an ill-assorted mess, I was a foolish man!

Altho my hens were fed on trash I used to roar, and rave, and crash, because the eggs were few: "Those hens," said I, "are punk and mean, the bummest bunch I've ever seen, a non-productive crew! I might as well clip off their heads and place them in their final beds, they'll break me if they're kept! They'll eat me out of house and land and place no money in my hand, as loafers they're adept!"

Ah, chump was I! Those hens of mine were honest, earnest, stout and fine, they had the proper blood, but where's the hen on earth, I ask, that can perform a winning task when fed on such a food? Where is the Biddy fed on hash who can produce a show of cash? The diet must be right! A balanced ration, fine and fair, well planned, proportioned, studied, square, —this must be kept in sight!—J. Edw. Tufft.

Attractive Grounds

EVERY farm house should have attractive grounds. Many of them are beautified with flowers and shrubs but a great many look as if "a widow lived there and her health was poor."

A lawn mower costs no more than many less useful articles that are more commonly purchased. A farm house should be no less blessed with beauty than are the homes in town. Many city dwellers drive miles into the country to get good soil and wild plants to enrich and beautify their small domains.

The farmer folks are busy people but we have wonderful resources near at hand,—leaf-mold and the rich black soil near the barns and the wood-yard, dogwood, May-apple, forget-me-nots, violets and ferns that will stand transplanting, to our door-yards. (We read that the beautiful dogwood shrubs are becoming very rare because they are sought so eagerly to be used in decorative schemes.)

We need not consult a landscape gardener if we have a love of the beautiful and a sense of harmony. Many helpful suggestions may be obtained from the beautiful illustrations in catalogs and magazines and many of the latter publish articles written by landscape gardeners. Diagrams often accompany these articles and by studying them closely one learns how to avoid serious blunders. Perennials are good plants for busy people. Strong roots placed in good soil will take care of themselves. Japonicas, lilac, spirea, syringa, hydrangea and roses are good shrubs for backgrounds. The trumpet vine, ivy and wistaria are dependable vines, lilies, peonies, iris, daffodils and jonquils are very hardy.

Consider Color Harmony

If flowers are grouped care must be taken that the colors harmonize. Purple iris should not be planted near red peonies, and pink sweet williams ruin the effect of pansy blossoms unless the latter are white. Red geraniums should never be placed in a porch box with petunias having a blue tint.

Yellow and white roses, iris, lemon lilies, spirea, white peonies and daffodils, with a background of lilac, produce a symphony of color that has no discordant note. Beautiful surroundings not only attract, they inspire, and the most beautiful things are so easy to get. We sometimes underestimate their worth. Beautiful home grounds help to keep not only the young folks, but all the family, on the farm.—M. C. S.

Gloucester Grange

LAND which sells for more than $200 an acre is too high priced for profitable farming, that was the consensus of opinion at a meeting of the Gloucester County Pomona Grange, held at Mullica Hill the latter part of April. The new Philadelphia-Camden bridge will force the farmer further and further back into the country as the cities continue to grow.

Mr. B. Owen Pancoast, a director in the Farmer's Fruit and produce Company in Dock Street, Philadelphia, and Alvin Gaventa, former president of the Farm Bureau, discussed the question: How can the farmer pack his produce so that it will create a world-wide demand? Moving pictures were used in the evening to illustrate the methods of better packing of cantaloupes.—Amos Kirby.

"I want to know how much money my husband has in this bank," demanded the lady masterfully, as she strode up to the cage.

"I'm sure I couldn't tell you that, ma'am," replied the official.

"Is that so? Well, why do they call you a teller, then?"

300,000 ESSEX OWNERS

They know its time proved value, its rare smoothness and performance, its sturdiness and economy

OF COURSE YOU WANT A "SIX" THAT IS TIME PROVED

Essex proved that everyone wants a "Six." But low price is not the only reason why 300,000 owners are praising it so highly, nor does price alone explain the reason for its continued sales leadership. Time proved qualities are what owners talk about. They speak of the little attention Essex requires and of how infrequent and small is the service cost.

They tell of economy in fuel, oil and tires. And they praise Essex smoothness in performance, its nimbleness and its power. They are the greatest Essex sales influence.

The Essex motor is built under Super-Six patents that give a performance and quality exclusive to this famous principle. Because of its vast production and the constant development of economical and precision methods of manufacturing its cost is little more than the lowest priced car on the market. Can you ignore such facts in the choice of your car?

NOW LOWEST PRICE IN HISTORY

At Your Door
With Nothing Else to Pay

Hudson-Essex dealers now quote "At Your Door" prices, including freight, tax and the following equipment:

Front and Rear Bumpers; Automatic Windshield Cleaner; Rear View Mirror; Transmission Lock (built-in); Radiator Shutters; Moto-Meter; Combination Stop and Tail Light

The "A. Y. D."—At Your Door plan is hailed as an assured step in merchandising automobiles. All doubt is removed as to the price you pay for your car equipped and delivered at your door. It saves many dollars.

Convenient and Easy Purchase Terms

Last year growers were amazed at the increased effectiveness and greater convenience of Pyrox spray. This year why not

give your crops every chance to produce the biggest possible yields

YOU, too, will be amazed at what the new improved Pyrox spray will do for your crops.

We've made it more effective than ever as a certain, positive, combined insecticide and fungicide. We've made it easier to prepare for use. Five minutes and you're ready to spray. No fuss, no bother.

You'll find that Pyrox not only saves time and produces better results, but that it is more economical. It goes farther and *it sticks*—making frequent sprayings unnecessary. And because it improves foliage it lengthens growing periods and increases crop yields.

It is more economical in the five, ten or twenty-five pound drums than in one-pound jars.

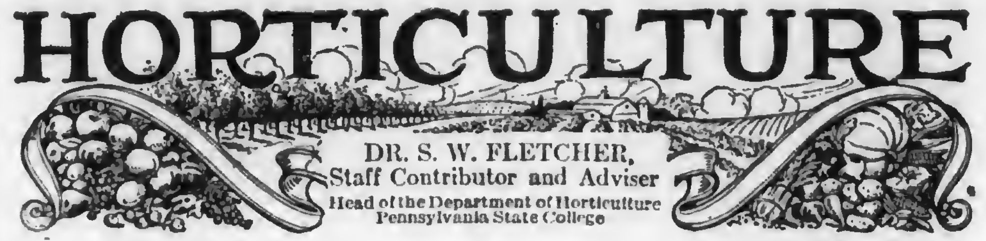
HORTICULTURE



DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture Pennsylvania State College

Maine a Competitor of Penna. in Apple Market

THE state of Maine is a competitor of Pennsylvania, not only in the potato market but also in the apple market. A large proportion of the average annual production of around a half million barrels is exported, Maine Baldwins coming in direct competition with Pennsylvania Yorks. This year Pennsylvania Yorks have outsold Maine Baldwins. The industry is centered in the southern part of the state, the northern part being too cold.

About half of the commercial planting in Maine is Baldwin, but McIntosh is rapidly crowding out that old time favorite, being hardier, more productive, and selling for almost twice as much per barrel in American markets. When Baldwin brings $3.50 a barrel in Boston, McIntosh sells for $7. Northern Spy is holding its own, and is even gaining ground. It comes into bearing fairly early there, some trees yielding two barrels at seven years. A windbreak of natural woodland on the northwest side of the orchard is a distinct advantage.

Fully seventy-five per cent of the orchards are in sod, mainly "witch grass" or "quack grass," which quickly takes possesion of the land. Nitrate of soda is used as freely in the sod orchards of Maine as in Pennsylvania but strangely enough, no benefit whatever is derived from the use of phosphate on the sod. The experiment station has found it practicable to hasten the bearing of Spy by tying down the lower branches when the tree is about five years old. The constriction of sap flow in these limbs throws them into bearing the following year, as in girdling.

To Prevent Broken Limbs

The snow piles deep and lies late in "down east" orchards. If the tree is low headed the weight of the snow often breaks off the limbs of young trees. This is prevented by tying up the limbs with binder twine until the tree is four or five years old; it is literally tucked in for the winter. Some Maine apple growers even try to hasten the melting of the great snowdrifts that bury trees by adding one quart of salt to a bushel of wood ashes and sprinkling this around the tree "to cut the snow."

Maine apple growers are interested in the methods proposed recently for securing better framework or scaffold limbs on newly planted trees, especially on varieties that normally have bad crotches, like the Delicious. They do not favor debudding, which has been found satisfactory in Pennsylvania. They prefer to pinch back all the shoots that start to grow except the few that are so placed as to make the best scaffold limbs.

They argue that the young tree needs the benefit of the rosette of leaves, resulting from the pinching back, in order to make the best growth. If the buds are removed entirely, the leaf surface is reduced, hence less growth is made in their experience. Some growers even practice the old German method of cutting a small notch above the buds that they wish to develop into scaffold limbs; this stimulates their growth.

Larger Trees Best for Planting

Dr. Sax, of the Maine Experiment Station, recommends the growers to propagate their own nursery stock, and to select only the largest trees for planting. He says that one can well afford to discard over half the trees, if necessary, and plant only those that are most vigorous; trees are cheap as compared with the cost of bringing them into bearing.

After testing the highly advertised "Bearing Tree Strains" and "Original Tree Strains," which refer to nursery stock that is said to be propagated only from bearing trees, or the buds taken from the original tree of the variety, Dr. Sax finds no advantage whatever in taking propagating wood from bearing trees, except the greater certainty of securing stock true to name. Buds taken from young trees standing in the nursery row give trees that are fully as good. This is the common practice of nurserymen everywhere, and is justified, provided the stock is kept true to name, by inspection.

Dr. Sax has found seedings of Tolman Sweet most desirable for budding; one third of them are large enough to bud the first season, thus saving a year as compared with the common method of budding apple seedlings the second year.—S. W. Fletcher.

Garden and Truck Crops

What do you put on cabbage and carrots when the worms eat them?—G. C., Potter County, Pa.

The cabbage root maggot and the imported cabbage worm are the most serious enemies of the cabbage crop. The yellow butterflies may be seen flickering over a cabbage field anytime after the first of May. The female alights near the edge of the leaf, laying her eggs on the under side. Depending upon the temperature, the eggs hatch in from three to ten days. The larva or worms feed on the leaves and if plentiful will eventually riddle the plant, leaving nothing but the mid ribs of the leaves.

The worms are usually not so bad on early cabbage and it is seldom necessary to spray the early crop. After the middle of July when the second brood comes on the plants should be sprayed. One pound of arsenate of lead to fifty gallons of water, plus one pound of rosin laundry soap is the standard spray to use. Paris green may be used in the same quantity as the arsenate of lead.

A second spraying about three weeks later than the first is usually necessary. In order to make the spray show up on the plants, about ten pounds of lime may be added.

Some growers prefer to dust. In this case, mix thoroly one pound of arsenate of lead powder with ten pounds of air slaked lime. Dusts will stick better if applied early in the morning when the dew is still on the plants.

I presume that the worm you mention as attacking carrots is the carrot rust-fly. The maggot of this insect feeds in the roots after causing severe damage in storage. No good method other than good clean-up practices has been devised.—W. T. Tapley.

Elect a Senator Who Helps the Farmer

PINCHOT, as Governor, has done more for the farmers of the state than any other Executive Pennsylvania ever had.

PINCHOT has made the Department of Agriculture really serve the farmer. Under Pinchot more than twice as much is being spent for the farmer than in any other four years.

PINCHOT is the only man who ever put a farmer on the Public Service Commission.

PINCHOT has made tremendous progress in eradicating tuberculosis among the state's milk cattle. One-half of the cows in the state will have been tested by the end of the administration.

PINCHOT has protected the farmer from plant and animal diseases and insects. Remember the war on the Japanese beetle---and what the gang did to handicap it.

PINCHOT has emphasized the importance of Pennsylvania State College, and found more money for its School of Agriculture.

PINCHOT has paid off a $31,000,000 deficit that the gang accumulated. He pays the state's obligations on the nail---and the schools now get their money on time. And the smaller school districts get far more help than in any previous administration.

PINCHOT stands squarely for the 18th amendment. Everyone knows where he stands on this great moral issue.

PINCHOT IS FIGHTING

Against Vare, who represents the corrupt Philadelphia political machine---with its phantom voters, ballot box crooks and fraudulent count of votes. Vare is Wet.

Against Pepper, who represents the Pennsylvania Railroad, the big corporations, and the Pittsburgh political gang with its ballot box crooks. Pepper is wet where it pays, and dry where it pays.

Vote for Gifford Pinchot

Republican Candidate for United States Senator
Primary Election, May 18

(ISSUED BY PINCHOT-FOR-SENATOR STATE COMMITTEE)

De Laval Milker Users from 47 States Say—

RECENTLY a questionnaire was submitted to De Laval Milker Users selected at random and located in all parts of the country. Replies were received from 1160, from every state except one. Following is a partial list of the questions and answers:

Q. Have you increased your milk production compared with hand milking?
A. **58.3% say the De Laval does increase their production over hand milking.**
29.6% say it does about the same.
10.6% say they do not know.
More than 98% say they produce as much as or more milk with the De Laval than they do with hand milking.

Q. How does it agree with your cows?
A. **98.5% answer favorably.**

Q. What saving of time and labor have you accomplished with the De Laval Milker?
A. **34.6% save 2.1 hours per day.**
25.7% save entire time of one man.
14.3% save 50% in time and labor of milking.
9.1% save entire time of two men.
1.2% save entire time of three men.

The results of this questionnaire show that the De Laval Milker has made good in a remarkable way. Already more than half a million cows are milked with De Laval Milkers and the number is increasing rapidly. Write your nearest De Laval office for complete information.

SO-BOSS SAVES MILK!
So-Boss Cow Hobble & Tail Holder. prevents cows kicking or switching tail. 75c—hardware stores or sent prepaid. SIMONSEN IRON WKS., Sioux Rapids, Ia

Blanchardville, Wis.
Dear Sir:
We have been looking for the best milk strainer on the market. Tried out four kinds and found Dr. Clark's Strainer far ahead of them all. It did all it was guaranteed to do and more. I have 42 of them with the farmers here and they're all giving satisfaction.
R. V. Austin
Supt. Blanchardville Creamery

"42 Purity Strainers and all Giving Satisfaction"

Many creameries and condensaries in the United States require that all milk supplied them be strained through Dr. Clark's Purity Strainers. In fact, many supply their producers with Purity Strainers as a means of insuring clean milk.

Purity Strainers are recognized as the one and only way of removing ALL dirt and sediment from milk. We guarantee those results or refund your money. Easy to use and easy to clean. No fuss or muss—saves time and labor. Endorsed by U.S. Government.

DR. CLARK'S PURITY MILK STRAINER

PURITY COTTON DISCS *are made in any size from 5½ in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.*

Made in two sizes—10 qt. and 18 qt. Ask your dealer. If he can't supply you, write us for literature and prices, giving your dealer's name.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry,
Pennsylvania State College

The American Dairy Federation Conference

REPRESENTATIVES from twenty different national dairy organizations, known collectively as the American Dairy Federation, met at Washington, D. C., April 19, 20, and 21 for a conference with the Bureaus of Dairying and Agricultural Economics, United States Department of Agriculture. The conference was arranged by E. M. Bailey, Pittsburgh, president of the federation; A. M. Loomis, Washington, D. C., secretary, and H. N. Woolman, Philadelphia; G. W. Slocum, Milton, Pennsylvania, and A. A. Borland, State College, Pennsylvania, the federation's committee on cooperation with the United States Department of Agriculture.

The conference spent one day in a study of the work being done by the United States Dairy Bureau, and one day in a similar study of the work of the United States Bureau of Agricultural Economics.

Mostly Research Work

Dr. C. W. Larson, chief of the United States Dairy Bureau, briefly outlined the history and work of the bureau, and stated that at the present time the bureau's work was chiefly along the lines of research. Work is being done in dairy manufacturing problems, breeding investigations, exhibits and publications, market milk investigations, and dairy production, the utilization of dairy by-products and the introduction of improved methods in dairy manufacturing. There are 162 employes in the bureau which has in progress over 200 active definite projects dealing with different phases of dairy work.

The Dairy Research Laboratories are in charge of Dr. L. A. Rogers, and experiments are being conducted in ice cream making, in nutrition of dairy cows, evaporated and condensed milk, chemistry and bacteriology of milk, cheese making, commercial dairy manufacturers, utilization of by-products, and milk powder.

The market milk investigations are in charge of Ernest Kelly. Among the problems which have recently been studied is that of the effect of plant management on the cream line. It was found that the pasteurization of milk at 140 degrees F. had no effect on the cream line. Pasteurization at 143 degrees F. for thirty minutes had little effect. Pasteurization at 145 degrees F. decreased the cream line eight per cent, and at 148 degrees F. the cream line was decreased thirty to forty per cent. The best results were obtained by cooling the milk quickly over a surface cooler at a temperature below forty degrees F.

Results of the Investigations

The results are set forth in detail in Departmental Bulletin 1344 which may be had by writing to the Division of Publications, United States Department of Agriculture.

Another study has recently been conducted on the physical properties of market milk and cream regarding the relation of pasteurization and homogenization upon the whipping qualities of cream. It was found that these two operations practically destroyed the whipping properties of cream. Ageing is an important factor in increasing whipping properties. Studies on the effect of feeds upon the flavor of milk show that garlic affects the flavor of milk in one minute after the garlic has been consumed. If strong flavored feeds such as garlic, cabbage, turnips, etc., are fed immediately after the milking rather than before, there is very little effect on the flavor of the milk. Department Bulletin 1075 gives information particularly relating to the physical properties of milk and cream.

A new bulletin has recently been issued on the cleaning of milking machines. This is Farmers' Bulletin 1315 which may be had by writing to the Division of Publications, United States Department of Agriculture.

The department has been very successful in devising practical methods for controlling flies in the dairy stable. Large fly traps were constructed and tried out with various baits, black strap molasses being found to be the most satisfactory. Over eighty-seven gallons of flies were caught with these ten traps. This is an estimate of over a half-billion flies. A spray made up with pythrerum has been found to be quite effective for spraying the walls and the cows to repel flies. Information on this subject may be had by writing directly to the Dairy Bureau.

In studies on the effect of grain feeding it was found that in one association a herd fed no grain had the least cost for feed, but this herd produced the least milk with the least amount of fat and had the lowest income per cow and the lowest returns above cost of feed of any herd in the association.

Returns from Purebreds Highest

Studies on the comparative returns from purebreds and grades and scrubs showed milk production respectively of 7667 pounds, 6999 pounds and 6217 pounds of milk. The butterfat production for purebreds, grades, and scrubs respectively was 296 pounds, 281 pounds, and 251 pounds. The net returns over feed cost for purebreds was $92.88 per cow annually, for grades $82.72 per cow, and for scrubs $65.87 per cow. The division is doing an immense amount of work in summarizing the cow testing association records in the various associations throughout the United States. It is also securing and comparing records of bull association daughters and dams with a view to locating proven sires thruout the country.

The delegates visited the government farm at Beltsville where the cattle on the experiment are kept. A considerable number of other interesting phases of feeding and breeding work are also being carried out there. For instance, it has been found that water in the ration does not affect the composition of the milk. Good, clean, sour milk has been found satisfactory for calves in the summer time, but in the winter time the sour milk appears to be conducive to scours. Cottonseed meal has been found undesirable for calves until they are at least one year of age. Milking three times per day has been found to give twelve per cent more milk than milking twice daily. Milking four times daily instead of three times gives seven per cent additional milk. Cows in box stalls produce five per cent more milk than those in stanchions.

Use of Box Stalls

The experience of Mr. T. E. Woodward, who is in charge of the farm, indicates that box stalls are needed only in case of sickness or maternity. Alfalfa hay was compared in feeding value to grain. The ratio of value between alfalfa hay and grain was found to be 1:1.85.

The second day of the conference was held in cooperation with the United States Bureau of Agricultural Economics. The Division of Crop and Livestock Estimates is in charge of W. F. Callander. This division publishes each February a supplement to Crops and Markets giving the estimate of the milk stock on hand January 1st. Estimates are gathered from 150,000 crop correspondents thruout the country. The division also publishes a monthly index of milk production, the monthly farm prices of dairy products, makes special surveys thru the rural carriers of the Post Office Department to show the make-up and changing numbers of milk stock.

The Division of Farm Management and Costs in charge of M. L. Wilson, senior analyst, conducts research work along various lines of farm management. Among the studies in progress at present may be mention-

If Your Dealer Does Not Handle Corn Gluten Feed, Any of the Above Named Manufacturers Will Supply You.

This Book—FREE

The only reason that a dairy cow does not starve to death on pasture is that the summer is not long enough. Even with the average pasture season thousands of cows are "starved dry."

You may think your cows make their increased yield of milk on the grass they eat, but you are deceiving yourself. The grass stimulates them, but it makes only a small part of the milk they give you. They rob their bodies to make the rest of it.

In the Fall when the pasture-fed cows begin to fail it is a sign that they have been starved dry. If grass made a big yield in the spring, why doesn't it continue to make milk when the cows fail or go dry weeks or months too soon?

The answer is simple. Grass was not enough. A grain ration, balanced with Corn Gluten Feed, will take your cows through the summer in good condition and full production.

Tens of thousands of tons of Corn Gluten Feed have been sold for shipment during the next three months. It will be fed to dairy cows. Millions of dollars will be added to the profits of their owners.

The Best and Safest Protein

Corn Gluten Feed is the best protein feed because it is more highly digestible than other rich feeds. It is safe because it is the pure protein product of corn. One ton contains the protein, mineral matter and vitamines of nearly four tons of whole grain.

Ask your dealer for Corn Gluten Feed. If he does not sell it, you can buy it from any manufacturer. In this case it will pay you to get several neighbors to join you and buy a carload together.

New 64-Page Book--Free

Mail the coupon for a copy of our new book, "The Gospel of Good Feeding." It contains 28 tested rations for dairy cows, beef cattle, hogs, sheep and poultry. The great feeding experts say it is one of the best books on feeding they have ever read. We will send you a copy free.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **the Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept., 518, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 518,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

A Need and a Supply

THE need and the supply of any sort whatever in the world are pretty well balanced if the two could but meet. This is referring more especially to farm homes where strong, healthy boys are needed so badly, and also to the uncared for, unwanted waifs to be found in many other places.

Many people hesitate to adopt such children because of the fear that some undesirable hereditary trait may develop and cause trouble and regret. If these children are left in their present state bad traits will surely develop, otherwise they can be averted in nearly all instances. The influence of environment is very strong.

I have in mind a boy who was, I believe, taken from the worst surroundings possible. The children had to go to school, and a discerning teacher saw a brown-eyed lad among them who seemed bright and attractive. The parents gave him to her and she took him into her home. What a change! Cleanliness, love, industry, Christianity in place of filth, blows, laziness and profanity. His response was immediate and unreserved. His foster mother told me he was as good to her as an own son could be. (She had two grown-up boys of her own.)

His advance in the business in which he engaged was rapid. He was handsome, respected, honest, clean and beloved. It was all in the shaping of the clay.

Children for the Farm Home

In the orphan asylums is material for lives that would enrich the world. Brains are there to be developed, bodies to be trained, characters to be formed. The farm home is the ideal place for such work, yet too many of them are lacking the freshness and joy that children bring. A child admitted to such a home will do as much for it and its occupants—repaying in mental and spiritual coin—as the farm people do for the child.—M. C. S.

Our Old Blind Horse

THE most intelligent farm animal I ever knew was a blind horse we had at home when I was a girl. She had not always been blind but was stone blind when she came into our possession.

We lived in a little village not far from town. My mother owned a farm about three miles out in the country. The road to the farm had some steep hills, sharp turns, many bridges and a watering trough along the way.

That horse knew every breaker, turn, and bridge in the road and she always turned in at the watering trough without any guiding whatever and if we were in a hurry and knew she didn't especially need water, we could scarcely get her by it.

She Knew the Church

Then, on a little farther, was the church and she always turned in there, week days or Sunday and we had to touch her with the whip to get her by it. When she came to the farm she always turned in at the barn, not missing it by a foot, and I don't think she ever saw the place when she had her sight.

On our way to town there was a breaker, a sharp curve, then a nice stretch of road on which my brother always liked to speed a little. So as soon as she crossed the breaker and rounded the turn, she would light out on a fancy trot without any urging. She never stumbled for we always drove her with a tight line.

We later moved to the farm and she always wanted to turn in at her old home in the village when we went by. She lived to be an old horse and served us better than many horses we had which could see.—Celeste Eva Serf.

We've Enjoyed Farm Life

WE LIVE on a thirty-acre farm located in South Jersey, raising mainly fruit and truck, with poultry as a side-line.

We have two sons. My husband came from town but I was born and raised on a farm, incidentally the farm which we now own. We both love farm life, and tho the work at times seems hard, we enjoy it. We both have seen enough of city life with its advantages and disadvantages, to prefer farm life.

We would like nothing better than for the boys to choose farming as their life work. We hope to give them a chance to get a college education as that is as much of an asset in farm life as in any other walk of life.

The Love of Nature

I hope I can instill into their lives the love of nature. I miss no opportunity to call their attention to a beautiful sky, a gorgeous sunrise or sunset, a beautiful plant or tree, or to interest them in the habits of birds and animals.

With all the advantages of farm life in this age there is nothing left to be desired. Our schools and churches are very good. Libraries supply us with good reading supplemented by the excellent farm papers, and the radio supplies us with the best music that the artists have to offer.

And last, but not least, I always feel as tho nature draws us closer to God, and no matter what vocation our sons choose our only prayer about them is that they may become God-fearing men.—Mrs. I. S., Atlantic County, N. J.

Some Pertinent Questions

I NOTED in Neshaminy Garden items recently the following questions: "Why should farmers complain and why should they be leaving the farms when the public is spending more money each year to promote better farming? Is it because the farmers will not learn, or is it because the costly aids and advice provided are not just what the farmers need most? Well, it is a good question but the author quoted did not answer it. Can you?"

Yes, there are approximately twenty thousand salaried advisors and aids in the agricultural department at Washington and hundreds in each state—"Costly Aids."

1. What is the motive of this so-called help,—sympathy for an underpaid service, or is it that there shall be more and cheaper food?
2. Why do city bureaus of trade and commerce push agricultural agencies?
3. Is this service doing something for or to the farmer?
4. Would the farmer fare better if all promotion agencies were withdrawn, including reclamation projects?
5. What farmer or publication will answer these questions in behalf of the man that feeds the world?—A. Farmer.

You Can Now Sell Undergrades at TOP PRICES

THE small fruit and sound windfalls you formerly sold at a big loss can be turned into profits. You can now make them into pure, sweet cider, and apple butter, jelly, vinegar, and the other apple products made from cider. And when you do you turn your undergrades into marketable commodities that enjoy a year 'round market—*at tip-top prices.*

Mount Gilead
HYDRAULIC CIDER PRESSES

Built by an organization with more than fifty years experience in the field, Mount Gilead Hydraulic Presses are famous for thorough effective pressing that extracts all the juice from apples, cherries, grapes and other small fruits. They develop a greater pressure and produce a larger yield of juice than any other cider press on the market. There is a Mount Gilead press for every requirement including roadside, orchard, and custom pressing work.

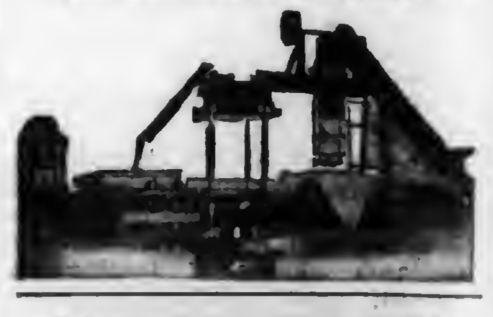
The Mount Gilead Process

Along with the Mount Gilead Line of Hydraulic Cider Presses has been developed the Mount Gilead Process of refining apple juice. This remarkable process, perfected by experts after years of experiment, produces high grade pure cider that stays fresh and sweet the year 'round without the use of preservatives or other adulterations.

If you want bigger profits from your orchard write us today for the book "A Golden Harvest from Undergrade Apples." It fully describes Mount Gilead Hydraulic Cider Presses and the Mount Gilead Process—and why they are money-makers for you.

THE HYDRAULIC PRESS MFG. CO.
Originators of the Hydraulic Cider Press
805 LINCOLN AVE. MOUNT GILEAD, O.

The most complete line of machinery for fruit products plants, including cider presses for every need.



A Milker on Wheels

No installation necessary

The simple SHARPLES Moto-Milker can be unboxed and put to work for you in an hour after you receive it. Just wheel it into your barn and plug in on the lighting current. One man—or a boy—can milk 20 cows in an hour.

The Sharples Moto-Milker will pay for itself each year you operate it. It can increase your milk yield from 4% to 10%, give you cleaner milk, and cut your milking time and labor costs to one-third.

If you have a large herd, or no electricity, the Sharples Pipe Line Milker solves your problem.

Write today for free illustrated book of facts important to every owner of cows.

Dairy Conference

(Continued from page 11)

ed a study of the significance and the prices of dairy products as a factor affecting the volume of products produced by farmers and the volume of products consumed; a study of the present system of paying for milk in certain markets and its relation to the seasonal distribution of production, a study of the size, extent, and trend of the fluid milk market for a period further back and on a broader basis than has previously been available.

The Division of Statistical and Historical Research under the direction of O. C. Stine has for its function the assembling of statistics and data concerning the dairy industry, from all possible sources, and the making of this information available for use in replying to inquiries. The division further makes such analyses of the dairy industry as are essential from time to time. Maps have been prepared showing the shifts in the dairy industry from 1840 to date.

Maps and Charts Shown

The work of the various divisions was graphically presented by means of maps and charts and the delegates were impressed with the large service that is being rendered to the dairy industry by the different divisions of the Bureau of Agricultural Economics, whose work is related to the marketing of dairy products. Every courtesy was shown the delegates and many of them expressed the thought that they would return again and spend more time in getting better acquainted with the constructive lessons which may be learned in the two bureaus.

It is likely that special conferences will be held later with particular branches of the dairy industry, e. g., the ice cream makers, the market milk dealers, the butter makers, the cheese makers, and the dairy farmers. Every dairyman who can possibly take advantage of these special conferences when they are called should by all means do so, since an abundance of information of fundamental character may be secured directly at its source.—A. A. Borland.

Bradford Holstein Sale

WHILE there are many excellent herds of other breeds represented in the 60,000 dairy cattle in Bradford County, the number of Holstein breeders has been constantly increasing until now approximately 200 dairymen have registered Holsteins.

For more than twelve years Bradford County has been the leading county in Pennsylvania in its cow testing association activities. Today the result of these efforts is visible in the type and production of the dairy cattle of the county.

Use of High Quality Sires

Another feature of equal importance in the development of good herds has been use of high quality sires. While the last few years have been difficult for the dairy farmer, those who have practiced the improved methods are today able to give the public an excellent example of successful accomplishment.

For their spring sale to be held at Troy, May 15, twenty-three breeders are offering sixty-two head of registered Holsteins, all from herds under the accredited herd plan for the control of tuberculosis, and all but five head are qualified to enter accredited herds. With the cow testing association and herd sire improvement work as a foundation, this year's sale offers a consignment of cattle that will satisfy the most critical and supplies an excellent demonstration of cattle breeding skill.

On May 16th this Cow went on pasture—

These lines represent the daily average production in each 10 day period. To obtain this figure the total production in each period was divided by ten to avoid all the little fluctuations in day-to-day records.

IN THESE two simple lines is written the story of two lactations in the life of a cow. The chart shown above is a graphic record of the milk production, during 1924 and 1925, of Cow 76, an ordinary grade Holstein at the Larro Research Farm.

The solid line shows milk production in 1924—a good, even milk flow, averaging over 31 lbs. a day throughout the lactation, during which the cow was fed Larro and hay, with no pasture. On this diet, she not only produced profitably, but built condition, entering her 1925 lactation with a production up to 47 lbs. a day.

Then, on May 16th, 1925, she went on pasture, the grain ration, however, being fed with the grass. Production increased temporarily as is indicated by the sharp peak in the broken line representing 1925 milk production. This increase, however, lasted but ten days. As the grain ration was reduced, production fell off sharply.

Two months after she went on pasture she was giving only 22½ lbs. of milk a day. On the 280th day of this lactation, the milk yield was only 10 lbs., as compared with 25 lbs. on the 280th day of her previous lactation, when she was getting Larro, with no pasture.

Though the 1925 pasture was plentiful, she simply was not getting enough nourishment. The grass had served admirably as a "spring tonic," but ten days saw the end of this effect. It could not take the place of sufficient food.

"No cow can produce a really liberal amount of milk for any time on grass alone. Sometimes they will do it for a while by drawing on their reserves, which means losing weight and condition, followed with a rapid drop in milk production. Heavily milking cows so treated always disappoint their owners by their poor production the following winter."

So speaks Dr. C. H. Eckles, Chief of the Division of Dairy Husbandry at the University of Minnesota, and one of the world's leading dairy authorities.

Feed your cows 1 lb. of Larro for each 5 lbs. of milk they produce, even with the best pasture. Increase your Larro ration when pasture becomes inferior. Your summer profits will be larger. Your cows will maintain the condition necessary for capacity production next fall and winter, when milk prices are highest.

Larro

DAIRY FEED — POULTRY FEEDS — HOG FEED

For three years before Larro Poultry Feeds were offered for sale they were made to prove their right to the name Larro in a series of carefully checked feeding tests. In every test the Larro-fed birds produced more eggs and developed quicker, with less mortality than those fed on any of the better known rations now available. The regular use of Larro Poultry Feeds will add greatly to your profits, too. Ask your dealer. (627)

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

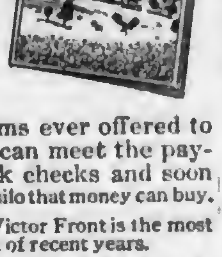
Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used for years in the big dairy country Sweden, and has cleaned up whole districts over there literally rotting with abortion. Frank Halfman, Crown Point, Ind., writes: "Two years ago, I lost every calf from my herd of forty cows. All remedies failed until I used yours. I have never lost a calf since."

C. C. C. (Cow, Calf, Control) is guaranteed to absolutely stop abortion or the treatment cost is refunded. Write today for full details explaining our free trial offer.

Simply send your name and address without further obligation on your part to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

HARDER SILOS

Are Easier To Buy



You can now buy a genuine Harder Silo on the most liberal terms ever offered to silo purchasers. You can meet the payments out of your milk checks and soon own clear and free the best silo that money can buy.

The new patented Harder-Victor Front is the most important silo improvement of recent years.

Write today for particulars of our easy-payment plan and our FREE book, "Saving with Silos." Investigate the time and labor-saving features of the new Harder-Victor Front. Learn how others are making extra profits.

McCormick-Deering—a Real High-Lift Mower?

for
Better Hay-Making

"McCormick" and "Deering" have been the names of good hay tools for generations. Throughout the country you will find sons of farmers using mowers and rakes that were used and passed on to them by their fathers. Sturdy tools yet, in spite of their twenty, thirty, and often forty years of hard work.

You may have one of these patriarchs in your implement shed. If you have, you know as well as we do the full worth of McCormick-Deering quality. However, good as the old tools were in their prime, they are relics of bygone days. The time has come to replace them with new, efficient McCormick-Deering equipment. The quality standards of today are as high as ever—the construction shows the effects of years of steady improvement. The line is unbeatable.

If you make hay you need these money-making tools. Your local McCormick-Deering dealer is at your service with a full stock of this new equipment.

RADIO DEPARTMENT

Can You Tell Me?

1. Which do you consider best the one or three-dial?
2. What is the cause of a loud hum when turning on the dry battery coming on only from below forty?
3. Should the aerial be level in the air or on a slant toward the house?
4. We are living on a side hill farm. Which way would you put your aerial, straight across the valley or the same direction as the valley? Our aerial is across the valley and is very close to a tree.
5. About how far should the aerial be from lightning rods?
6. Our lead-in wire is about ten inches from the edge of the thin roof on a bay window on the house. Would that cause any interference?
7. Our ground wire is about twenty-five feet and is fastened on an iron pipe driven in the ground about three feet in a spot in the cellar where there is water all the time. Do you think that is a good ground connection? It would take about forty-five feet to attach it to a water pipe.
8. Which do you consider the best for home use, a built-in loud speaker or a horn?—J. A. M., Delaware County, N. Y.

If You Have Questions

READERS who have problems in the operation of their radio sets are invited to write this department, care of Pennsylvania Farmer, for assistance. When you write, try to give a complete list of the ailments of your set. Describe it in detail, with names of parts and a diagram, if you made it yourself, and state just how it acts in every respect. A stamped, self-addressed envelope enclosed with your request will bring a prompt reply.

1. A three-dial set is almost always more selective (less interference) and more sensitive than a one-dial set, unless the one-dial set is the type where three internal controls are mechanically combined with one outside knob.

2. You mention a hum below forty on the dial or rheostat. With tubes too dim, a hum or oscillation is sometimes heard. If you mean below 40 on tuning dials it may arise from induction from a nearby electric power line.

3. It doesn't matter whether aerial is horizontal or vertical or at an angle. If you can increase the average height by slanting up away from house, do so.

4. Probably it would be better to run the aerial with the valley, especially if this gives greater average height from earth and avoids trees.

5. Lightning rods pick up radio energy and may weaken signals unless aerial is five to ten feet higher and not nearer than ten feet at any point.

6. No, the nearby tin roof would not cause interference; it might weaken signals slightly, so you had better increase separation to about five feet.

7. Your ground is not a good one. Bury a copper screening about two by six feet, one-quarter to one-half inch mesh, two feet below surface in cellar, where moist or wet. Solder heavy wire to one edge of screening all along for good contact. Attach another wire to the water pipe in addition.

8. The speaker may be built-in or separate—results depend mainly on nature of unit and horn used in each case. Probably a separate horn would be slightly better than the one you have if you pay more than about $30 for it.—B. F.

Transferring the Bees

THE box hive is not adapted to any of the manipulations necessary in modern beekeeping. Very little honey of poor quality, uncontrolled swarming and winter losses make box hive beekeeping unprofitable and it is often a menace to good beekeeping in the community because of the presence of American foulbrood.

By giving the bees some help they will practically transfer themselves from box hives to modern hives in one of three simple methods. One modern hive should be fitted up for each colony to be transferred, with the frames wired and filled with full sheets of brood comb foundation. The right time to transfer is when the bees are gathering sufficient nectar so that they will maintain themselves and build comb on the new foundation. Sometimes this occurs in fruit bloom but usually it is best to wait until the beginning of the main honey flow.

The Three Simple Methods

METHOD 1.—When the first swarm issues from the box hive, remove the old box to a new stand some distance away, hive the swarm in a new hive and place it on the old stand. The returning field bees will strengthen the new swarm and deplete the force in the box so that a second swarm will seldom issue.

Twenty-one days after the first swarm issued drive the remaining bees out of the old box by smoking and drumming. By this time a young queen will be laying or about ready to do so. If increase is desired this driven swarm may be hived. A good way is to kill the queen in the first swarm and unite the driven swarm with it, thus making one good strong colony having a young queen.

METHOD 2.—Remove the top board from the box hive and fit the modern hive over it like a super. Sometimes it is best to place the old box on its side in such a manner that the combs will be in a vertical position and remove the side board now on the top. This will bring the frames of foundation that are in the new hive close to the brood in the old combs and will induce quick comb building.

When Begin Storing Honey

When the bees have begun storing honey in the new hive, smoke and drum the bees from below so that most of them with the queen will be on the new combs above. Take the new modern hive off and place it on its bottom board. Remove the old box to a new location and place the modern hive on the old stand. In twenty-one days smoke and drum out the remaining bees from the old box and proceed as in method number one.

METHOD 3.—Fit the modern hive on the old box, as in method number two but instead of waiting several days for the bees to build combs, smoke and drum the bees up into the new hive at once and place it on its bottom board on the old stand. Remove the old box to a new location and in twenty-one days drive the bees from it as in the other methods.

The hive from which the bees are to be driven must have large openings at the top so that the queen and the bees will run freely up and away from the old combs into the new hive or box above. Usually a box hive having an open bottom is turned upside down and a new hive or a box is placed over the open end which is now at the top. A few cracks or small openings between it and the old hive will not matter.

By prying loose some of the boards, at what is now the bottom of the old hive to admit smoke, the operation begins. Blow quantities of cool white smoke into the openings at the bottom and pound lightly on all sides of the old hive using a light hammer or club.

Takes About Five Minutes

The bees will at once begin to roar and run upward. After about five minutes smoking and drumming the queen and most of the bees will be clustered in the new hive or box above. After that proceed as in methods two and three. The queen may not be seen in the cluster but she will be there in at least nine cases out of ten.

Within four or five days the new colony should be examined for the queen and if no eggs are found the colony should be supplied with a new queen or the old box may be drummed to find whether she is still there. If found she with a small quantity of bees, may be run into the new swarm.

In the event the box hive colony is queenless at the time of transferring, the bees should be united with another colony as they will swarm out if hived in a new hive. After the second drive of bees the combs should be taken out of the old box. Portions of good honey are good for table use or may be fed back to the new swarm. The old combs should be melted into beeswax.

If Several Colonies

If several colonies are to be transferred at the same time, it is a good plan to set four or five of the old boxes in a group and if the swarms are found to be weak, at the time of the second drive, they may all be united, making one strong colony.

Cutting the combs and fitting them into the frames of the new hive is not as good as one of the above methods. After the combs are transferred they are usually not desirable and have to be worked out later. The smear of honey often starts robbing and the loss of the colony results. If bee diseases are present this is one of the best ways to spread it. Much less care is needed and less danger of bad results follow when the bees are driven out and the combs are all new and good straight worker combs.—Geo. H. Rea.

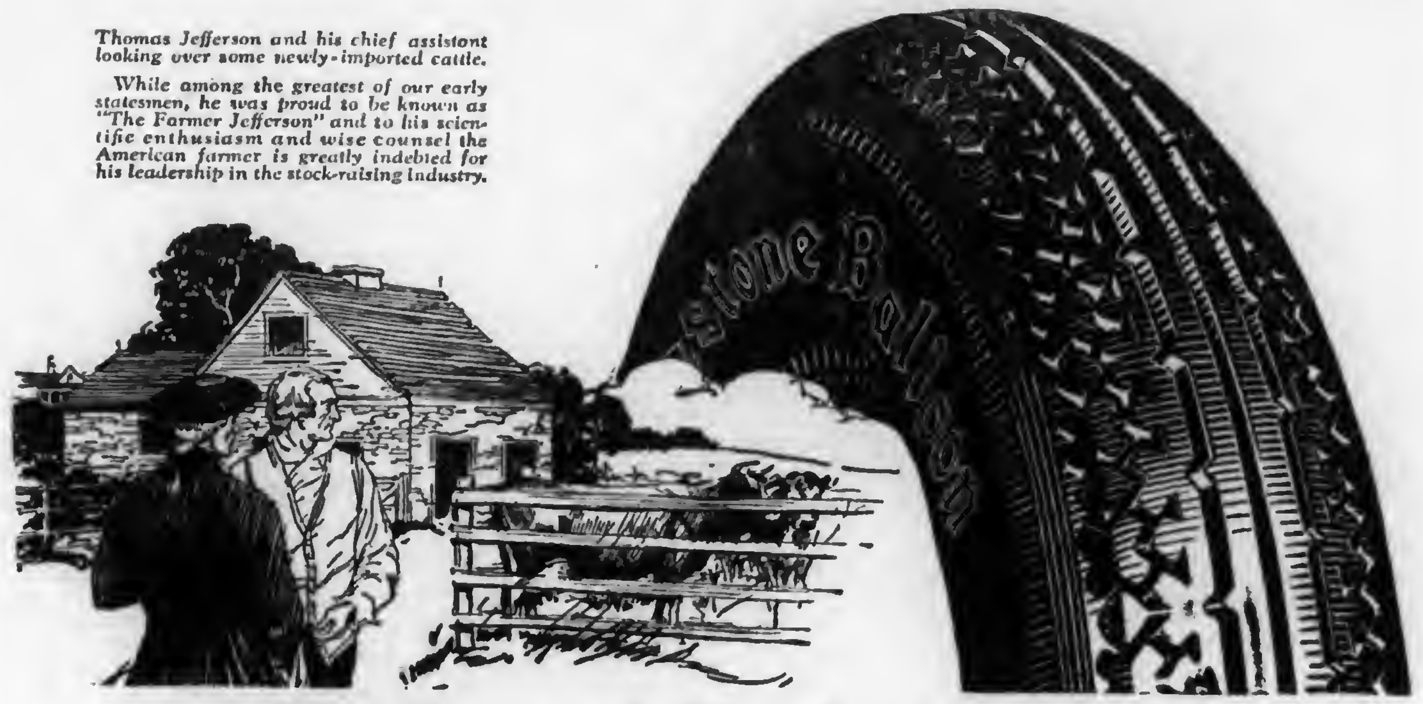
Delaware Strawberries

TWO meetings were held in Harrington, Delaware, early in April to encourage the growing of strawberries among local farmers and to make plans for a local market. This movement is being backed by the Harrington Chamber of Commerce. The county agent and the dean of the University of Delaware discussed methods of shipment, and the importance of growing two or three standard varieties and grading the fruit carefully.

Old berry growers plowed for new beds during the first week in April. Due to cold, wet weather the plants are late. There is a scarcity of plants, too, due to the drought of last year. The strawberry season will be at least two weeks later than in 1925.—G. W. MacL.

Thomas Jefferson and his chief assistant looking over some newly-imported cattle.

While among the greatest of our early statesmen, he was proud to be known as "The Farmer Jefferson" and to his scientific enthusiasm and wise counsel the American farmer is greatly indebted for his leadership in the stock-raising industry.



Pedigreed Performance

JUST as the farmer chooses his breeds of stock, for the attributes which he knows will produce desired results—so each type of Firestone Tire is built to render a special service.

Firestone Gum-Dipped Balloons are an excellent example of this—built with special care to give the needed combination of strength with flexibility to stand the extra strain of this type. The famous Firestone process of Gum-Dipping thoroughly insulates every fiber of every cord in rubber, and the tire consistently comes through with economical, comfortable performance.

It does particularly good work over the uncertain roads of spring. The broad Firestone tread passes over the bad spots and muddy places with a safe, sure hold. It easily bridges the ruts and absorbs rough stones, protecting both the car and its occupants from shocks and vibration.

Get this "pure-bred" value. Protect your car and your pocket-book with tires that have the name and reputation which you can trust. See the Firestone dealer today.

GLOBE SILOS
Merit proved by time
TWENTY years and a Globe Silo is still in service. Why? They are built of the finest materials—spruce and fir. Heavy matching walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Not only now, but a generation from now. The extension roof makes a Globe Silo the cheapest per ton capacity—an exclusive Globe feature. Increases value of farm. Durable, convenient and profitable—these are the time-proved merits of a Globe. Write today for catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.
